RECOMMENDATION STRUCTURE**

**ITU-T Recommendation Q.1210**

(Previously "CCITT Recommendation")

---

## FOREWORD

The ITU-T (Telecommunication Standardization Sector) is a permanent organ of the International Telecommunication Union (ITU). The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, establishes the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

The approval of Recommendations by the Members of the ITU-T is covered by the procedure laid down in WTSC Resolution No. 1 (Helsinki, March 1-12, 1993).

ITU-T Recommendation Q.1210 was prepared by ITU-T Study Group 11 (1993-1996) and was approved under the WTSC Resolution No. 1 procedure on the 17th of October 1995.

---

## NOTE

In this Recommendation, the expression “Administration” is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

## **SUMMARY**

A block of one hundred numbers has been set aside in the Q-Series (Q.1200-Q.1299) for the development of Intelligent Network (IN) Recommendations. Q.1210 is a new Recommendation in the IN-Series that was developed in conjunction with the IN CS-1 refinements to better align the IN CS-1 Recommendations with the overall IN CS-n Recommendation structure.

This Recommendation, the first in the IN Capability Set-1 Series, has been developed to show the organization of the IN CS-1 Recommendations in a meaningful way and to assist users in locating topics of interest. It provides a structural overview of the Q.1200-Series, IN Recommendations, as well as the content of each of the Q.1210-Series, IN CS-1 Recommendations.

Associated standards work is contained in the Q.1200-Series as well as the Q.1210-Series of IN Recommendations.

## Q.1210-SERIES INTELLIGENT NETWORK RECOMMENDATION STRUCTURE

(Geneva, 1995)

### General Q.1200-Series structure

Table 1 shows the overall Q.1200-Series Intelligent Network Recommendation structural distribution through the tens digits (1200, 1210, 1220, etc.) and the ones digits (i.e. 1201, 1202, 1203, etc.).

TABLE 1/Q.1210

#### Recommendation framework structure

00 – General	
10 – CS-1	1 – Principles introduction
20 – CS-2	2 – Service Plane (not included for CS-1)
30 – CS-3	3 – Global Functional Plane
40 – CS-4	4 – Distributed Functional Plane
50 – CS-5	5 – Physical Plane
60 – CS-6	6 – For future use
70 – CS-7	7 – For future use
80 – CS-8	8 – Interface Recommendations
90 – Glossary	9 – Intelligent Network user's guide
NOTES	
1 Recommendation Q.1200 is assigned as for the IN Recommendation framework structure.	
2 Q.1290-Series has been set aside for the glossary.	

# **Q.1210-SERIES INTELLIGENT NETWORK RECOMMENDATION STRUCTURE**

## **1 Q.1210-Series Intelligent Network Recommendation overview**

### **Q.1210 – Q-Series Intelligent Network Recommendation structure**

#### **1 Q.1210-Series Intelligent Network Recommendation overview**

### **Q.1211 – Introduction to Intelligent Network capability set-1**

- 1 Introduction
- 2 Phased standardization
- 3 General description and scope of CS-1
  - 3.1 Criteria for CS-1
  - 3.2 Evolution of CS-1
- 4 Overview of CS-1 Recommendations
- 5 Service aspects
  - 5.1 Type A and B services
  - 5.2 Target set of CS-1 service and service features
  - 5.3 Network support of CS-1 services
- 6 Network aspects
  - 6.1 Network functions
  - 6.2 Control architecture principles
  - 6.3 Feature interactions
  - 6.4 Consistency among CS-1 supported service features
- 7 Functional relationships and interfaces
  - 7.1 Reference points and identifiers for functional relationships
  - 7.2 Control classes
  - 7.3 Reference point identifiers of functional interfaces
  - 7.4 CS-1 Non-IN connection and call control
  - 7.5 CS-1 IN service control
  - 7.6 Service management for CS-1
  - 7.7 Network interworking in CS-1
  - 7.8 Summary of CS-1 functional interfaces

Annex A – Examples of relationships and mappings between services and service features

Annex B – Short prose descriptions of targeted services and service features

### **Q.1213 – Global functional plane for Intelligent Network CS-1**

- 1 General
- 2 Scope of IN global functional plane for capability set 1
- 3 References
- 4 IN CS-1 global functional plane
  - 4.1 Role of SIBs in the global functional plane
  - 4.2 Additional characteristics of a IN CS-1 SIBs
  - 4.3 CS-1 global functional plane model
  - 4.4 Terminology
- 5 IN CS-1 Service Independent Building Blocks (SIBs)
  - 5.1 Data parameters for SIBs
  - 5.2 Method to describe SIBs

- 5.3 ALGORITHM
- 5.4 AUTHENTICATE
- 5.5 CHARGE
- 5.6 COMPARE
- 5.7 DISTRIBUTION
- 5.8 LIMIT
- 5.9 LOG CALL INFORMATION
- 5.10 QUEUE
- 5.11 SCREEN
- 5.12 SERVICE DATA MANAGEMENT
- 5.13 STATUS NOTIFICATION
- 5.14 TRANSLATE
- 5.15 USER INTERACTION
- 5.16 VERIFY
- 6 Basic call process
  - 6.1 General
  - 6.2 Point of initiation and point of return
  - 6.3 BCP stage 1 description
- 7 Global service logic
  - 7.1 Relationship between GSL and BCP
  - 7.2 Relationship between global service logic and SIBs
- 8 Mapping of the service plane to the global functional plane

#### **Q.1214 – Distributed functional plane for Intelligent Network CS-1**

- 1 General
- 2 Scope of IN distributed functional plane for capability set 1
  - 2.1 End-user access
  - 2.2 Service invocation and control
  - 2.3 End-user interaction
  - 2.4 Service management
- 3 Distributed functional plane model for CS-1
  - 3.1 Explanation of diagram
  - 3.2 IN functional model
  - 3.3 Definition of Functional Entities related to IN service execution
- 4 Functional entity call/service processing models
  - 4.1 Overview
  - 4.2 SSF/CCF model
    - 4.2.1 General
    - 4.2.2 Basic Call Manager (BCM)
    - 4.2.3 IN-Switching Manager (IN-SM)
    - 4.2.4 Feature Interaction Manager (FIM)/Call Manager (CM)
    - 4.2.5 Relationship of SSF/CCF model components
    - 4.2.6 Relationship of SSF/CCF to SCF
  - 4.3 Specialized Resource Function (SRF) model
    - 4.3.1 General
    - 4.3.2 SRF components
    - 4.3.3 SRF and other entity relationships
    - 4.3.4 Objects of SRF management
  - 4.4 Service Control Function (SCF) model
    - 4.4.1 General
    - 4.4.2 SCF components
    - 4.4.3 Functional routine categories

- 4.5 Service Data Function (SDF) model
  - 4.5.1 General
  - 4.5.2 SDF components
  - 4.5.3 Data types handled by the SDF
- 5 Stage 2 description of Service Independent Building Blocks (SIBs)
  - 5.1 Introduction
    - 5.1.1 Functional model
    - 5.1.2 Description of functional entities
    - 5.1.3 Numbering of functional entity actions
    - 5.1.4 Relationship with clause 6 (Information flow descriptions)
    - 5.1.5 Organization of clause 5
    - 5.1.6 Abbreviations used in clause 5
  - 5.2 SIB stage 2 descriptions
    - 5.2.1 ALGORITHM SIB
    - 5.2.2 CHARGE SIB
    - 5.2.3 COMPARE SIB
    - 5.2.4 DISTRIBUTION SIB
    - 5.2.5 LIMIT SIB
    - 5.2.6 LOG CALL INFORMATION SIB
    - 5.2.7 QUEUE SIB
    - 5.2.8 SCREEN SIB
    - 5.2.9 SERVICE DATA MANAGEMENT SIB
    - 5.2.10 STATUS NOTIFICATION SIB
    - 5.2.11 TRANSLATE SIB
    - 5.2.12 USER INTERACTION SIB
    - 5.2.13 VERIFY SIB
    - 5.2.14 AUTHENTICATE SIB
  - 5.3 BASIC CALL PROCESS SIB
    - 5.3.1 Description
    - 5.3.2 Information flows
    - 5.3.3 SDLs
    - 5.3.4 Functional entity actions
  - 5.4 Stage 2 description of other distributed functionality
    - 5.4.1 Activity test functionality
    - 5.4.2 Call Gap capability
  - 5.5 Mapping of the global functional plane to the distributed functional plane
    - 5.5.1 Mapping of POIs and PORs to DPs and PICs
    - 5.5.2 Relating the GFP to the DFP
- 6 Relationships between FEs
  - 6.1 General
  - 6.2 Relationships
  - 6.3 Information flows between FEs
  - 6.4 SCF-SSF relationship
    - 6.4.1 General
    - 6.4.2 Information flows between SCF and SSF
    - 6.4.3 Call party handling information flows
    - 6.4.4 IE rules for SSF/CCF to SCF information flows
  - 6.5 SCF-SRF relationship
    - 6.5.1 General
    - 6.5.2 Information flows between the SCF and SRF
  - 6.6 SCF-SDF relationship
    - 6.6.1 General
    - 6.6.2 Information flows between the SCF and SDF
  - 6.7 Summary of information flows and related SIBs

Annex A – Communication between call segments

Annex B – BCSM SDL Diagrams

Appendix I – Aspects of the distributed functional plane identified as “for further study” (FFS) relative to CS-1

Appendix II – Charging scenarios examples

## **Q.1215 – Physical plane for Intelligent Network CS-1**

- 1 General
- 2 Requirements and assumptions
  - 2.1 Requirements
  - 2.2 Assumptions
- 3 Physical Entities (PEs)
- 4 Mapping requirements
- 5 Mapping the distributed functional plane to the physical plane
  - 5.1 Mapping of functional entities to physical entities
  - 5.2 Mapping FE-FE relationships to PE-PE relationships
  - 5.3 Selection of underlying protocol platforms
    - 5.3.1 SCP-SSP interface
    - 5.3.2 AD-SSP interface
    - 5.3.3 IP-SSP interface
    - 5.3.4 SN-SSP interface
    - 5.3.5 SCP-IP interface
    - 5.3.6 AD-IP interface
    - 5.3.7 SCP-SDP interface
    - 5.3.8 User interfaces

## **Q.1218 – Interface Recommendations for Intelligent Network CS-1**

- 0 Introduction
  - 0.1 Normative references
  - 0.2 Definition methodology
  - 0.3 Example physical scenarios
  - 0.4 INAP protocol architecture
  - 0.5 INAP addressing
  - 0.6 Relationship between Recommendation Q.1214 and this Recommendation
  - 0.7 Compatibility mechanisms used for INAP
- 1 SACF/MACF rules
  - 1.1 Reflection of TCAP AC
  - 1.2 Sequential/Parallel execution of operations
- 2 ASN.1 introduction
  - 2.1 SSF/SCF, SCF/SRF, SSF/SRF interfaces
    - 2.1.1 Operation types IN CS-1 operations
    - 2.1.2 Error types IN CS-1 error
    - 2.1.3 Data types IN CS-1 data types
    - 2.1.4 Operation and error codes IN CS-1 codes
    - 2.1.5 Application context
  - 2.2 SCF/SDF Interface
    - 2.2.1 Introduction to IN X.500 DAP subset
    - 2.2.2 The IN X.500 DAP subset
      - 2.2.2.1 Review of X.511 for use in the IN
      - 2.2.2.2 Directory Access Protocol Subset
      - 2.2.2.3 X.501 profile

- 2.2.2.4 Enhancements to X.500 for the support of the IN CS-1
- 2.2.2.5 ASN.1 Profile of the Directory Abstract Service for the IN CS-1

### 3 Semantics

- 3.1 Definition of procedures and entities
  - 3.1.1 SSF Application Entity procedures
  - 3.1.2 SCF Application Entity procedures
  - 3.1.3 SRF Application Entity procedures
  - 3.1.4 SDF Application Entity procedures
- 3.2 Error procedures
- 3.3 Detailed Operation procedures
- 3.4 Services assumed from TCAP

Annex A – INAP SDL diagrams

Annex B – SCSM/SDSM SDLs

Appendix I – Aspects of the Intelligent Network interface identified as “for further study” (FFS) relative to CS-1

Appendix II – Expanded ASN.1 Coding

## **Q.1219 – Intelligent Network users guide for capability set-1**

- 1 Scope
  - 1.1 Target audience
  - 1.2 Intended use
  - 1.3 Framework outline of Q.1200-Series
  - 1.4 Initial set of capabilities
  - 1.5 State of Maturity of the CS-1 Recommendations
  - 1.6 Service Decomposition for CS-1
- 2 Intelligent Network objectives
- 3 Capabilities provided by Capability Set-1
  - 3.1 Service implementation independence
  - 3.2 Multi-Vendor capability
  - 3.3 Multi-Network capability
  - 3.4 Rapid service delivery
  - 3.5 Service deployment
- 4 Service aspects for CS-1
  - 4.1 Basic Service Capabilities
  - 4.2 Type A service category
  - 4.3 Type B service category
  - 4.4 Phases of deployed services
- 5 CS-1 Architecture
  - 5.1 Functions
  - 5.2 IN CS-1 plane relationships
    - 5.2.1 IN CS-1 Service Plane
    - 5.2.2 IN CS-1 Global Functional
    - 5.2.3 IN CS-1 Distributed Functional Plane
    - 5.2.4 IN CS-1 Physical Plane
  - 5.3 Interfaces and relationships
- 6 Infrastructure in CS-1
  - 6.1 Service Independent Building Blocks (SIBs)
  - 6.2 Service logic

- 6.3 Functional Entity Call/Service Logic Processing Models
  - 6.3.1 Call Modelling for IN CS-1
  - 6.3.2 Modelling of Service Logic Processing for IN CS-1
  - 6.3.3 General considerations
- 6.4 Information flows
  - 6.4.1 Requirement for an information flow from SCF to SSF to Initiate “Call Follow-On”
- 6.5 Intelligent Network Applications Protocol (INAP)
  - 6.5.1 General ASE discussion
  - 6.5.2 General Application Context discussion
  - 6.5.3 Service Filtering
  - 6.5.4 Optional Parameters
  - 6.5.5 Considerations for the use and understanding of various operations and procedures in Recommendation Q.1218
- 6.6 Requirement on Inter-Exchange and User-Network Signalling
  - 6.6.1 General
  - 6.6.2 Interworking INAP and Network or Access Signalling
  - 6.6.3 Terminal Type and Access Type of User
  - 6.6.4 Optional Parameters in DP operations
  - 6.6.5 Miscellaneous
- 7 Service example
  - 7.1 Utilizing CS-1 capabilities
  - 7.2 Guidelines for service scenarios
  - 7.3 Format for service scenarios
- 8 Physical deployment scenarios
  - 8.1 Mapping FEs to PEs
  - 8.2 Mapping of FE-FE relationships to PE-PE relationships
- 9 Future IN Capability Sets
  - 9.1 Generic plans
  - 9.2 “Stretch forward/ease back”
  - 9.3 Evolvable capabilities
  - 9.4 Evolvability concepts

Annex A – IN CS-1 Service Scenario Examples

Annex B – BCSM SDLs
