ITU-T RECOMMENDATION X.484

MESSAGE HANDLING SYSTEMS – P7 PROTOCOL PICS PROFORMA

Summary

This Recommendation provides the Protocol Implementation Conformance Statement (PICS) proforma for the Message Handling Systems (MHS) P7 protocol (MS 88 Access and MS 94 Access) specified in ITU-T Rec. X.413 | ISO/IEC 10021-5 and ITU-T Rec. X.419 | ISO/IEC 10021-6. The PICS proforma presents in tabular form the mandatory and optional elements of the P7 protocol.

Source

ITU-T Recommendation X.484 was revised by ITU-T Study Group 7 (1997-2000) and was approved under the WTSC Resolution No. 1 procedure on the 25th of September 1998.

As a result of Study Group 7 decision (18th of June 1999) to publish a consolidated new edition of the set of Message Handling Recommendations, it was decided that, in agreement with the TSB Director, X.481, X.482, X.483, X.484 and X.486 will also be published with 1999 dates.

FOREWORD

ITU (International Telecommunication Union) is the United Nations Specialized Agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the ITU. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, establishes the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

The approval of Recommendations by the Members of the ITU-T is covered by the procedure laid down in WTSC Resolution No. 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation the term *recognized operating agency (ROA)* includes any individual, company, corporation or governmental organization that operates a public correspondence service. The terms *Administration*, *ROA* and *public correspondence* are defined in the *Constitution of the ITU (Geneva, 1992)*.

INTELLECTUAL PROPERTY RIGHTS

The ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. The ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, the ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

Annex C – Amendments and corrigenda	71

Introduction

This Recommendation is one in a set of Recommendations defining Message Handling in a distributed open system environment.

Message Handling provides for the exchange of messages between users on a store-and-forward basis. A message submitted by one user (the originator) is transferred through the Message Transfer System (MTS) and delivered to one or more users (the recipients). The MTS comprises a number of Message Transfer Agents (MTAs), which transfer messages and deliver them to their recipients.

To evaluate the capabilities of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a given OSI protocol. Such statement is called a Protocol Implementation Conformance Statement (PICS).

MESSAGE HANDLING SYSTEMS – P7 PROTOCOL PICS PROFORMA¹

1 Scope

This Recommendation provides the Protocol Implementation Conformance Statement (PICS) proforma for the P7 protocol specified in ITU-T Rec. X.413 | ISO/IEC 10021-5 and ITU-T Rec. X.419 | ISO/IEC 10021-6. The PICS proforma presents in tabular form the mandatory and optional elements of the P7 protocol. Two PICS proformas are provided. Annex A is the PICS proforma for Message Store Access for the 1994 and subsequent versions of the MHS Recommendations | International Standards. Annex B is the PICS proforma for Message Store Access for the 1988 version of the MHS Recommendations | International Standards.

This PICS proforma is based on the relevant guidance for PICS proformas given in ITU-T Rec. X.296 | ISO/IEC 9646-7.

2 Normative references

The following Recommendations and International Standards contain provisions which, through reference in this text, constitute provisions of this Recommendation | International Standard. At the time of publication, the editions indicated were valid. All Recommendations and Standards are subject to revision, and parties to agreements based on this Recommendation | International Standard are encouraged to investigate the possibility of applying the most recent edition of the Recommendations and Standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards. The Telecommunication Standardization Bureau of the ITU maintains a list of currently valid ITU-T Recommendations.

2.1 Identical Recommendations | International Standards

- ITU-T Recommendation X.402 (1999) | ISO/IEC 10021-2:1999, *Information technology – Message Handling Systems (MHS): Overall architecture*.
- ITU-T Recommendation X.413 (1999) | ISO/IEC 10021-5:1999, *Information technology – Message handling systems: Message store – Abstract service definition*.
- ITU-T Recommendation X.419 (1999) | ISO/IEC 10021-6:1999, *Information technology – Message Handling Systems (MHS): Protocol specifications*.

2.2 Paired Recommendations | International Standards equivalent in technical content

- ITU-T Recommendation X.290 (1995), *OSI conformance testing methodology and framework for protocol Recommendations for ITU-T applications – General concepts*.
ISO/IEC 9646-1:1994, *Information technology – Open Systems Interconnection – Conformance testing methodology and framework – Part 1: General concepts*.
- ITU-T Recommendation X.296 (1995), *OSI conformance testing methodology and framework for protocol Recommendations for ITU-T applications – Implementation conformance statements*.

¹ Annex A in this Recommendation is technically aligned with Annex A in ISO/IEC ISP 10611-6, Information technology – International Standardized Profiles AMH1n – Message Handling Systems – Common Messaging – Part 6: AMH15 – MS 94 Access (P7). Annex B in this Recommendation is technically aligned with Annex A in ISO/IEC ISP 10611-5, Information technology – International Standardized Profiles AMH1n – Message Handling Systems – Common Messaging – Part 5: AMH13 – MS Access (P7).

3 Definitions

Terms used in this Recommendation are defined in the referenced Recommendations | International Standards.

4 Abbreviations

This Recommendation uses the following abbreviations:

ISP	International Standardized Profile
MHS	Message Handling Systems
MS	Message Store
MTA	Message Transfer Agent
OSI	Open Systems Interconnection
PDU	Protocol Data Unit
PICS	Protocol Implementation Conformance Statement
UA	User Agent

5 Conformance

A conforming PICS proforma shall be technically equivalent to the text of the PICS proforma in this Recommendation and shall preserve the numbering and ordering of items in the PICS proforma in this Recommendation.

A PICS which conforms to this Recommendation shall:

- a) describe an implementation which conforms to either the 1994 or 1988 application context defined in ITU-T Rec. X.413 | ISO/IEC 10021-5 and ITU-T Rec. X.419 | ISO/IEC 10021-6;
- b) be a conforming PICS proforma, which has been completed in accordance with the instructions for completion given in Annex A or Annex B, as appropriate;
- c) include the information necessary to uniquely identify both the supplier and the implementation.

Annex A²

PICS Proforma for MS 94 Access (P7)

(This annex forms an integral part of this Recommendation)

A.3.6 Support of attributes by the MS-user	39

Subclause A.1 specifies the basic requirements for conformance to this Recommendation. Subclause A.2 is allocated but not used, it is present to keep the numbering alignment with the corresponding ISP. Subclause A.3 allows additional information to be provided for certain aspects of an implementation where no specific requirements are included in the base specifications. All subclauses shall be completed as appropriate.

NOTE – The numbering of subclauses and items in this annex is identical to that in ISO/IEC ISP 10611-6, "Information technology – International Standardized Profiles AMH1n – Message Handling Systems – Common Messaging – Part 6: AMH15 – MS 94 Access (P7)".

² Copyright release for PICS proformas

Users of this Recommendation may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

A.0 Instructions and identification

A.0.1 Instructions

A.0.1.1 Purpose of the proforma

The purpose of the PICS proforma is to provide suppliers of implementations of the P7 protocol with a consistent means of stating which proforma has been implemented.

The proforma is in the form of a questionnaire and consists of a set of items. An item is provided for each capability for which an implementation choice is allowed. Items are also provided for mandatory capabilities for which no implementation choice is allowed. Each item includes an item number, an item description, a status value specifying the support requirement, and room for a support answer to be provided by the supplier.

A.0.1.2 Item numbering

Each line in the PICS proforma which requires implementation detail to be entered is given a number in the first column. The item number column provides a means of uniquely referencing each possible answer within the PICS proforma.

A.0.1.3 Base column

In each table, the "Base" column reflects the level of support required for conformance to the base standard.

The following classifications are used in this PICS to specify static conformance requirements – i.e. capability.

NOTE – The Profile column is used for functional profiles and uses the same classification.

In the case of protocol elements, the classification is relative to that of the containing element, if any. Where the constituent elements of a non-primitive element are not individually specified, then each shall be considered to have the classification of that element. Where the range of values to be supported for an element is not specified, then all values defined in the MHS base standards shall be supported.

mandatory support (m): The element or feature shall be fully supported. An implementation shall be able to generate the element, and/or receive the element and perform all associated procedures (i.e. implying the ability to handle both the syntax and the semantics of the element) as relevant, as specified in the MHS base standards. Where support for origination (generation) and reception are not distinguished, then both capabilities shall be assumed. Mandatory support of an MS attribute for the MS requires that it is supported in the context of all applicable supported operation arguments and results and also for use within a selector to the level of support claimed for the filter item. Mandatory support of an MS attribute by the MS-user requires that it is supported in the context of at least one supported operation argument and result or supported in a selector to the level of support claimed for the filter item (see table in A.3.6). The way in which attribute values are stored by an MS implementation, or used by an MS-user implementation, is otherwise a local matter.

optional support (o): An implementation is not required to support the element or feature. If support is claimed, the element shall be treated as if it were specified as mandatory support. If support is not claimed, and the element is an argument, then an implementation shall generate an appropriate error indication if the element is received. If support is not claimed, and the element is a result, then an implementation may ignore the element if it is received. If support of an operation as a responder is not claimed, then an appropriate error indication shall be generated (as a minimum, a ROSE reject shall be generated).

conditional support (c): The element shall be supported under the conditions specified in this Recommendation. If these conditions are met, the element shall be treated as if it were specified as mandatory support. If these conditions are not met, the element shall be treated as if it were specified as optional support (unless otherwise stated).

out of scope (i): The element is outside the scope of this Recommendation – i.e. it will not be the subject of a conformance test.

not applicable (–): The element is not applicable in the particular context in which this classification is used.

A.0.1.4 Support column

The "Support" column is provided for completion by the supplier of the implementation as follows:

Y The element or feature is fully supported (i.e. satisfying the requirements of the m support classification).

- N The element or feature is not supported, further qualified to indicate the action taken on receipt of such an element as follows:
 ND – the element is discarded/ignored;
 NR – the PDU is rejected (with an appropriate error indication where applicable).
– or blank The element or feature is not applicable (i.e. a major feature or composite protocol element which includes this element or feature is not supported or is minimally supported).

A.0.1.5 References column

The "References" column is provided for cross-referencing purposes. The notation employed for references also indicates composite elements which contain sub-elements (a sub-element reference is prefixed by the reference of the composite element).

A reference to a specific item is specified by the following sequence:

- if the reference is to an item in another document, then the reference starts with unambiguous identifier for that document;
- the number of the subclause enclosing the table, or the number of the table if they are numbered;
- a solidus character "/";
- the item number, to identify the row in which the answer appears.

A.0.2 Identification of PICS proforma corrigenda

The supplier of the PICS proforma shall identify any corrigenda that have been applied (i.e. Technical Corrigendum or equivalent) to the published proforma. Suppliers of the proforma should modify the proforma, or attach relevant additional pages in order to apply the corrigenda and then record the application of the corrigenda in the table below.

32	valueCountMatch	o		o			
NOTE – This matching-rule is not used in any attribute and is merely defined for the purpose of reference in the definition of other matching-rules.							

A.2 Optional functional groups

Not applicable for the base standard PICS.

NOTE – The numbering of subclauses and items in this annex is identical to that in ISO/IEC ISP 10611-6.

A.3 Additional information

A.3.1 Content types supported

The following table shall be completed to indicate (Y or ✓) which content type(s) the implementation can support on submission and on retrieval.

If support on retrieval is claimed, then support of MS attributes may also be claimed by so indicating (Y or ✓) in the "Supported Attributes" column. A claim of support of MS attributes means that any mandatory requirements in the relevant content type-specific base standards for support of MS attributes are met.

Ref.	Content Type	Supported		Supported Attributes	Comments
		Submission	Retrieval		
1	built-in			–	
1.1	unidentified (0)			–	
1.2	interpersonal-messaging (2) (see Notes)				
1.3	interpersonal-messaging (22) (see Notes)				
1.4	(EDI messaging) (35)				
2	extended (specify)				

NOTE 1 – The IPM subject attribute shall be supported, in addition to the IPM specific base standard support requirements of MS attributes.

NOTE 2 – A system which only supports content type interpersonal-messaging(2) without interpersonal-messaging(22) and which makes use of a MS is not a scenario described in the base standard and shall be avoided.

A.3.2 Encoded information types supported

The following table shall be completed to indicate (Y or ✓) which encoded information type(s) the implementation can support on submission and on retrieval.

Ref.	Encoded Information Type	Supported		Comments
		Submission	Retrieval	
1	built-in			
1.1	undefined (0)			
1.2	ia5-text (2)			
1.3	g3-facsimile (3)			
1.4	g4-class-1 (4)			
1.5	teletex (5)			
1.6	videotex (6)			
1.7	mixed-mode (9)			
1.8	other (specify)			
2	extended (specify)			

A.3.3 Support of additional extensions

The following table shall be completed to indicate which extensions are supported in addition to the standard extensions for which support must already be stated in the various tables of Clauses A.1 and A.2.

Ref.	Extension identifier	Comments

A.3.4 Support of filter

The following table shall be completed to indicate any constraints on the support of filter.

Ref.	Constraint	Value	Comments
1	Maximum number of levels of recursion/nesting of filter supported		
2	Maximum number of elements that can be logically combined at any one level		

A.3.5 Implementation constraints

The following table shall be completed to indicate any constraints imposed by the implementation.

Ref.	Constraint	Limit	Comments
1	limit on message size (if any) (Note 1)		
2	limit on the number of recipients that may be specified in a message envelope (if any) (Note 2)		
3	other (specify)		

NOTE 1 – Any limit on the maximum size of message content and/or envelope shall be stated.

NOTE 2 – Any limit on the number of recipients that may be specified in a message envelope shall be stated (this does not imply a static capability to register that number of users for delivery at a single MTA).

A.3.6 Support of attributes by the MS-user

The following tables shall be completed for the MS-user to indicate, for each supported MS attribute, all the operations, arguments, results and filter items for which the attribute is supported.

A.3.6.1 Support in the Stored-message subordinate entry-classes

B.3.5 Support of attributes by the MS-user	69
B.3.6 Supported extensions	70

Subclause B.1 specifies the basic requirements for conformance to this Recommendation. Subclause B.2 is allocated but not used, it is present to keep the numbering alignment with the corresponding ISP. Subclause B.3 allows additional information to be provided for certain aspects of an implementation where no specific requirements are included in the base specifications. All subclauses shall be completed as appropriate.

NOTE – The numbering of subclauses and items in this annex is identical to that in ISO/IEC 10611-5, "Information technology – International Standardized Profiles AMH1n – Message Handling Systems – Common Messaging – Part 5: AMH13 - MS Access (P7)".

³ Copyright release for PICS proformas

Users of this Recommendation may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

B.0 Instructions and identification

B.0.1 Instructions

B.0.1.1 Purpose of the proforma

The purpose of the PICS proforma is to provide suppliers of implementations of the P7 protocol with a consistent means of stating which proforma has been implemented.

The proforma is in the form of a questionnaire and consists of a set of items. An item is provided for each capability for which an implementation choice is allowed. Items are also provided for mandatory capabilities for which no implementation choice is allowed. Each item includes an item number, an item description, a status value specifying the support requirement, and room for a support answer to be provided by the supplier.

B.0.1.2 Item numbering

Each line in the PICS proforma which requires implementation detail to be entered is given a number in the first column. The item number column provides a means of uniquely referencing each possible answer within the PICS proforma.

B.0.1.3 Base column

In each table, the "Base" column reflects the level of support required for conformance to the base standard.

The following classifications are used in this PICS to specify static conformance requirements – i.e. capability.

NOTE – The Profile column is used for functional profiles and uses the same classification.

In the case of protocol elements, the classification is relative to that of the containing element, if any. Where the constituent elements of a non-primitive element are not individually specified, then each shall be considered to have the classification of that element. Where the range of values to be supported for an element is not specified, then all values defined in the MHS base standards shall be supported.

mandatory support (m): The element or feature shall be fully supported. An implementation shall be able to generate the element, and/or receive the element and perform all associated procedures (i.e. implying the ability to handle both the syntax and the semantics of the element) as relevant, as specified in the MHS base standards. Where support for origination (generation) and reception are not distinguished, then both capabilities shall be assumed. Mandatory support of an MS attribute for the MS requires that it is supported in the context of all applicable supported operation arguments and results and also for use within a selector to the level of support claimed for the filter item. Mandatory support of an MS attribute by the MS-user requires that it is supported in the context of at least one supported operation argument and result or supported in a selector to the level of support claimed for the filter item (see table in B.3.5). The way in which attribute values are stored by an MS implementation, or used by an MS-user implementation, is otherwise a local matter.

optional support (o): An implementation is not required to support the element or feature. If support is claimed, the element shall be treated as if it were specified as mandatory support. If support is not claimed, and the element is an argument, then an implementation shall generate an appropriate error indication if the element is received. If support is not claimed, and the element is a result, then an implementation may ignore the element if it is received. If support of an operation as a responder is not claimed, then an appropriate error indication shall be generated (as a minimum, a ROSE reject shall be generated).

conditional support (c): The element shall be supported under the conditions specified in this Recommendation. If these conditions are met, the element shall be treated as if it were specified as mandatory support. If these conditions are not met, the element shall be treated as if it were specified as optional support (unless otherwise stated).

out of scope (i): The element is outside the scope of this Recommendation – i.e. it will not be the subject of a conformance test.

not applicable (-): The element is not applicable in the particular context in which this classification is used.

B.0.1.4 Support column

The "Support" column is provided for completion by the supplier of the implementation as follows:

- Y The element or feature is fully supported (i.e. satisfying the requirements of the m support classification).
- N The element or feature is not supported, further qualified to indicate the action taken on receipt of such an element as follows:
 - ND – the element is discarded/ignored;
 - NR – the PDU is rejected (with an appropriate error indication where applicable).

- or blank The element or feature is not applicable (i.e. a major feature or composite protocol element which includes this element or feature is not supported or is minimally supported).

B.0.1.5 References column

The "References" column is provided for cross-referencing purposes. The notation employed for references also indicates composite elements which contain sub-elements (a sub-element reference is prefixed by the reference of the composite element).

A reference to a specific item is specified by the following sequence:

- if the reference is to an item in another document, then the reference starts with unambiguous identifier for that document;
- the number of the subclause enclosing the table, or the number of the table if they are numbered;
- a solidus character "/";
- the item number, to identify the row in which the answer appears.

B.0.2 Identification of PICS proforma corrigenda

The supplier of the PICS proforma shall identify any corrigenda that have been applied (i.e. Technical Corrigendum or equivalent) to the published proforma. Suppliers of the proforma should modify the proforma, or attach relevant additional pages in order to apply the corrigenda and then record the application of the corrigenda in the table below.

Corrigenda to ITU-T Recommendation X.484

B.0.3.4 Identification of protocol

Ref.	Question	Response
1	Title, reference number and date of publication of the protocol standard	
2	Protocol version(s)	1988 version
3	Addenda/amendments/corrigenda implemented	
4	MHS Implementors' Guide version implemented	

B.0.3.5 Type of implementation

Ref.	Implementation Type	Response
1	MS-user (UA)	
2	MS (co-located with MTA)	
3	MS (P3 interface to MTA)	

NOTE – A separate PICS shall be completed for each implementation type for which conformance is claimed.

B.0.3.6 Global statement of conformance

Ref.	Question	Response
1	Are all mandatory base standards requirements implemented?	

B.1 Basic requirements

B.1.1 Supported application contexts

Ref.	Application Context	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	ms-access	m		m			
2	ms-reliable-access	o		o			

B.1.2 Supported operations

B.1.2.1 Bind and Unbind

Ref.	Operation	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	MSBind	m		m			see B.1.3.1
2	MSUnbind	m		m			

B.1.2.2 Message Submission Service Element (MSSE)

Ref.	Operation	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	MessageSubmission	m		m			see B.1.3.2
2	ProbeSubmission	o		m			see B.1.3.3
3	CancelDeferredDelivery	o		m			see B.1.3.4
4	SubmissionControl	o		o			see B.1.3.5

B.1.2.3 Message Retrieval Service Element (MRSE)

Ref.	Operation	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	Summarize	o		m			see B.1.3.6
2	List	o		m			see B.1.3.7
3	Fetch	m		m			see B.1.3.8
4	Delete	m		m			see B.1.3.9
5	Register-MS	o		m			see B.1.3.10
6	Alert	o		o			see B.1.3.11

B.1.2.4 Message Administration Service Element (MASE)

Ref.	Operation	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	Register	o		o			see B.1.3.12
2	ChangeCredentials (MTA to MS)	—		o			see B.1.3.13
3	ChangeCredentials (MS-user to MTA via MS)	o		o			see B.1.3.13

NOTE 1 – The first edition of the base standard erroneously defines the ChangeCredentials (MTA to UA) operation in the context of P7. It is removed in the second and subsequent editions of the base standard.

NOTE 2 – For an MS-user, some or all of the services and functionality supported by these operations may be implemented by other means as a local matter.

6	directory-name	o		o			

The following tables shall be completed according to the OR-address forms for which support is claimed above.

B.1.10.3 Mnemonic OR-address

Ref.	Element	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	built-in-standard-attributes	m		m			
1.1	country-name	m		m			
1.2	administration-domain-name	m		m			
1.3	private-domain-name	o		m			
1.4	organization-name	o		m			
1.5	personal-name	o		m			
1.5.1	surname	m		m			
1.5.2	given-name	o		m			
1.5.3	initials	o		m			
1.5.4	generation-qualifier	o		m			
1.6	organizational-unit-names	o		m			
2	built-in-domain-defined-attributes	o		c ¹			
3	extension-attributes	o		m			
3.1	common-name	o		m			
3.2	teletex-common-name	o		m			
3.3	universal-common-name	o		m			see B.1.10.8
3.4	teletex-organization-name	o		m			
3.5	universal-organization-name	o		m			see B.1.10.8
3.6	teletex-personal-name	o		m			
3.6.1	surname	m		m			
3.6.2	given-name	o		m			
3.6.3	initials	o		m			
3.6.4	generation-qualifier	o		m			
3.7	universal-personal-name	o		m			
3.7.1	surname	m		m			see B.1.10.8
3.7.2	given-name	o		m			see B.1.10.8
3.7.3	initials	o		m			see B.1.10.8
3.7.4	generation-qualifier	o		m			see B.1.10.8
3.8	teletex-organizational-unit-names	o		m			
3.9	universal-organizational-unit-names	o		m			see B.1.10.8
3.10	teletex-domain-defined-attributes	o		c ¹			
3.11	universal-domain-defined-attributes	o		c ¹			see B.1.10.8

1 if the mnemonic OR-address form is considered in the context of local MS-user identification then o else m

B.1.10.4 Numeric OR-address

Ref.	Element	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	built-in-standard-attributes	m		m			
1.1	country-name	m		m

47	subject-submission-identifier	o		m			
48	this-recipient-name	o		o			
49	trace-information	o		o			

B.1.12 Auto-actions

Ref.	Element	MS-user		MS		Support	Notes/References
		Base	Profile	Base	Profile		
1	auto-forward	o		o			see B.1.6
2	auto-alert	o		o			see B.1.7
3	other-auto-actions:	o		o			

B.2 Optional functional groups

Not applicable for the base standard PICS.

NOTE – The numbering of subclauses and items in this annex is identical to that in ISO/IEC ISP 10611-5.

B.3 Additional information

B.3.1 Content types supported

The following table shall be completed to indicate (Y or ✓) which content type(s) the implementation can support on submission and on retrieval.

If support on retrieval is claimed, then support of MS attributes may also be claimed by so indicating (Y or ✓) in the "Supported Attributes" column. A claim of support of MS attributes means that any mandatory requirements in the relevant content-type-specific base standards for support of MS attributes are met.

Ref.	Content Type	Supported		Supported Attributes	Comments
		Submission	Retrieval		
1	built-in			—	
1.1	unidentified (0)			—	
1.2	interpersonal-messaging-1984 (2)			—	
1.3	interpersonal-messaging-1988 (22) (see Notes)				
1.4	(EDI messaging) (35)				
2	extended (specify)				

NOTE 1 – The IPM Subject attribute shall be supported, in addition to the IPM specific base standard support requirements of MS attributes.

NOTE 2 – A system which only supports content type interpersonal-messaging (2) without interpersonal-messaging (22) and which makes use of a MS is not a scenario described in the base standard, and shall be avoided.

B.3.2 Encoded information types supported

The following table shall be completed to indicate (Y or ✓) which encoded information type(s) the implementation can support on submission and on retrieval.

Ref.	Encoced Information Type	Supported		Comments
		Submission	Retrieval	
1	built-in			
1.1	undefined (0)			
1.2	ia5-text (2)			
1.3	g3-facsimile (3)			
1.4	g4-class-1 (4)			
1.5	teletex (5)			
1.6	videotex (6)			
1.7	voice (7)			
1.8	mixed-mode (9)			
1.9	other (specify)			
2	extended (specify)			

B.3.3 Support of filter

The following table shall be completed to indicate any constraints on the support of filter.

Ref.	Constraint	Value	Comments
1	Maximum number of levels of recursion/nesting of filter supported		
2	Maximum number of elements that can be logically combined at any one level		

B.3.4 Implementation constraints

The following table shall be completed to indicate any constraints imposed by the implementation.

Ref.	Constraint	Limit	Comments
1	limit on message size (if any) (see Note 1)		
2	limit on the number of recipients that may be specified in a message envelope (if any) (see Note 2)		
3	other (specify)		

NOTE 1 – Any limit on the maximum size of message content and/or envelope shall be stated.
 NOTE 2 – Any limit on the number of recipients that may be specified in a message envelope shall be stated (this does not imply a static capability to register that number of users for delivery at a single MTA).

B.3.5 Support of attributes by the MS-user

The following table shall be completed for the MS-user to indicate, for each supported MS attribute, all the operations, arguments, results and filter items for which the attribute is supported.

Ref.	Attribute	Comments
1	certificate-selectors	
2	child-sequence-numbers	
3	content	
4	content-confidentiality-algorithm-identifier	
5	content-correlator	
6	content-identifier	
7	content-integrity-check	
8	content-length	
9	content-returned	
10	content-type	
11	conversion-with-loss-prohibited	
12	converted-EITs	
13	creation-time	
14	delivered-EITs	
15	delivery-flags	
16	dl-exempted-recipients	
17	dl-expansion-history	
18	entry-type	
19	internal-trace-information	
20	message-delivery-envelope	
21	message-delivery-time	
22	message-identifier	
23	message-origin-authentication-check	
24	message-security-label	
25	message-submission-time	
26	message-token	
27	multiple-originator-certificates	
28	original-EITs	

Ref.	Attribute	Comments
29	originally-intended-recipient-name	
30	originator-certificate	
31	originator-name	
32	other-recipient-names	
33	parent-sequence-number	
34	per-recipient-report-delivery-fields	
35	priority	
36	proof-of-delivery-request	
37	recipient-certificate	
38	redirection-history	
39	report-delivery-envelope	
40	report-origin-authentication-check	
41	reporting-DL-name	
42	reporting-MTA-certificate	
43	retrieval-status	
44	security-classification	
45	sequence-number	
46	signature-verification-status	
47	subject-submission-identifier	
48	this-recipient-name	
49	trace-information	

B.3.6 Supported extensions

The following table shall be completed to indicate which extensions and where they are supported in addition to the standard extensions for which support must already be stated in the various tables of clauses B.1 and B.2. For each extension it shall be references to where in the protocol they might appear.

Ref.	Extension identifier	Comments

Annex C

Amendments and corrigenda

(This annex forms an integral part of this Recommendation)

Recommendations and International Standards are subject to constant review and revision by ITU-T and ISO/IEC. The following amendments and corrigenda are approved by ITU-T and ISO/IEC and are considered as normative references in this Recommendation.

None.

ITU-T RECOMMENDATIONS SERIES

Series A	Organization of the work of the ITU-T
