## **PREFACIO**

La UIT (Unión Internacional de Telecomunicaciones) es el organismo especializado de las Naciones Unidas en el campo de las telecomunicaciones. El UIT-T (Sector de Normalización de las Telecomunicaciones de la UIT) es un órgano permanente de la UIT. En el UIT-T, que es la entidad que establece normas mundiales (Recomendaciones) sobre las telecomunicaciones, participan unos 179 países miembros, 84 empresas de explotación de telecomunicaciones, 145 organizaciones científicas e industriales y 38 organizaciones internacionales.

Las Recomendaciones las aprueban los Miembros del UIT-T de acuerdo con el procedimiento establecido en la Resolución N.º 1 de la CMNT (Helsinki, 1993). Adicionalmente, la Conferencia Mundial de Normalización de las Telecomunicaciones (CMNT), que se celebra cada cuatro años, aprueba las Recomendaciones que para ello se le sometan y establece el programa de estudios para el periodo siguiente.

En ciertos sectores de la tecnología de la información que corresponden a la esfera de competencia del UIT-T, se preparan las normas necesarias en colaboración con la ISO y la CEI. El texto de la Recomendación UIT-T X.582 se aprobó el 21 de noviembre de 1995. Su texto se publica también, en forma idéntica, como Norma Internacional ISO/CEI 14608-2.

---

## **NOTA**

En esta Recomendación, la expresión «Administración» se utiliza para designar, en forma abreviada, tanto una administración de telecomunicaciones como una empresa de explotación reconocida de telecomunicaciones.

RECOMENDACIONES UIT-T DE LA SERIE X

## Resumen

Esta Recomendación | Norma Internacional contiene el formulario de declaración de conformidad de implementación de protocolo (PICS) para el protocolo de sistema de directorio especificado en las Recomendaciones de la serie X.500 de 1988. El formulario PICS presenta en forma tabular los elementos obligatorios y facultativos del protocolo de sistema de directorio.

## Introducción

Esta Recomendación | Norma Internacional, junto con las otras de la misma serie, ha sido elaborada para facilitar la interconexión de sistemas de procesamiento de información para la prestación de servicios de directorio. El conjunto de todos estos sistemas, junto con la información de directorio que contienen, puede considerarse como un todo integrado, denominado el **directorío**. La información contenida en el directorio, denominada en forma colectiva base de información de directorio (DIB, *directory information base*), se utiliza por lo general para facilitar la comunicación entre, con o sobre objetos tales como entidades de aplicación, personas, terminales y listas de distribución.

El directorio desempeña un cometido importante en la interconexión de sistemas abiertos (OSI, *open systems interconnection*), cuyo propósito es permitir, con un mínimo de acuerdos técnicos fuera de las propias normas de interconexión, la interconexión de sistemas de procesamiento de información:

- de diferentes fabricantes;
- sometidos a gestiones diferentes;
- de diferentes grados de complejidad; y
- de diferentes fechas de construcción.

Para evaluar la conformidad de una implementación es necesario disponer de una declaración sobre las capacidades y opciones utilizadas para un protocolo OSI. Dicha declaración se denomina enunciado de conformidad de implementación de protocolo (PICS, *protocol implementation conformance statement*).

Esta Recomendación | Norma Internacional especifica el formulario de PICS para el protocolo de sistema de directorio, como se define en las Recs. de la serie X.500 (1988) del CCITT | ISO/CEI 9594:1990.

**NORMA INTERNACIONAL**

**TECNOLOGÍA DE LA INFORMACIÓN – INTERCONEXIÓN DE SISTEMAS  
ABIERTOS – EL DIRECTORIO: PROTOCOLO DE SISTEMA  
DE DIRECTORIO – FORMULARIO DE ENUNCIADO  
DE CONFORMIDAD DE IMPLEMENTACIÓN  
DE PROTOCOLO**

**1 Alcance**

La presente Recomendación | Norma Internacional proporciona el formulario de enunciado de conformidad de implementación de protocolo (PICS) para el protocolo de sistema de directorio especificado en las Recs. de la serie X.500 del CCITT (1988) | ISO/CEI 9594:1990. Este formulario PICS se ajusta a los requisitos pertinentes y a las directrices aplicables indicadas en la Rec. UIT-T X.296 | ISO/CEI 9646-7. En esta Recomendación | Norma Internacional se dan detalles sobre la manera de utilizar este formulario.

El proveedor de una implementación que alega conformarse con las Recs. de la serie X.500 del CCITT | ISO/CEI 9594 tiene que llenar un ejemplar del formulario PICS que figura en el Anexo A y proporcionar la información necesaria para identificar tanto al proveedor como a la implementación.

Este formulario PICS se aplica a un agente de sistema de directorio (DSA, *directory system agent*) que coopera.

**2 Referencias normativas**

Las siguientes Recomendaciones | Normas Internacionales contienen disposiciones que, mediante su referencia en este texto, constituyen disposiciones de la presente Recomendación | Norma Internacional. Al efectuar esta publicación, estaban en vigor las ediciones indicadas. Todas las Recomendaciones y Normas son objeto de revisiones, por lo que se preconiza que los participantes en acuerdos basados en la presente Recomendación | Norma Internacional investiguen la posibilidad de aplicar la edición más reciente de las Recomendaciones y Normas citadas a continuación. Los miembros de la CEI y de la ISO mantienen registros de las Normas Internacionales actualmente vigentes. La Oficina de Normalización de las Telecomunicaciones de la UIT mantiene una lista de las Recomendaciones UIT-T actualmente vigentes.

**2.1 Recomendaciones | Normas Internacionales idénticas**

### 3 Definiciones

A los efectos de la presente Recomendación | Norma Internacional, se aplican las siguientes definiciones.

Los siguientes términos definidos en la Rec. UIT-T X.290 | ISO/CEI 9646-1:

- a) enunciado de conformidad de realización;
- b) formulario de enunciado de conformidad de realización;
- c) enunciado de conformidad de realización de protocolo (PICS); y
- d) formulario PICS.

#### Términos adicionales:

- a) *DSA cooperante*: un DSA que tiene la capacidad de utilizar el protocolo de sistema de directorio.
- b) *Nivel de seguridad*: se declararán niveles de seguridad para la autenticación de la entidad par, la autenticación del originador y la autenticación de los resultados, respectivamente.
  - Para la autenticación de la entidad par hay cinco niveles de seguridad: «ninguno», «simple sin contraseña», «simple con contraseña no protegida», «simple con contraseña protegida» y «fuerte».
  - Para la autenticación del originador, hay tres niveles de seguridad: «ninguno», «simple con nombre distinguido» y «fuerte».
  - Para la autenticación de resultados, hay dos niveles de seguridad: «ninguno» y «fuerte».

## 4 Abreviaturas

A los efectos de esta Recomendación | Norma Internacional se utilizan las abreviaturas siguientes:

DSA	Agente de sistema de directorio ( <i>directory system agent</i> )
DSP	Protocolo de sistema de directorio ( <i>directory system protocol</i> )
ICS	Enunciado de conformidad de implementación ( <i>implementation conformance statement</i> )
PICS	Enunciado de conformidad de implementación de protocolo ( <i>protocol implementation conformance statement</i> )

## 5 Conformidad

Un formulario PICS conforme será técnicamente equivalente al formulario PICS publicado por UIT-T | ISO/CEI y preservará la numeración y el orden de los ítems del formulario PICS del UIT-T | ISO/CEI.

Un formulario PICS conforme a esta Recomendación | Norma Internacional:

- a) describirá una implementación que se ajusta a las Recs. de la serie X.500 del CCITT | ISO/CEI 9594;
- b) será un formulario PICS conforme, que se ha llenado de acuerdo con las instrucciones indicadas en la cláusula A.2;
- c) incluirá la información necesaria para identificar de manera única al suministrador y a la implementación.

**Anexo A**

**Formulario de enunciado de conformidad de implementación de protocolo (PICS)  
para el protocolo de sistema de directorio<sup>2)</sup>**

(Este anexo es parte integrante de esta Recomendación | Norma Internacional)

**A.1 Identification of PICS proforma corrigenda**

The supplier of the PICS proforma shall identify any corrigenda (i.e. Technical Corrigenda or equivalent) to the published proforma that have been applied. Suppliers of the proforma should modify the proforma, or attach relevant additional pages in order to apply the corrigenda, and then record the application of the corrigenda in the table below.

Item	ITU-T Rec. X.581 (1995)   ISO/IEC 14608-2:1996
1	Corr:
2	Corr:
3	Corr:
4	Implementors' Guide version:

**A.2 Instructions**

**A.2.1 Purpose and structure of the proforma**

The purpose of this PICS proforma is to provide suppliers of implementations of CCITT Rec. X.500-Series | ISO/IEC 9594 with a consistent means of stating which capabilities have been implemented.

The proforma is in the form of a questionnaire and consists of a set of items. An item is provided for each capability for which an implementation choice is allowed. Items are also provided for major mandatory capabilities for which no implementation choice is allowed. Each item includes an item number, an item description, a status value specifying the support requirement, and room for a support answer to be provided by the supplier.

This subclause provides general information and instructions for completion of the proforma.

Subclause A.3 is for identification of the implementation.

Subclause A.4 contains the means of specifying, at a high level, the protocol and corrigenda that have been implemented.

Subclause A.5 contains the global statement of conformance.

Subclauses A.6 onwards contain tables in which the supplier specifies details of the implementation options chosen.

**A.2.2 Symbols, terms and abbreviations**

**A.2.2.1 Introduction**

Notations have been introduced in order to reduce the size of tables in the PICS proforma. These have allowed the use of multi-column layout where the columns are headed 'Status', and 'Support'. The definition of each are given below.

Additionally, the following definitions apply.

**A.2.2.1.1 (PICS) item:** A row in a PICS proforma table.

**A.2.2.1.2 (PICS) question:** The question to be answered in the intersection of a PICS item and either a support column (i.e. "Is this item supported in the context applying to this table and column") or supported values column (i.e. "What values are supported for this item in the context applying to this table and column") in a PICS proforma table.

---

<sup>2)</sup> Comunicado sobre derechos de autor del formulario de PICS – Los usuarios de esta Recomendación | Norma Internacional pueden reproducir libremente el formulario de PICS de este anexo a fin de que pueda ser utilizado para los fines previstos, y pueden además publicar el PICS cumplimentado.

**A.2.2.1.3 status (value):** An allowed entry in the status column for an item in a PICS proforma table.

**A.2.2.1.4 (support) answer:** An allowed entry in the support or supported values columns for an item in a PICS, in answer to a PICS question.

### A.2.2.2 Item numbering

Each line within the PICS proforma which requires implementation detail to be entered is given an item number in the first column. The item number column provides a means of uniquely referencing each possible answer within the PICS proforma. Such referencing is necessary for specifying conditional expressions, test suite parameters, and test suite selection expressions.

The means of referencing individual answers is to specify the following sequence:

- a) if, and only if, the reference is being made from another Specification, then start with an unambiguous identifier for the relevant ICS proforma specification, enclosed in parentheses – this identifier is stated in the PICS proforma specification and is updated whenever the PICS proforma is updated – it is recommended that this identifier be the relevant Specification number and year of publication, as is used in a Normative references clause, and this is the default for such identifiers;
- b) the number of the relevant table or, if the tables are not numbered, of the smallest subclause enclosing the relevant table;
- c) a solidus character, “/”;
- d) the item number of mnemonic reference to the item, to identify the row in which the answer appears;
- e) if, and only if, more than one question occurs in the row identified by the item number or mnemonic reference, then each possible answer is implicitly labelled a, b, c, etc., from left to right, and this letter is appended to the sequence, prefixed by a solidus character (“/”) if a mnemonic reference is used.

If mnemonic references are specified and each uniquely identify an item in the PICS proforma, then entries b) and c) in the above sequence may be omitted.

### A.2.2.3 Status column

The ‘Status’ column indicates the level of support required for conformance to CCITT Rec. X.500-Series | ISO/IEC 9594. The values are as follows:

- ‘m’ The item is mandatory. The capability is required to be implemented.
- ‘o’ The item is optional. The capability may be implemented.
- ‘o.n’ The item is a mutually exclusive or selectable option among a set (where n is the number which identifies the group of optional items). The requirement for each numbered group is specified as part of the relevant tables.
- ‘c’ The item is conditional. The requirement on the capability depends on the selections of other optional or conditional items. The status (mandatory, optional, prohibited, or non-applicable) depends on the evaluation of a conditional expression which is specified as part of the relevant tables.
- ‘cn’ The item is conditional (where n is the number which identifies the condition which is applicable). The definitions for conditional statements are given as part of the relevant tables.
- ‘x’ The item is prohibited or excluded. There is a requirement not to use this capability in the given context.
- ‘n/a’ The item is not applicable. The capability is not applicable in the given context.

### A.2.2.4 Support column

The ‘Support’ column shall be completed by the supplier or implementor to indicate the level of implementation of each capability. The proforma has been designed such that the only entries required in the ‘Support’ column are:

- ‘Y’ Yes, the capability is implemented in conformance to CCITT Rec. X.500 series | ISO/IEC 9594.
- ‘N’ No, the capability is not implemented.
- ‘\_’ No answer required – it is unnecessary to answer the question with a yes or a no because the question has a status value of non-applicable.

**A.2.2.5 Definition of support**

A DSA implementation may be an invoker and/or a consumer of a DSA operation unless “Chaining Mode” is supported, then the DSA implementation must be able to invoke and consume DSA operations.

A capability is said to be supported if the implementation is able:

- to generate the corresponding operation parameters (either automatically or because the invoker requires that capability explicitly);
- to interpret, handle and when required, make available to the invoker the corresponding error or result.

A protocol element is said to be supported for a sending implementation (i.e. the implementation invoking the subject operation) if the implementation is able to generate it under some circumstances (either automatically or because the invoker requires relevant services explicitly).

A protocol element is said to be supported for a receiving implementation (i.e. the implementation responding to the subject operation) if it is correctly interpreted and handled and also, when appropriate, made available to the invoker.

An object class is said to be supported if the implementation is able to construct entries of that object class. Support of an object class also requires support of the object identifier(s) of its superclass(es) of that object class.

An attribute type is said to be supported by a DSA implementation if the DSA supports a subset or all aspects of the attribute syntax of the attribute and stores the attribute value(s) where appropriate.

**A.2.2.6 Note column**

This column indicates the following:

- n Refers to Note n.
- d(n) A default value n within ( ) is defined in the Recommendation | International Standard. When absent in the PDU, both sender and receiver shall interpret it as having the default value specified in the Recommendation | International Standard.

**A.2.2.7 Abbreviations**

ACSE	Association Control Service Element
Init	Initiator
PDU	Protocol Data Unit
Res	Responder
ROSE	Remote Operations Service Element
v1988	The 1988 version of the Specification.
X.511	CCITT Recommendation X.511 and ISO/IEC 9594-3.
X.518	CCITT Recommendation X.518 and ISO/IEC 9594-4.

**A.2.3 Instructions for completion**

The supplier shall complete all entries in the column marked ‘Support’. In certain clauses of the PICS proforma further guidance for completion may be necessary. Such guidance shall supplement the guidance given in this clause and shall have a scope restricted to the clause in which it appears. In addition, other specifically identified information shall be provided by the implementor where requested. No changes shall be made to the proforma except the completion as required. Recognizing that the level of detail required may, in some instances, exceed the space available for responses, a number of responses specifically allow for the addition of appendices to the PICS.

**A.3 Identification of the implementation****A.3.1 Date of statement**

1	Date of statement? (yy-mm-dd)
---	-------------------------------

**A.3.2 Identification of the implementation and/or system**

Item	Question	Response

3	Corr:	
4	Corr:	
5	Corr:	
6	Implementors' Guide version:	

**A.5 Global statement of conformance**

Are all mandatory features implemented? (yes or no)
NOTE – If a positive response is not given to this box, then the implementation does not conform to CCITT Rec. X.500-Series   ISO/IEC 9594.

Item	Question	Status	Support
1	Are all mandatory general capabilities implemented?	m	
2	Are minimum knowledge requirements (X.518) implemented?	m	
3	Are all mandatory First-level DSA requirements (X.518) implemented?	c.1	
4	Is Cross Reference type implemented?	o	
5	Is NSSR (non-specific subordinate reference) implemented?	o	
6.1.1	Is security level “none” for peer entity authentication supported?	o.2	
6.1.2	Is security level “simple without password” for peer entity authentication supported?	o.2	
6.1.3	Is security level “simple with unprotected password” for peer entity authentication supported?	o.2	
6.1.4	Is security level “simple with protected password” for peer entity authentication supported?	o.2	
6.1.5	Is security level “strong” for peer entity authentication supported?	o.2	
6.2.1	Is security level “none” for originator authentication supported?	o.3	
6.2.2	Is security level “simple with distinguished name” for originator authentication supported?	o.3	
6.2.3	Is security level “strong” for originator authentication supported?	o.3	
6.3.1	Is security level “none” for results authentication supported?	o.4	
6.3.2	Is security level “strong” for results authentication supported?	o.4	
7	Is “DSA Referral Mode” supported?	m	
8	Is “Chaining Mode” supported?	o	
9	Is the alias mechanism implemented?	o	

c.1 This item is mandatory if the special configuration in item A.3.2/7 is a First-level DSA.

o.2 At least one of security levels for peer entity authentication shall be supported.

o.3 At least one of security levels for originator authentication shall be supported.

o.4 At least one of security levels for results authentication shall be supported.

## A.6 Capabilities and options

This part of the PICS proforma identifies the supported application context, the PDUs and operations. Finally, the operation arguments and PDU parameters, and supported object classes and attributed types are identified.

### A.6.1 Supported application context

The only application context supported by this PICS proforma is Directory System application context.

### A.6.2 Operations

Item	Operation	Status	Support	Notes	References
1	DSABind	m			A.6.3.1
2	DSAUnbind	m			A.6.3.2
3	ChainedRead	m			A.6.3.3
4	ChainedCompare	m			A.6.3.4
5	ChainedAbandon	m			A.6.3.5
6	ChainedList	m			A.6.3.6
7	ChainedSearch	m			A.6.3.7
8	ChainedAddEntry	m			A.6.3.8
9	ChainedRemoveEntry	m			A.6.3.9
10	ChainedModifyEntry	m			A.6.3.10
11	ChainedModifyRDN	m			A.6.3.11

### A.6.3 Protocol elements

#### A.6.3.1 DSABind Protocol Elements

##### A.6.3.1.1 DSABind Arguments

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	DirectoryBindArg	m		m			(X.518) 13.1
2	credentials	c1		c1			
3	simple	c2		c2			
4	name	m		m			
5	validity	o		o			
6	password	o		o			
7	strong	c3		c3			
8	externalProcedure	o		o			
9	versions	m		m		d(v1988)	

c1: if the security level for peer entity authentication is “simple without password” (A.5/6.1.2), “simple with unprotected password” (A.5/6.1.3), “simple with protected password” (A.5/6.1.4) or “strong” (A.5/6.1.5) then m else n/a.

c2: if the security level for peer entity authentication is “simple without password” (A.5/6.1.2), “simple with unprotected password” (A.5/6.1.3), or “simple with protected password” (A.5/6.1.4) then m else n/a.

c3: if the security level for peer entity authentication is “strong” (A.5/6.1.5) then m else n/a.

**A.6.3.1.2 DSABind Result**

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	DirectoryBindResult	m		m			(X.518) 13.1
2	credentials	c1		c1			
3	simple	c2		c2			
4	name	m		m			
5	validity	o		o			
6	password	o		o			
7	strong	c3		c3			
8	externalProcedure	o		o			
9	versions	m		m		d(v1988)	
c1: if the security level for originator authentication is “simple with distinguished name” (A.5/6.2.2) or “strong” (A.5/6.2.3) then m else n/a. c2: if the security level for originator authentication is “simple with distinguished name” (A.5/6.2.2) then m else n/a. c3: if the security level for originator authentication is “strong” (A.5/6.2.3) then m else n/a.							

**A.6.3.1.3 DSABindError**

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	DirectoryBindError	m		m			(X.518) 13.1
2	versions	m		m		d(v1988)	
3	ServiceError	m		m			
4	SecurityError	m		m			

**A.6.3.2 DSAUnbind Elements**

DSAUnbind has no arguments (refer to 13.2 of CCITT Rec. X.518 | ISO/IEC 9594-4).

**A.6.3.3 ChainedRead Elements**

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	ChainingArguments	m		m			A.6.3.21 (X.518) 14
2	ReadArgument	m		m			(X.511) 9.1
3	object	m		m			
4	selection	m		m			A.6.3.16
5	CommonArguments	m		m			A.6.3.13
6	ChainingResults	m		m			A.6.3.22
7	ReadResult	m		m			
8	entry	m		m			A.6.3.17
9	CommonResults	m		m			A.6.3.14

#### A.6.3.4 ChainedCompare Elements

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	ChainingArguments	m		m			A.6.3.21 (X.518) 14
2	CompareArgument	m		m			(X.511) 9.2
3	object	m		m			
4	purported	m		m			
5	CommonArguments	m		m			A.6.3.13
6	ChainingResults	m		m			A.6.3.22
7	CompareResult	m		m			(X.511) 9.2
8	DistinguishedName	m		m			
9	matched	m		m			
10	fromEntry	m		m		d(true)	
11	CommonResults	m		m			A.6.3.14

#### A.6.3.5 ChainedAbandon Elements

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	Chaining Arguments	m		m			A.6.3.21 (X.518) 14
2	AbandonArgument	m		m			(X.511) 9.3
3	invokedId	m		m			
4	ChainingResults	m		m			A.6.3.22
5	AbandonResult	m		m			

**A.6.3.6 ChainedList Elements**

Item	Protocol Element	Status (Init)	Support (Init)	Status (Res)	Support (Res)	Notes	References
1	ChainingArguments	m		m			A.6.3.21 (X.518) 14
