Recommendation ITU-T H.830.4

Conformance of ITU-T H.810 personal health devices: WAN interface Part 4: SOAP/ATNA: Receiver

Summary

Recommendation ITU-T H.830.4 is the transposition of Continua Health Alliance Test Tool DG2013, Test Suite Structure & Test Purposes, WAN Interface; Part 4: SOAP/ATNA. Receiver (Version 1.4, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition.

This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

This Recommendation was initially approved as ITU-T H.834 (01/2015) and later renumbered, without further modifications, as ITU-T H.830.4 (01/2015) for consistency with the numbering of new WAN interface conformance testing specifications.

History

Edition	Recommendation	Approval	Study Group	Unique ID*
1.0	ITU-T H.834	2015-01-13	16	11.1002/1000/12252
1.0	ITU-T H.830.4	2015-01-13	16	11.1002/1000/12590

* To access the Recommendation, type the URL <http://handle.itu.int/> in the address field of your web browser, followed by the Recommendation's unique ID. For example, <http://handle.itu.int/11.1002/1000/11830-en>.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

Introduction

This Recommendation is the transposition of Continua Health Alliance Test Tool DG2013, Test Suite Structure & Test Purposes, WAN Interface; Part 4: SOAP/ATNA. Receiver (Version 1.4, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition and these can be found in the table below.

Version	Date	Revision history
1.2	2012-10-05	Initial release for Test Tool DG2011. This uses "TSS&TP_1.5_WAN_PART_4_(REC GEN)_v1.1.doc" as a baseline and adds new features included in [CDG 2011] (Consent management).
1.3	2013-05-24	Initial release for Test Tool DG2012. This uses "TSS&TP_DG2011_WAN_PART_4_(REC GEN)_v1.2.doc" as a baseline and fixes a typo error in ATNA reliable syslog test cases. It does not include technical changes in test procedures because new features included in [CDG 2012] do not affect the test procedures specified in this document.
1.4	2014-01-24	Initial release for Test Tool DG2013. This is the same version as "TSS&TP_DG2012_WAN_PART_4_(REC GEN)_v1.3.doc" because new features included in [ITU-T H.810] do not affect the test procedures specified in this document.

Recommendation ITU-T H.830.4

Conformance of ITU-T H.810 personal health devices: WAN interface Part 4: SOAP/ATNA: Receiver

1 Scope

The scope of this Recommendation¹ is to provide a test suite structure and the test purposes (TSS & TP) for the WAN interface based on the requirements defined in the Continua Design Guidelines (CDG) [ITU-T H.810]. The objective of this test specification is to provide a high probability of air interface interoperability between different devices.

The TSS & TP for the WAN interface document have been divided into the eight parts specified below. This Recommendation covers Part 4.

- Part 1: Web Services Interoperability. Sender
- Part 2: Web Services Interoperability. Receiver
- Part 3: SOAP/ATNA. Sender
- **Part 4: SOAP/ATNA. Receiver**
- Part 5: PCD-01 HL7 Messages. Sender
- Part 6: PCD-01 HL7 Messages. Receiver
- Part 7: Consent Management. Sender
- Part 8: Consent Management. Receiver

2 References

The following ITU-T Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision; users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published. The reference to a document within this Recommendation does not give it, as a stand-alone document, the status of a Recommendation.

3 Definitions

3.1 Terms defined elsewhere

3.1.1 agent [IEEE 11073-20601A]: A node that collects and transmits personal health data to an associated manager.

3.1.2 manager [IEEE 11073-20601A]: A node receiving data from one or more agent systems. Some examples of managers include a cellular phone, health appliance, set top box, or a computer system.

3.2 Terms defined in this Recommendation

None.

4 Abbreviations and acronyms

This Recommendation uses the following abbreviations and acronyms:

ATNA	Audit Trail and Node Authentication
ATS	Abstract Test Suite
CDG	Continua Design Guidelines
DUT	Device Under Test
GUI	Graphical User Interface
INR	International Normalized Ratio
IUT	Implementation Under Test
MDS	Medical Device System
NFC	Near Field Communication
PCD	Patient Care Device
PCT	Protocol Conformance Testing
PHD	Personal Healthcare Device
PHDC	Personal Healthcare Device Class
PHM	Personal Health Manager
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation extra Information for Testing
SDP	Service Discovery Protocol
SOAP	Simple Object Access Protocol
TCRL	Test Case Reference List
TCWG	Test and Certification Working Group
TP	Test Purpose

TSS	Test Suite Structure
USB	Universal Serial Bus
WAN	Wide Area Network
WDM	Windows Driver Model
WS	Web Service
WSDL	Web Service Description Language
XML	extensible Markup Language

5 Conventions

The key words "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "MAY", "MAY NOT" in this Recommendation are to be interpreted as in [b-ETSI SR 001 262].

- SHALL is equivalent to 'must' or 'it is required to'.
- SHALL NOT is equivalent to 'must not' or 'it is not allowed'.
- SHOULD is equivalent to 'it is recommended to'.
- SHOULD NOT is equivalent to 'it is not recommended to'.
- MAY is equivalent to 'is permitted'.
- MAY NOT is equivalent to 'it is not required that'.

NOTE – The above-mentioned key words are capitalized for illustrative purposes only and they do not appear capitalized within this Recommendation.

Reference is made in the ITU-T H.800-series of Recommendations to different versions of the Continua design guidelines (CDG) by a specific designation. The list of terms that may be used in this Recommendation is provided in Table 1. Furthermore, the 2013 edition of the Continua design guidelines, which is published as [ITU-T H.810], is designated by "CDG 2013" as an extension of the designations indicated in the bibliography.

Table 1 – List of designations associated with the various versions of the CDG

CDG name	Transposed as	Version	Description	Designation
2013 plus errata	[ITU-T H.810]	4.1	CDG 2013 plus errata noting all ratified bugs.	–
2013	–	4.0	Release 2013 of CDG including maintenance updates of the CDG 2012 and additional guidelines that cover new functionalities.	Endorphin
2012 plus errata	–	3.1	CDG 2012 plus errata noting all ratified bugs [b-CDG 2012].	–
2012	–	3.0	Release 2012 of the CDG including maintenance updates of CDG 2011 and additional guidelines that cover new functionalities.	Catalyst
2011 plus errata	–	2.1	CDG 2011 integrated with identified errata.	–
2011	–	2.0	Release 2011 of CDG including maintenance updates of CDG 2010 and additional guidelines that cover new functionalities [b-CDG 2011].	Adrenaline

Table 1 – List of designations associated with the various versions of the CDG

CDG name	Transposed as	Version	Description	Designation
2010 plus errata	–	1.6	CDG 2010 integrated with identified errata	–
2010	–	1.5	Release 2010 of the CDG with maintenance updates of CDG Version 1 and additional guidelines that cover new functionalities [b-CDG 2010].	1.5
1.0	–	1.0	First released version of the CDG [b-CDG 1.0].	–

6 Test suite structure (TSS)

The test purposes (TPs) for the WAN interface have been divided into the main subgroups specified below. Annex A describes the TPs for groups 2.2 and 2.3 (shown in bold).

- Group 1: Sender (SEN)
 - Group 1.1: Web services interoperability (WSI)
 - Subgroup 1.1.1: Basic profile (BP)
 - Subgroup 1.1.2: Basic security profile (BSP)
 - Subgroup 1.1.3: Reliable messaging (RM)
 - Group 1.2: SOAP (SOAP)
 - Subgroup 1.2.1: SOAP headers (HEAD)
 - Group 1.3: Audit (ATNA)
 - Subgroup 1.3.1: General (GEN)
 - Subgroup 1.3.2: PCD-01 (PCD-01)
 - Subgroup 1.3.3: Consent management (CM)
 - Group 1.4: PCD-01 HL7 messages (PCD-01-DATA)
 - Subgroup 1.4.1: General (GEN)
 - Subgroup 1.4.2: Design guidelines (DG)
 - Subgroup 1.4.3: Pulse oximeter (PO)
 - Subgroup 1.4.4: Blood pressure monitor (BPM)
 - Subgroup 1.4.5: Thermometer (TH)
 - Subgroup 1.4.6: Weighing scales (WEG)
 - Subgroup 1.4.7: Glucose meter (GL)
 - Subgroup 1.4.8: Cardiovascular fitness and activity monitor (CV)
 - Subgroup 1.4.9: Strength fitness equipment (ST)
 - Subgroup 1.4.10: Independent living activity hub (HUB)
 - Subgroup 1.4.11: Adherence monitor (AM)
 - Subgroup 1.4.12: Peak expiratory flow monitor (PF)
 - Subgroup 1.4.13: Body composition analyser (BCA)
 - Subgroup 1.4.14: Basic electrocardiograph (ECG)
 - Group 1.5: Consent management (CM)

- Subgroup 1.5.1: WAN XDR transaction (TRANS)
- Subgroup 1.5.2: WAN metadata validation (META)
- Subgroup 1.5.3: WAN consent directive validation (CDV)
- Group 2: Receiver (REC)
 - Group 2.1: Web service interoperability (WSI)
 - Subgroup 2.1.1: Basic profile (BP)
 - Subgroup 2.1.2: Basic security profile (BSP)
 - Subgroup 2.1.3: Reliable messaging (RM)
 - **Group 2.2: SOAP (SOAP)**
 - **Subgroup 2.2.1: SOAP headers (HEAD)**
 - **Group 2.3: Audit (ATNA)**
 - **Subgroup 2.3.1: General (GEN)**
 - **Subgroup 2.3.2: PCD-01 (PCD-01)**
 - **Subgroup 2.3.3: Consent management (CM)**
 - Group 2.4: PCD-01 HL7 messages (PCD-01-DATA)
 - Subgroup 2.4.1: General (GEN)
 - Subgroup 2.4.2: Design guidelines (DG)
 - Subgroup 2.4.3: Pulse oximeter (PO)
 - Subgroup 2.4.4: Blood pressure monitor (BPM)
 - Subgroup 2.4.5: Thermometer (TH)
 - Subgroup 2.4.6: Weighing scales (WEG)
 - Subgroup 2.4.7: Glucose meter (GL)
 - Subgroup 2.4.8: Cardiovascular fitness and activity monitor (CV)
 - Subgroup 2.4.9: Strength fitness equipment (ST)
 - Subgroup 2.4.10: Independent living activity hub (HUB)
 - Subgroup 2.4.11: Adherence monitor (AM)
 - Subgroup 2.4.12: Peak expiratory flow monitor (PF)
 - Subgroup 2.4.13: Body composition analyser (BCA)
 - Subgroup 2.4.14: Basic electrocardiograph (ECG)
 - Group 2.5: Consent management (CM)
 - Subgroup 2.5.1: WAN XDR transaction (TRANS)
 - Subgroup 2.5.2: WAN service validation (SER)

7 Electronic attachment

The protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A can be downloaded from <http://handle.itu.int/11.1002/2000/12067>.

In the electronic attachment, letters "C" and "I" in the column labelled "Mandatory" are used to distinguish between "PICS" and "PIXIT" respectively during testing. If the cell is empty, the corresponding PICS is "independent". If the field contains a "C", the corresponding PICS is dependent on other PICS, and the logical expression is detailed in the "SCR_Expression" field. The static conformance review (SCR) is used in the test tool to assert whether the PICS selection is consistent.

Annex A

Test purposes

(This annex forms an integral part of this Recommendation.)

A.1 TP definition conventions

The test purposes (TP) are defined according to the following rules:

- **TP Id:** This is a unique identifier (TP/<TT>/<DUT>/<GR>/<SGR>/<XX> – <NNN>). It is specified according to the naming convention defined below:
 - Each test purpose identifier is introduced by the prefix "TP".
 - <TT>: This is the test tool that will be used in the test case.
 - WAN: Wide area network
 - <DUT>: This is the device under test.
 - SEN: WAN observation sender
 - REC: WAN observation receiver
 - <GR>: This identifies a group of test cases.
 - <SGR>: This identifies a subgroup of test cases.
 - <XX>: This identifies the type of testing.
 - BV: Valid behaviour test
 - BI: Invalid behaviour test
 - <NNN>: This is a sequential number that identifies the test purpose (TP).
- **TP label:** This is the title of the TP.
- **Coverage:** This contains the specification reference and clause to be checked by the TP.
 - Spec: This indicates the earliest version of the specification from which the testable items to be checked by the TP are included.
 - Testable Item: This contains testable items to be checked by the TP.
- **Test purpose:** This is a description of the requirements to be tested.
- **Applicability:** This contains the PICS items that define if the test case is applicable or not for a specific device. When a TP contains an "ALL" in this field it means that it applies to the device under test within that scope of the test (specialization, transport used, etc.).
- **Initial condition:** This indicates the state to which the DUT needs to be moved at the beginning of TC execution.
- **Test procedure:** This describes the steps to be followed in order to execute the test case.
- **Pass/Fail criteria:** This provides criteria to decide whether the DUT passes or fails the test case.

A.2 Subgroup 2.2.1: SOAP headers (HEAD)

TP Id		TP/WAN/REC/SOAP/HEAD/BV-000		
TP label		Requirements for Transactions which don't use HL7 V3 Messages		
Coverage	Spec	[IHE ITI-TF-2], Volume 2x, Appendix V		
	Testable items	Namespaces; M	IHE-WSP201; M	IHE-WSP202; M
		IHE-WSP203; M	IHE-WSP205; M	IHE-WSP206; M
		IHE-WSP207; M	IHE-WSP208; M	IHE-WSP211; M
		IHE-WSP212; M	IHE-WSP300; M	IHE-WSA101; M
Applicability		C_REC_000		
Initial condition		The receiver under test has a WebService published and the simulated sender is ready to send a SOAP message.		
Test procedure		<p>1. The simulated sender takes the WSDL description of the WebService provided by the receiver and checks:</p> <ol style="list-style-type: none"> a. Namespaces: <ul style="list-style-type: none"> <input type="checkbox"/> wsdl: "http://schemas.xmlsoap.org/wsdl/" <input type="checkbox"/> soap12: "http://schemas.xmlsoap.org/wsdl/soap12" <input type="checkbox"/> xsd: "http://www.w3.org/2001/XMLSchema" <input type="checkbox"/> wsaw: "http://www.w3.org/2006/05/addressing/wsdl" b. WSDL artifacts: <ul style="list-style-type: none"> <input type="checkbox"/> message request -> {Transaction Name}_Message <input type="checkbox"/> message response -> {Transaction Name}_Response_Message <input type="checkbox"/> portType -> {NAME}_PortType <input type="checkbox"/> Operation -> {NAME}_{Transaction Name}[_OperationID] <input type="checkbox"/> SOAP 1.2 binding -> {NAME}_Binding_Soap12 <input type="checkbox"/> SOAP 1.2 port -> {NAME}_Port_Soap12 <p>where NAME is the value of the /wsdl:definitions/@name attribute and Transaction Name represents the formal IHE transaction name for this particular web-service exchange with spaces omitted from the name.</p> c. The targetNamespace is urn:ihe:{DOMAIN};{PROFILE};{YEAR} and can be extended to urn:ihe:{DOMAIN};{PROFILE};{YEAR};{TYPE} d. Two WSDL messages are defined, one for the request transaction and another for the response transaction. e. A single WSDL part named Body is defined for each WSDL message and the part type refers to an element defined in the schema definition included in the xsd reference. f. For each input and output message defined in the WSDL portType operation an attribute wsaw:Action is included and: <ul style="list-style-type: none"> <input type="checkbox"/> wsdl:operation/wsdl:input/@wsaw:Action = "urn:ihe:{Domain};{Year};{Transaction name}" <input type="checkbox"/> wsdl:operation/wsdl:output/@wsaw:Action = "urn:ihe:{Domain};{Year};{Transaction name}Response" g. For each operation defined in the WSDL portType a wsaw:operation/@soapAction attribute is provided and its value is consistent with the name for the corresponding WSDL operation defined in the WSDL portType h. WSDL provided with an IHE specification uses the binding extension for SOAP 1.2 <p>2. The simulated sender sends a SOAP message to the receiver using addressing header blocks.</p> <p>3. The receiver responds with another SOAP message. Check that all <wsa:Action> elements have the mustUnderstand attribute set (mustUnderstand='1' ir 'true')</p>		
Pass/Fail criteria		<p>In step 1, all elements are in the WSDL description.</p> <p>In step 3, the response messages are as specified.</p>

Coverage	Spec	[b-CDG 2012]		
	Testable items	CommonReq 4; M	SecGuidelines 1; M	SecGuidelines 4; M
Applicability		C_REC_000		
Initial condition		The receiver under test has a WebService published and the simulated sender is ready to establish a connection using TLS [b-IETF RFC 2246] and SAML 2.0 as an authentication token [b-OASIS SAMLTP].		
Test procedure		<ol style="list-style-type: none"> 1. The simulated sender starts a connection with the receiver using HTTP over TLS v1.0. 2. The receiver under test allows the connection. 3. The sender sends a message using an SAML 2.0 token as an authentication token. 4. The receiver accepts the token and responds to the message without a security error. 		
Pass/Fail criteria		All steps are as specified above. If the receiver responds with an error in step 4, it shall not be provoked by security reasons.		
Notes				

TP Id		TP/WAN/REC/SOAP/HEAD/BV-002		
TP label		WAN Observation Receiver Requirements		
Coverage	Spec	[b-CDG 2011]		
	Testable items	ReceiverReq 2; M	ReceiverReq 3; M	
Applicability		C_REC_000		
Initial condition		The simulated sender using WS-RM and the Receiver under test are in a none sequence state.		
Test procedure		<ol style="list-style-type: none"> 1. The simulated sender sends a CreateSequence message to the receiver with an offer element. 2. The receiver under test responds with CreateSequenceResponse or with CreateSequenceRefused. 3. If the sequence created is not refused, the simulated sender sends an HL7 message within the soap body of a sequence message indicating that it is the last one. 4. The receiver responds with a SequenceAck header block message, a sequence header block and an HL7 message in the body. 5. The simulated sender sends a SequenceAcknowledgement. 		
Pass/Fail criteria		All steps are as specified above.		
Notes		The receiver acts as an RM source in step 4 and as an RM destination in the other steps.		

A.3 Subgroup 2.3.1: ATNA general (GEN)

TP Id		TP/WAN/REC/ATNA/GEN/BV-006	
TP label		Reliable Syslog ATNA Actor behaviour	
Coverage	Spec	[IHE ITI-TF-2]	
	Testable items	Audit_MT-1; M	
Applicability		C_REC_000 AND C_REC_GEN_001 AND C_REC_ATNA_001	
Initial condition		The WAN receiver under test is shutdown. The simulated WAN sender has a SOAP message (a PCD-01 message or a consent document) ready to be sent and the Simulated Audit Repository with Reliable Syslog transport is intentionally disabled.	
Test procedure		<ol style="list-style-type: none"> 1. The WAN receiver application under test is started and it sends the corresponding audit record message to the audit repository. As the simulated audit repository receiver is disabled, the message will not be delivered. 2. Wait for one minute. 3. The test tool starts the simulated audit repository. 4. If C_REC_GEN_002 = FALSE (the SUT does not support consent management) THEN the simulated WAN sender sends a PCD-01 message to the WAN receiver under test. IF C_REC_GEN_002 = TRUE (the SUT supports consent management) THEN the simulated WAN sender sends a consent document to the WAN receiver under test. 5. The test tool receives the SOAP message (a PCD-01 message or a consent document) acknowledge and the audit record messages sent by the WAN receiver under test. 	
Pass/Fail criteria		<ul style="list-style-type: none"> • Two audit record messages must be received by the simulated audit repository: One for the WAN receiver start action (step 1) and the other for the SOAP message sent in step 4. • There is one audit record with the attribute "code" of the element EventID set to "110107" (PHI-import) and the EventDateTime attribute of the EventIdentification element is set to the expedition time of the SOAP message sent in step 4. • There is one audit record with the attribute "code" of the element EventID set to "110120" (start action) and the EventDateTime attribute of the EventIdentification element is set at least one minute before the expedition time of the SOAP message sent in step 4. 	
Notes		In step 4, the way to force the WAN receiver to send the pendant audit record not delivered in step 1, depends on the vendor implementation. A typical strategy could be to send another WAN message and its corresponding ATNA record, in this way, when WAN receiver under test sends the ATNA record PHI-import then it would send the pendant audit record along with the newer one.

SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
Series D	General tariff principles
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant
Series M	Telecommunication management, including TMN and network maintenance
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Terminals and subjective and objective assessment methods
Series Q	Switching and signalling
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks, open system communications and security
Series Y	Global information infrastructure, Internet protocol aspects and next-generation networks
Series Z	Languages and general software aspects for telecommunication systems
