(03/93)

SPECIFICATIONS OF SIGNALLING SYSTEM No. 7

NUMBERING OF INTERNATIONAL SIGNALLING POINT CODES

ITU-T Recommendation Q.708

Superseded by a more recent version

(Previously "CCITT Recommendation")

FOREWORD

The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the International Telecommunication Union. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, established the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

ITU-T Recommendation Q.708 was revised by the ITU-T Study Group XI (1988-1993) and was approved by the WTSC (Helsinki, March 1-12, 1993).

NOTES

1 As a consequence of a reform process within the International Telecommunication Union (ITU), the CCITT ceased to exist as of 28 February 1993. In its place, the ITU Telecommunication Standardization Sector (ITU-T) was created as of 1 March 1993. Similarly, in this reform process, the CCIR and the IFRB have been replaced by the Radiocommunication Sector.

In order not to delay publication of this Recommendation, no change has been made in the text to references containing the acronyms "CCITT, CCIR or IFRB" or their associated entities such as Plenary Assembly, Secretariat, etc. Future editions of this Recommendation will contain the proper terminology related to the new ITU structure.

2 In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

CONTENTS

NUMBERING OF INTERNATIONAL SIGNALLING POINT CODES

(Málaga-Torremolinos 1984, modified at Helsinki, 1993)

1 Introduction

This Recommendation describes the numbering scheme of international signalling point codes for Signalling System No. 7 networks. The technical aspects of the signalling networks are specified in Recommendation Q.705.

The worldwide signalling network is structured into two functionally independent levels, namely the international and national levels. This structure makes possible a clear division of responsibility for signalling network management and allows numbering plans of signalling points of the international network and the different national networks to be independent of one another.

It is also noted that the point code is intended to be processed within the Message Transfer Part of each signalling point or signalling transfer point, so that there is no direct relationship to the telephone, data, or ISDN numbering.

2 Numbering of International Signalling Points

2.1 A 14-bit binary code is used for the identification of signalling points.

2.2 An international signalling point code (ISPC) should be assigned to each signalling point which belongs to the international signalling network. For some network environment, one physical network node may serve as more than one signalling point, and may therefore be assigned more than one signalling point code.

2.3 All international signalling point codes (ISPC) should consist of three identification sub-fields as indicated in Figure 1. The sub-field of 3 bits (NML) should identify a world geographical zone. The sub-field of 8 bits (K-D) should identify a geographical area or network in a specific zone. The sub-field of 3 bits (CBA) should identify a signalling point in a specific geographical area or network. The combination of the first and second sub-fields could be regarded as a signalling area/network code (SANC).

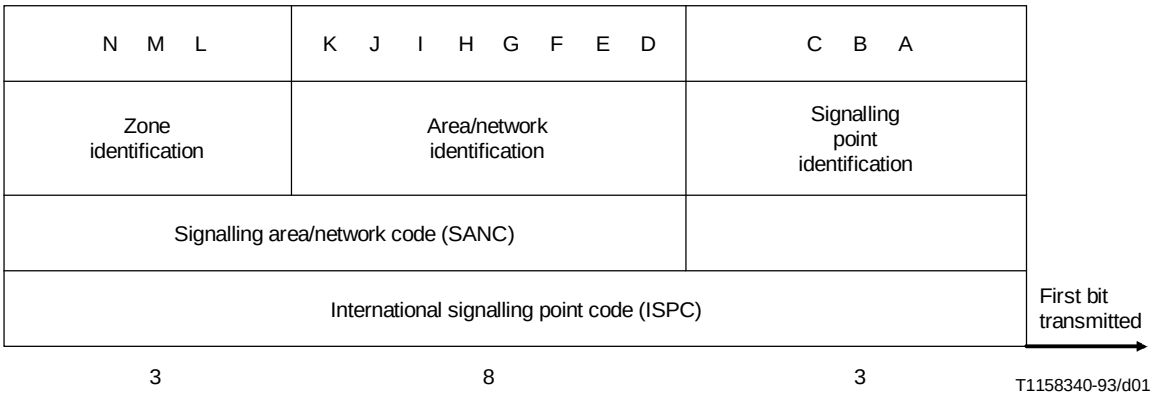

FIGURE 1/Q.708

Format for international signalling point code (ISPC)

2.4 Each country (or geographical area) should be assigned at least one signalling area/network code (SANC).

2.5 Two of the zone identifications, namely 0 and 1 codes, are reserved for future allocation.

2.6 The system of international signalling point codes (ISPC) will provide for $6 \times 256 \times 8$ (12288) ISPCs.

2.7 If a country (or geographical area) should require more than 8 international signalling points, one or more additional signalling area/network code(s) (SANC) would be assigned to it.

2.8 Lists of signalling area/network codes (SANC) to be used in the development of international signalling point codes (ISPC) is given in Annex A to this Recommendation. It shows SANCs assigned to each geographical area that already has other code assignments in existing public telecommunication networks. All codes not shown on the lists are spare codes.

2.9 The assignment of signalling area/network codes (SANC) is to be administered by the CCITT. The assignment of signalling point identifications in the sub-field (CBA) will be made by each country (or geographical area) and the CCITT Secretariat notified.

2.10 The Member countries of the International Telecommunications Union not mentioned in Annex A who wish to take part in the international signalling network or those Members that require an additional signalling area/network code (SANC) should ask the Director of the CCITT for the assignment of an available SANC. In their request, they may indicate the available SANC preferred.

2.11 The Director of the CCITT takes care that:

- Generally the assignments are made on a one by one basis and contiguously for a given geographical area, or a given signalling network. (Geographical designations, or network names, may be entered in the list.)
- The needs of each Member country of the International Telecommunication Union for a new SANC shall be met under all circumstances. Should there not be any additional contiguous codes available, a new sequence of contiguous codes shall be opened up for the country concerned. Such a new code sequence will be established firstly at the bottom of the block of spare codes at the end of the lists in Annex A, and secondly at the bottom of existing sequences when it is likely that the adjacent code groups will not require the spares.
- Code assignments appearing in Annex A, but obviously not required anymore because the networks concerned are reached with other SANCs will be deleted from the annex.

2.12 Assignments by the Director of the CCITT of SANC as well as assignments by countries of the signalling point identifications will be published in the Operational Bulletin of the ITU. The representation of ISPC should be shown in decimal form in each sub-field, i.e. Z-UUU-V where Z, UUU, and V are corresponding to bits NML, K-D and CBA, respectively.

Annex A

Lists of Signalling Area/Network Codes (SANC)[1)]

(This annex forms an integral part of this Recommendation)

NOTE – These lists are shown by the decimal representation, i.e. Z-UUU where Z is zone identification and UUU is area/network identification.

Zone 2

Code	*Geographical Area or Signalling Network*
2-004	Greece
2-008 and 2-009	Netherlands (Kingdom of the)

1) The SANC for several ITU Members of these lists will be assigned in the near future, as soon as these Members make the request to the TSB Director.

Zone 2 (cont.)

Code	*Geographical Area or Signalling Network*
2-012 and 2-013	Belgium
2-016 through 2-023	France
2-024	Monaco
2-028 through 2-030	Spain
2-032	Hungary (Republic of)
2-040	Yugoslavia (Federal Republic of)
2-044 through 2-046	Italy
2-052	Romania
2-056 and 2-057	Switzerland (Confederation of)
---	Czech Republic
---	Slovac Republic
2-064 and 2-065	Austria
2-068	United Kingdom of Great Britain and Northern Ireland (British Telecom)
2-072	United Kingdom of Great Britain and Northern Ireland (Mercury Telecommunications Limited)
2-076	Denmark
2-080 through 2-083	Sweden
2-084 through 2-086	Norway
2-088 through 2-091	Finland
2-092	Estonia (Republic of)
---	Latvia (Republic of)
2-100	Russian Federation
2-120	Poland (Republic of)
2-036 through 2-039, and 2-124 through 2-131	Germany (Federal Republic of)
2-132	Gibraltar
2-136 through 2-138	Portugal
2-140	Luxembourg
2-144	Ireland
2-148	Iceland
2-152	Albania (Republic of)
2-156	Malta
2-160	Cyprus (Republic of)
2-168	Bulgaria (Republic of)
2-172	Turkey
2-180	Croatia (Republic of)
---	Slovenia (Republic of)
2-184	San Marino

Zone 2 (cont.)

Code	*Geographical Area or Signalling Network*
2-188	United Kingdom of Great Britain and Northern Ireland (World Com)
2-192	Sweden (Fonetel)
---	Lithuania (Republic of)
---	Armenia (Republic of)
---	Belarus (Republic of)
---	Georgia (Republic of)
---	Ukraine
---	Bosnia and Herzegovina (Republic of)
---	The Former Yugoslav Rep. of Macedonia
---	Moldova (Republic of)

Zone 2, Spare Codes: 224

Zone 3

Code	*Geographical Area or Signalling Network*
3-004 through 3-012	Canada
3-016	St. Pierre and Miquelon (French Department of)
3-020 through 3-059	United States of America
3-060	Puerto Rico
3-064	Virgin Islands (USA)
3-068, 3-069 and 3-070	Mexico
3-076	Jamaica
3-080	French Antilles
3-084	Barbados
3-088	Antigua and Barbuda
3-092	Cayman Islands
3-096	British Virgin Islands
3-100	Bermuda
3-104	Grenada
3-108	Montserrat
3-112	St. Kitts and Nevis
3-116	St. Lucia
3-120	St. Vincent and the Grenadines
3-124	Netherlands Antilles

Zone 3 (cont.)
