SPECIFICATIONS OF SIGNALLING SYSTEM No. 7

TUP TEST SPECIFICATION

ITU-T Recommendation Q.783

(Extract from the *Blue Book*)

NOTES

1 ITU-T Recommendation Q.783 was published in Fascicle VI.9 of the *Blue Book*. This file is an extract from the *Blue Book*. While the presentation and layout of the text might be slightly different from the *Blue Book* version, the contents of the file are identical to the *Blue Book* version and copyright conditions remain unchanged (see below).

2 In this Recommendation, the expression “Administration” is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

TUP TEST SPECIFICATION

1 Introduction

This Recommendation contains a set of detailed tests for the Signalling System No. 7 Telephony User Part (TUP). These tests are intended to validate the protocol specified in Q.721-Q.724 Recommendations. This Recommendation conforms to Q.780 Recommendations which describes the basic rules of the test specification.

2 General principles of TUP tests

The TUP tests aim at testing TUP protocol conformance in a given implementation. The tests are described as "Validation" tests or "Validation" and "Compatibility" tests. Each test description indicates in the field "type of test" whether the test is "Validation" or "Validation" and "Compatibility". As the TUP also describes the required call control actions resulting from TUP message transfer the TUP tester also checks the result of those call control actions, e.g. that speech/information transfer is possible.

3 Test configuration

A stable signalling relation is required between "SP A" and "SP B" in order to effectively test the TUP. In addition telephony circuits are required for some of the tests.

4 TUP test list

All tests may be validation tests. Tests marked "*" are compatibility tests. Tests marked "fs" are for further study.

1 Circuit supervision

* 1.1 Non allocated circuits

1.2 Reset of circuits

1.2.1 RSC received on an idle circuit

1.2.2 RSC sent on an idle circuit

1.2.3 Group reset received

1.2.4 Group reset sent

1.3 Blocking of circuits

1.3.1 Group blocking/unblocking

1.3.1.1 HGB received

1.3.1.2 HGB sent

* 1.3.1.3 MGB received

* 1.3.1.4 MGB sent

1.3.2 Circuit blocking/unblocking

* 1.3.2.1 BLO received

* 1.3.2.2 BLO sent

* 1.3.2.3 Circuit blocking from both ends; removal of blocking from one end

1.3.2.4 Interruption for FDM circuits

1.4 Continuity check test call

* 1.4.1 CCTC received: successful

* 1.4.2 CCTC sent: successful

1.4.3 CCTC received: unsuccessful

1.4.4 CCTC sent: unsuccessful

1.5 Receipt of unreasonable signalling information

1.5.1 Received

2 *Normal call set-up*

2.1 Both way circuit selection

* 2.1.1 IAM sent by controlling SP

* 2.1.2 IAM sent by non controlling SP

2.2 Called address sending

* 2.2.1 "en bloc" operation

* 2.2.2 Overlap operation

2.3 Successful call set-up

2.3.1 Ordinary call (with various ACM and ANS)

* 2.3.2 Call switched via satellite

* 2.3.3 Test for echo suppressor call set-up

* 2.3.4 Blocking and unblocking during a call (initiated)

* 2.3.5 Blocking and unblocking during a call (received)

3 *Normal call release*

* 3.1 Calling party clears: before ACM

* 3.2 Calling party clears: before ANS

* 3.3 Calling party clears: after ANS

* 3.4 Calling party clears: after CLEAR BACK

* 3.5 Reanswer

4 *Unsuccessful set-up*

4.1 SEC

4.1.1 SEC received

4.1.2 SEC sent

4.2 CGC

4.2.1 CGCreceived

4.2.2 CGC sent

4.3 NNC

4.3.1 NNC received

4.3.2 NNC sent

4.4 ADI

* 4.4.1 ADI received

* 4.4.2 ADI sent

4.5 CFL

4.5.1 CFL received

4.5.2 CFL sent

4.6 SSB

* 4.6.1 SSB received

* 4.6.2 SSB sent

4.7 UNN

* 4.7.1 UNN received

* 4.7.2 UNN sent

4.8 LOS

4.8.1 LOS received

4.8.2 LOS sent

4.9 SST

4.9.1 SST received

4.9.2 SST sent

4.10 ACB

4.10.1 ACB received

4.10.2 ACB sent

4.11 DPN

4.11.1 DPN received

4.11.2 DPN sent

5 *Abnormal situation during a call*

5.1 Inability to release in response to a CLF

5.2 Inability to release in response to a backward signal

5.3 Timers

5.3.1 T2

5.3.2 T3

5.3.3 T4

5.3.4 T5

5.3.5 T6

* 5.3.6 ANS signal not received (Q.118 Timer)

* 5.3.7 Delay in clearing by calling party (Q.118 Timer)

5.4 Reset of circuits during a call

5.4.1 Of an outgoing circuit

5.4.2 Of an incoming circuit

5.5 Receipt of unreasonable signalling information

5.5.1 (Now test No. 1.5.1)

fs 5.5.2 Received

5.6 Interruption of signalling relation

6 *Special call set-up*

6.1 Continuity check call

* 6.1.1 COT applied on an outgoing circuit

* 6.1.2 COT applied on previous circuit

* 6.1.3 COT on a satellite circuit

6.1.4 Calling party clears during a COT

* 6.1.5 Delay of through connect

6.1.6 COT unsuccessful

6.1.7 COT received on incoming circuit

6.2 Automatic repeat attempt

6.2.1 Dual seizure

6.2.2 Circuit reset

6.2.3 Reception of unreasonable signal information

- * 6.2.4 Blocking of the circuit
- 6.2.5 Continuity check failure
- 6.3 Dual seizure
 - 6.3.1 Dual seizure for controlling side
- 7 *Supplementary services*
 - fs 7.1 CUG
 - fs 7.2 User access to the calling line identity
 - fs 7.3 User access to the called line identity
 - fs 7.4 Redirection of calls
 - fs 7.5 CCBS
 - fs 7.6 Network access to calling line identity

8 *Performance tests*

Note - For further study.

Note 1 – The arrows indicate a signalling relation, and any necessary telephone circuits.

FIGURE 1/Q.783
Test configuration for TUP level 4 tests
Configuration 1

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER : 1.1	
REFERENCE :	
TITLE : Circuit supervision	
SUBTITLE : Non-allocated circuits	
PURPOSE : To verify that on receipt of a CIC relating to a circuit which does not exist, SP A will discard the message and alert maintenance personnel	
PRE-TEST CONDITIONS : Arrange the data in signalling point B such that the CIC identifies a circuit that does not exist between SP A and SP B	
CONFIGURATION : 1	TYPE OF TEST : VAT and CPT
TYPE OF SP : SP	
EXPECTED MESSAGE SEQUENCE :	
<div><div>SP A</div><div>SP B</div><div><----- IAM</div></div>	
TEST DESCRIPTION	
1.	Arrange for SP B to send an initial address message. Record the message sequence using a signal monitor.
2.	CHECK A: IS THE CIRCUIT IDLE ?
3.	CHECK B: WAS THE MESSAGE SEQUENCE AS SHOWN ABOVE?
4.	CHECK C: WAS THE INDICATION GIVEN TO THE MAINTENANCE PERSONNEL?

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER : 1.2.1		
REFERENCE : Q.724 § 1.15.1		
TITLE : Reset of circuits		
SUBTITLE : RSC received on an idle circuit		
PURPOSE : To verify that on receipt of a reset circuit signal SP A will respond by sending a release guard signal		
PRE-TEST CONDITIONS : The circuit is idle		
CONFIGURATION : 1	TYPE OF TEST : VAT	TYPE OF SP : SP
<p>EXPECTED MESSAGE SEQUENCE :</p> <div style="display: flex; justify-content: space-between; align-items: center; margin-top: 20px;"> <div style="text-align: center;"> <p>SP A</p> <p>RLG</p> </div> <div style="text-align: center; flex-grow: 1;"> <p> <----- -----> </p> </div> <div style="text-align: center;"> <p>SP B</p> <p>RSC</p> </div> </div>		
TEST DESCRIPTION		
<ol style="list-style-type: none"> 1. 2. 3. 	<ol style="list-style-type: none"> Arrange for SP B to send a reset-circuit signal. Record the message sequence using a signal monitor. CHECK A: IS THE CIRCUIT IDLE ? CHECK B : WAS THE MESSAGE SEQUENCE AS ABOVE ? 	

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER : 1.2.2		
REFERENCE : Q.724 § 1.15.1		
TITLE : Reset of circuits		
SUBTITLE : RSC sent on an idle circuit		
PURPOSE : To verify that SP A is able to generate reset-circuit signal		
PRE-TEST CONDITIONS : The circuit is idle		
CONFIGURATION : 1	TYPE OF TEST : VAT	TYPE OF SP : SP
<p>EXPECTED MESSAGE SEQUENCE :</p> <div style="display: flex; justify-content: space-between; align-items: center; margin-top: 10px;"> <div style="text-align: center;"> <p>SP A</p> <p>RSC</p> </div> <div style="text-align: center; flex-grow: 1;"> <p>-----></p> <p><-----</p> </div> <div style="text-align: center;"> <p>SP B</p> <p>RLG</p> </div> </div>		
TEST DESCRIPTION		
<ol style="list-style-type: none"> 1. 2. 3. 	<p>Arrange for SP A to send a reset-circuit signal.</p> <p>Record the message sequence using a signal monitor.</p> <p>CHECK A: IS THE CIRCUIT IDLE ?</p> <p>CHECK B: WAS THE MESSAGE SEQUENCE AS ABOVE ?</p>

UBL	----->																																					
	<-----	UBA																																				
TEST DESCRIPTION																																						
1.	Make a call from SP A to SP B. Record the message sequence using a signal monitor.																																					
2.	CHECK A: CAN RINGING TONE BE HEARD?.....																																					
3.	The called party should answer the call.																																					
4.	CHECK B: IS SPEECH POSSIBLE?....																																					
5.	SP A should initiate circuit blocking relating to the circuit used for this call.																																					
6.	CHECK C: IS SPEECH STILL POSSIBLE?....																																					
7.	The calling party should clear the call.																																					
8.	CHECK D: VERIFY THAT A CALL CAN ONLY BE ORIGINATED ON THIS CIRCUIT BY SPA?..																																					
9.	SP A should send an unblocking signal.																																					
10.	CHECK E: VERIFY THAT A CALL CAN BE SUCCESSFULLY ORIGINATED FROM EITHER SP.																																					
11.	CHECK F: WAS THE MESSAGE SEQUENCE AS ABOVE?.....																																					
12.	Repeat this test in the reverse direction.																																					
	<i>Note</i> - The blocking signal may be generated after the call has cleared.																																					

TUP LEVEL 4 TEST SPECIFICATION

TITLE : ADI																	
SUBTITLE : ADI sent																	
PURPOSE : To verify that signalling point A is able to generate an address incomplete signal																	
PRE-TEST CONDITIONS : SP A should be able to determine that the proper number of digits has not been received																	
CONFIGURATION : 1	TYPE OF TEST : VAT and CPT	TYPE OF SP : SP															
<p>EXPECTED MESSAGE SEQUENCE :</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 33%; text-align: center; vertical-align: top;"> SP A </td><td style="width: 33%;"></td><td style="width: 33%; text-align: center; vertical-align: top;"> SP B </td></tr> <tr> <td></td><td style="text-align: center;"> <-----> </td><td style="text-align: center; vertical-align: top;"> IAM </td></tr> <tr> <td style="text-align: center; vertical-align: top;"> ADI </td><td style="text-align: center;"> -----> </td><td></td></tr> <tr> <td></td><td style="text-align: center;"> <-----> </td><td style="text-align: center; vertical-align: top;"> CLF </td></tr> <tr> <td style="text-align: center; vertical-align: top;"> RLG </td><td style="text-align: center;"> -----> </td><td></td></tr> </table>			SP A		SP B		<----->	IAM	ADI	----->			<----->	CLF	RLG	----->	
SP A		SP B															
	<----->	IAM															
ADI	----->																
	<----->	CLF															
RLG	----->																
TEST DESCRIPTION																	
1. 2. 3. 4.	<p>Make a call from SP B to SP A, but do not enter the final digit. Record message sequence using a signal monitor.</p> <p>CHECK A: WAS THE CORRECT TONE OR ANNOUCEMENT SENT TO THE CALLING SUBSCRIBER?....</p> <p>CHECK B: IS THE CIRCUIT IDLE?...</p> <p>CHECK C: WAS THE MESSAGE SEQUENCE AS ABOVE?.....</p> <p><i>Note</i> - It may be possible to confirm that the appropriate tone is returned to the calling party. In this case it must be verified tha the signalling point under test retransmis the signal received.</p>																

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER : 4.5.1																	
REFERENCE : Q.724 § 6.3																	
TITLE : CFL																	
SUBTITLE : CFL received																	
PURPOSE : To verify that the call will be immediately released by the outgoing signalling point if a call failure signal is received and the correct indication is given to the calling party																	
PRE-TEST CONDITIONS : Arrange the data in signalling point B such that a call failure signal is returned to the call request																	
CONFIGURATION : 1	TYPE OF TEST : VAT	TYPE OF SP : SP															
<p>EXPECTED MESSAGE SEQUENCE :</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; text-align: center;">SP A</td><td style="width: 40%;"></td><td style="width: 30%; text-align: center;">SP B</td></tr> <tr> <td>IAM</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td></td><td style="text-align: center;"><-----</td><td>CFL</td></tr> <tr> <td>CFL</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td></td><td style="text-align: center;"><-----</td><td>RLG</td></tr> </table>			SP A		SP B	IAM	----->			<-----	CFL	CFL	----->			<-----	RLG
SP A		SP B															
IAM	----->																
	<-----	CFL															
CFL	----->																
	<-----	RLG															
TEST DESCRIPTION																	
1.	Attempt to make a call from SP A to SP B. Record the message sequence using a signal monitor.																
2.	CHECK A: IS THE APPROPRIATE TONE OR ANNOUCEMENT RETURNED TO THE CALLING PARTY?.....																
3.	CHECK B: IS THE CALL IDLE?...																
4.	CHECK C: WAS THE MESSAGE SEQUENCE AS ABOVE?.....																
	<i>Note 1</i> - An address complete signal may be sent in the backward direction before a CFL signal is sent. <i>Note 2</i> - It may not be possible to confirm that the appropriate tone is returned to the calling party. In this case it must be verified that the signalling point under test retransmits the signal received.

TEST DESCRIPTION					
1.	Make a call from SP A to SP B. Record the message sequence using a signal monitor.				
2.	CHECK A: IS RINGING TONE HEARD?.....				
3.	Send a message which would be unreasonable at this point in the call (i.e COT) and confirm that message is discarded.				
4.	The called party should answer the call.				
5.	CHECK B: IS SPEECH POSSIBLE?....				
6.	SP B should send such a message which would be unreasonable at this point in the call (i.e ACM) and confirm that the message is discarded.				
7.	The calling point should clear the call.				
8.	CHECK C: IS THE CIRCUIT IDLE?.....				
9.	CHECK D: WAS THE MESSAGE AS SHOWN ABOVE.				

Note - This test covers only some of the ambiguous messages which could be received.

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER: 6.1.4		
REFERENCE: Q.724 § 6.1		
TITLE: Continuity check call		
SUBTITLE: Calling party clears during COT		
PURPOSE: To verify that the calling party can successfully clear during the continuity check phase of the call		
PRE-TEST CONDITIONS: Arrange the data in signalling point B such that a continuity check is applied on this call		
CONFIGURATION: 1	TYPE OF TEST: VAT	TYPE OF SP: SP
<div>EXPECTED MESSAGE SEQUENCE:</div> <div><div><div>SP A</div><div>IAM</div><div>Check tone</div><div>CLF</div></div><div><div>-----></div><div>-----></div><div>-----></div><div><-----</div></div></div> <div><div>SP B</div><div>RLG</div></div>		
TEST DESCRIPTION		
1.	Make a call from SP A to SP B. Record the message sequence using a signal monitor.	
2.	The calling party should clear the call during the continuity check phase.	
3.	CHECK A: IS THE CIRCUIT IDLE?.....	
4.	CHECK B: WAS THE MESSAGE SEQUENCE AS ABOVE?....	
5.	For validation testing repeat this test in the reverse direction.	

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER: 6.1.5					
REFERENCE: Q.724 § 7.3					
TITLE: Continuity check call					
SUBTITLE: Delay of through connect					
PURPOSE: To verify that the switching though of the speech path is delayed until the residual check-tone has propagated through the return of the speech path					
PRE-TEST CONDITIONS: a) The called termination is free b) Arrange the data in signalling point A such that a continuity check is applied on this call					
CONFIGURATION: 1	TYPE OF TEST: VAT and CPT	TYPE OF SP: SP			
EXPECTED MESSAGE SEQUENCE: <table style="width: 100%; border: none;"> <tr> <td style="width: 30%; vertical-align: top;"> SP A IAM Check tone COT Speech CLF </td> <td style="width: 40%; vertical-align: top; text-align: center;"> -----> ----- -----> <----- ----- <----- ----- -----> <----- </td> <td style="width: 30%; vertical-align: top;"> SP B ACM Ringing tone ANC Speech RLG </td> </tr> </table>			SP A IAM Check tone COT Speech CLF	-----> ----- -----> <----- ----- <----- ----- -----> <-----	SP B ACM Ringing tone ANC Speech RLG
SP A IAM Check tone COT Speech CLF	-----> ----- -----> <----- ----- <----- ----- -----> <-----	SP B ACM Ringing tone ANC Speech RLG			
TEST DESCRIPTION					
1.	Make a call from SP A to SP B. Record the message sequence using a signal monitor.				
2.	CHECK A: WAS THE CONTINUITY CHECK TONE HEARD BY EITHER CALLED OR CALLING PARTY?..				
3.	CHECK B: IS RINGING TONE HEARD?.....				
4.	The called party should answer the call.				
5.	CHECK B: IS SPEECH POSSIBLE?...				
6.	The calling party should clear the call.				
7.	CHECK C: IS THE CIRCUIT IDLE?...				
8.	CHECK D: WAS THE MESSAGE SEQUENCE AS SHOWN ABOVE?.....				
9.	For validation testing repeat this test in the reverse direction.				

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER: 6.1.6		
REFERENCE: Q.724 § 7.3		
TITLE: Continuity check call		
SUBTITLE: COT unsuccessful		
PURPOSE: To verify that a repeat attempt of the continuity check is made on the failed circuit		
PRE-TEST CONDITIONS: Ensure that no backward tone is detected within the specified timeout		
CONFIGURATION: 1	TYPE OF TEST: VAT	TYPE OF SP: SP
<div>EXPECTED MESSAGE SEQUENCE:</div> <div><div><div>SP A</div><div>IAM</div><div>Check tone</div><div>CCF</div><div>T9</div><div>CCR</div><div>Check tone</div><div>CCF</div><div>T10</div><div>CCR</div><div>Check tone</div></div><div><div>-----></div><div>-----> </div><div>-----></div><div>-----></div><div>-----></div><div>-----> </div><div>-----></div><div>-----></div><div>-----></div><div>-----> </div></div><div><div>1-10 seconds</div><div>1-3 minutes</div></div><div><div>SP B</div><div>Maintenance staff alerted</div></div></div>		
TEST DESCRIPTION		
1.	Initiate the continuity test call procedure at SP A. Record the message sequence using a signal monitor.	
2.	CHECK A: WAS THE SECOND CONTINUITY CHECK INITIATED WITHIN 1 TO 10 SECONDS?....	
3.	CHECK B: WERE THE MAINTENANCE STAFF ALERTED ON FAILURE OF THE SECOND CONTINUITY CHECK?....	
4.	CHECK C: WAS THE CHECK REPEATED AT INTERVALS OF 1 TO 3 MINUTES?....	
5.	CHECK D: WAS THE MESSAGE SEQUENCE AS ABOVE?....	
	Note 1 - The repeated check will only finish when continuity is detected.	
	Note 2 - On failure of the COT an automatic repeat attempt will be made -see test No. 6.2.5

	<-----		RLG																																																																
TEST DESCRIPTION																																																																			
1.	Make a call for SP A to SP B. Record the message sequence using a signal monitor.																																																																		
2.	CHECK A: IS RINGING TONE HEARD?....																																																																		
3.	The called party should answer the call.																																																																		
4.	CHECK B: IS SPEECH POSSIBLE?....																																																																		
5.	The calling party should clear the call.																																																																		
6.	CHECK C: IS THE CIRCUIT IDLE?....																																																																		
7.	CHECK D: WAS THE MESSAGE SEQUENCE AS ABOVE?....																																																																		
	Note - The message sequence may not be as shown above.																																																																		

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER: 6.2.5																																															
REFERENCE: Q.724 § 6																																															
TITLE: Automatic repeat attempt																																															
SUBTITLE: Continuity check failure																																															
PURPOSE: To verify that an automatic repeat attempt will be made if on continuity check failure																																															
PRE-TEST CONDITIONS: Arrange the data in signalling point B such that check tone is not returned within the specified limits to the first call request																																															
CONFIGURATION: 1	TYPE OF TEST: VAT	TYPE OF SP: SP																																													
<p>EXPECTED MESSAGE SEQUENCE:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; text-align: center;">SP A</td><td style="width: 40%;"></td><td style="width: 30%; text-align: center;">SP B</td></tr> <tr> <td>IAM</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td>Check tone</td><td style="text-align: center;">----- </td><td></td></tr> <tr> <td></td><td style="text-align: center;"> -----</td><td></td></tr> <tr> <td>CCF</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td colspan="3" style="text-align: center; padding-top: 10px;">A repeat of the continuity check of the failed circuit will be made within 1-10 seconds see Q.724 Section 7.3</td></tr> <tr> <td>IAM</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td>Check tone</td><td style="text-align: center;">----- </td><td></td></tr> <tr> <td></td><td style="text-align: center;"> -----</td><td></td></tr> <tr> <td></td><td style="text-align: center;"><-----</td><td style="text-align: center;">ACM</td></tr> <tr> <td></td><td style="text-align: center;">-----</td><td style="text-align: center;">Ringing tone</td></tr> <tr> <td></td><td style="text-align: center;"><-----</td><td style="text-align: center;">ANC</td></tr> <tr> <td>Speech</td><td style="text-align: center;">-----</td><td style="text-align: center;">Speech</td></tr> <tr> <td>CLF</td><td style="text-align: center;">-----></td><td></td></tr> <tr> <td></td><td style="text-align: center;"><-----</td><td style="text-align: center;">RLG</td></tr> </table>			SP A		SP B	IAM	----->		Check tone	-----			-----		CCF	----->		A repeat of the continuity check of the failed circuit will be made within 1-10 seconds see Q.724 Section 7.3			IAM	----->		Check tone	-----			-----			<-----	ACM		-----	Ringing tone		<-----	ANC	Speech	-----	Speech	CLF	----->			<-----	RLG

TEST DESCRIPTION																																															
1.	Make a call for SP A to SP B. Record the message sequence using a signal monitor.																																														
2.	CHECK A: IS RINGING TONE HEARD?.....																																														
3.	The called party should clear the call?....																																														
4.	CHECK B: IS SPEECH POSSIBLE																																														
5.	The calling party should clear the call.																																														
6.	CHECK C: IS THE CIRCUIT IDLE?....																																														
7.	CHECK D: WAS THE MESSAGE SEQUENCE AS ABOVE?...																																														
	<i>Note</i> - The message sequence may not be as shown above.																																														

TUP LEVEL 4 TEST SPECIFICATION

TEST NUMBER: 6.3.1																										
REFERENCE: Q.724 § 2.5																										
TITLE: Dual seizure																										
SUBTITLE: Dual seizure for controlling side																										
PURPOSE: To verify that on detection of dual seizure, the call initiated by the controlling signalling point is completed																										
PRE-TEST CONDITIONS: Arrange the signalling point data such that SP B is the controlling signalling point																										
CONFIGURATION : 1	TYPE OF TEST: VAT	TYPE OF SP: SP																								
<p>EXPECTED MESSAGE SEQUENCE:</p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; width: 30%;">SP A</th><th style="width: 40%;"></th><th style="text-align: right; width: 30%;">SP B</th></tr> </thead> <tbody> <tr> <td>IAM</td><td style="text-align: center;">-----> <-----</td><td>IAM</td></tr> <tr> <td>ACM</td><td style="text-align: center;">-----> <-----</td><td></td></tr> <tr> <td></td><td style="text-align: center;">-----> <-----</td><td>Ringing tone</td></tr> <tr> <td>ANC</td><td style="text-align: center;">-----> <-----</td><td></td></tr> <tr> <td>Speech</td><td style="text-align: center;">-----> <-----</td><td>Speech</td></tr> <tr> <td>CLF</td><td style="text-align: center;">-----> <-----</td><td></td></tr> <tr> <td></td><td style="text-align: center;"><-----> <-----</td><td>RLG</td></tr> </tbody> </table>			SP A		SP B	IAM	-----> <-----	IAM	ACM	-----> <-----			-----> <-----	Ringing tone	ANC	-----> <-----		Speech	-----> <-----	Speech	CLF	-----> <-----			<-----> <-----	RLG

	<-----> <-----	RLG																								
TEST DESCRIPTION																										
1.	Simultaneously transmit an IAM (containing the same value of cic) from each end of the link for a both way circuit. Record the message sequence using a signal monitor.																									
2.	CHECK A: IS RINGING TONE HEARD ON THE CALL ORIGINATED FROM SP B?....																									
3.	The called party at SP A should answer the call.																									
4.	CHECK B: IS SPEECH POSSIBLE?...																									
5.	The calling party at SP B should clear the call.																									
6.	CHECK C: IS THE CIRCUIT IDLE?.....																									
7.	CHECK D: WAS THE MESSAGE SEQUENCE AS ABOVE?....																									
8.	CHECK E: WAS A REPEAT ATTEMPT MADE BY SP A ON ANOTHER CIRCUIT?....																									
9.	Repeat this test in the reverse direction.
