SERIES T: TERMINAL EQUIPMENT AND PROTOCOLS FOR TELEMATIC SERVICES

DOCUMENT APPLICATION PROFILE FOR VIDEOTEX INTERWORKING

Reedition of CCITT Recommendation T.504 published in the Blue Book, Fascicle VII.7 (1988)

NOTES

1 CCITT Recommendation T.504 was published in Fascicle VII.7 of the *Blue Book*. This file is an extract from the *Blue Book*. While the presentation and layout of the text might be slightly different from the *Blue Book* version, the contents of the file are identical to the *Blue Book* version and copyright conditions remain unchanged (see below).

2 In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

DOCUMENT APPLICATION PROFILE FOR VIDEOTEX INTERWORKING

1 Scope

1.1 This Recommendation defines a document application profile which conforms to T.400 Series of Recommendations.

Its purpose is to specify a document architecture level and a content architecture level, and to select an interchange format class suitable for videotex interworking as defined in configuration 1 of Recommendation F.300 and in Recommendation T.564.

2 Field of application

This Recommendation defines a document that is in conformance with the T.400 Series of Recommendations and that allows interworking between two videotex services using configuration 1 defined in CCITT Recommendation F.300 and Recommendation T.564. The videotex documents are interchanged only in a formatted form, allowing the recipient to reproduce them as intended by the originator.

This document application profile is defines the features of the document structure that can be interchanged.

4 Definitions

The definitions of T.400 Series of Recommendations apply also to this Recommendation.

5 Characteristics supported by this document application profile

5.1 *Overview*

A videotex document is the information that is retrieved by a single user function and presented as a complete entity. Therefore the purpose of this document application profile is to allow the recipient to image the layout of the interchanged document as intended by the originator.

This section specifies the functional description of the features supported by this document application profile.

5.2 Logical characteristics

Not used.

5.3 *Layout characteristics*

5.3.1 Layout document structure

At a given time a document contains one single page which contains one or more blocks.

The content of the block is:

"Videotex» content.

5.3.2 *Document structure elements*

5.3.2.1 Page format

The page format is expressed in accordance with the definition of the videotex service or videotex terminal, by using scaled measurement units. The relation between BMUs and SMUs is specified in the document profile.

5.3.2.2 Block size

The position and the dimension of the blocks are restricted to be equal to those of the page. Block size not equal to page is for further study.

6 Definition of the document application profile

6.1 *Overview*

6.1.1 Document architecture level

The document application profile makes use of document architecture class FDA as defined in Recommendation T.412.

The document architecture level includes the following structure:

a specific layout structure.

The document architecture level is defined in Tables 1/T.504, 2/T.504 and 3/T.504.

6.1.2 *Content architecture level*

The content architecture level that may be used in documents conforming to this document application profile is as follows:

– "Videotex"

Details are specified in Recommendation T.101.

6.2 Document profile level

The document profile level used in this document application profile is defined in Table 4/T.504. Every document interchanged in accordance with this document application profile must include a document profile.

6.2.1 Interchange format class

The interchange format class used in this document application profile is "B" as defined in Recommendation T.415.

6.2.2 *Definition of document structure*

The document structure contains a specific layout structure. The number of hierarchical levels is 3, namely:

- document layout root;
- page;
- block.

All these levels are mandatory.

At most one content portion can be associated with one block.

6.3 *Specification of attributes*

The attributes applicable to constituents of the layout structure are defined in Tables 1/T.504 and 2/T.504, using the following notation:

- --- attribute not applicable;
- m attribute is mandatory;
- nm attribute is non-mandatory;
- d attribute is defaultable;
- * exceptionally not used by this document application profile.

3

TABLE 1/T.504

Attributes applicable to layout objects

Attribute	Document layout root	Page	Block
Shared attributes			
 Object type Object identifier (Note 1) Subordinates Content architecture class Default value list Application comments 	m m * nm 	m m d 	m m d d
 Position (Note 2) Dimensions (Note 2) Page position Medium type 	 	 đ đ	ď d

Note I – According to the specifications of Recommendation T.412 this attribute may be omitted if the value can be derived unambiguously from the transmission sequence of the relevant objects.

Note 2 – For the block, the value of the attributes position and dimensions is restricted to those of the page. Using other values is for further study.

TABLE 2/T.504

Attributes applicable to content portions

Attribute	Content portion
- Content identifier layout (Note 1)	m
- Type of coding	d
- Coding attributes (Note 2)	d
- Content information (Note 2)	đ

Note I – According to the specifications of Recommendation T.412 this attribute may be omitted if the value can be derived unambiguously from the transmission sequence of the relevant objects and content portions.

Note 2 – The use of these attributes applicable to content portions is specified in Recommenda-tion T.101.

TABLE 3/T.504

Attribute values for layout objects

Attribute	Basic value	Default value	Non-basic value
Shared attributes			
Object type	Document layout root	None	None
	Page Block		None None
Object identifier	See Rec. T.412	None	None
Content architecture class	Videotex content architecture		None
Default value lists	See Table 5/T.504	None	None
Application comments	See Rec. T.564	See Table 6/T.504	None
Layout attributes	•		
Position	See Rec. T.412 and Notes 1 and 2	(0,0)	None
Dimensions	See Rec. T.412 and Notes 1 and 2	(40,24)	None
Page position	See Rec. T.412 and Note 1	(0,0)	None
Medium type	See Rec. T.412	(40,24), unspecified)	None

Note I – Positions and dimensions are specified by using scaled measurement units. The unit scaling factor is defined by the attribute "unite scaling" within the document profile. The "nominal page size" within the attribute "medium type" defines the number of rows and columns to be imaged on the screen by the videotex application in terms of SMUs.

For the block, the position and dimensions are those of the page.

Note 2 – It has to be taken into account that within the national videotex systems the position is usually determined by (1,1).

5

TABLE 4/T.504

Document profile descriptor

Data element name	Class	Value	Comments
Document profile descriptor Specific layout structure	M m	1	Presence of specific layout structure
Document characteristics Document application profile	M m	018160	Object identifier
Document application profile default	m		See Note 1
Document architecture class	m	1	FDA
Content architecture classes	m	0 1 8 16 3	Object identifier
Interchange format class ODA version Unit scaling	m m m	"B"	
Document management attributes	NM		See Note 2
Title Document date and time Owners Document reference Additional information	רות רוח רוח רוח רוח		

Note l – Default values differing from those defined in T.412 are specified for the attributes (see Table 3/T.504):

- content architecture class;
- dimensions;

- page position;
- medium type.

Note 2 – The relation specified by this attribute is not taken into account within the videotex interworking application. It is used when printing on paper of a videotex page is intended.

TABLE 5/T.504

Default attributes that may be specified in a default value list

Object type	Defaultable attribute
Page	Dimensions Page position Application comments
Block	Object identifier Presentation attributes Dimensions Position Application comments
Content portion	Type of coding Coding attributes Content information

TABLE 6/T.504

Default values for application defined attributes defined in Recommendation T.564 and mapped to the attribute application comments defined in Recommendation T.412

List of attributes	Default value
Block: Display-indication	"Mandatory"

ANNEX A

(to Recommendation T.504)

Summary of ASN.1 object identifiers

This Annex is an integral part of this Recommendation.

ASN.1 object identifier value	Description	Section
0 1 8 16 0	Object identifier for this document application profile	Table 4/T.504, § 6.3
