TITLE : New work item on H.320 adaptation to ATM

PURPOSE : *Information*

During the last meeting in Ipswich, adaptation (or extension) of existing H.320 terminals to ATM environments has been identified and discussed.

Although this item is not included in the term of references of our group, the short term interest to study H.320 adaptation has been recognized.

Consequently, ETSI NA5/VCM members agree to include this new work item in the studies of the "Expert Group". The target date to complete this recommendation should be 1994.
