The Russian satellite operator Gazprom Space Systems (GSS), formerly Gascom, was established in 1992. GSS's orbital fleet: Yamal 100 and Yamal 201 at 90E, and Yamal 202 at 49E. GSS's ground infrastructure: four teleports in Moscow and the Moscow region. Main activities: Yamal satellites capacity provision and, within Russia, satellite telecommunication services and system integration. The company has more than 200 clients in Russia and abroad - one fourth of GSS's profits come from the international market. The company currently builds Yamal-300K and Yamal-400 satellites. This year, GSS was selected by WTA as Corporate Teleport Operator of the Year.

See our breakthrough technology - that allows Telcos to get up to 400 Mbps bandwidth over existing twisted-pair copper telephone cabling to rural & urban customers at 1/20th the cost of optical fibre deployment in urban and 1/100 to rural - at booth #5163. Bonded DSL Rings® (BDR) from www.genesistechsys.com uses existing telecoms standards, including G.Bond, Resilient Packet Rings (RPR) and VDSL2. BDR provides the tools (Quality of Service and Efficient Multicast) for bandwidth efficiency/optimization and managed services. BDR uses less carbon footprint while delivering higher bandwidth. Also, BDR can resolve call hand-off issues between adjacent Femtocells easing wireless Femtocell deployment.

GEOIMAGE simplifies access to digital maps worldwide. Since its creation in the eighties, GEOIMAGE has been one of the world's top 10 technology suppliers of earth observation image processing and mapping. Specialized in the telecoms industry, we provide a large range of digital maps for RF planning. We work with major mobile operators and equipment vendors. Our values are quality of products and services, transparency and reactivity. If you want to save time and money, trust GEOIMAGE. We are the leaders of 3D digital databases dedicated to new-generation networks such as WiMAX, 3G and UMTS. Ask us for information!
