Manifone is an innovative Voice over IP solution provider extending the reach and capabilities of existing VoIP systems. The flexible voice interconnection technology of Manifone allows multinational companies to let mobile and travelling staff access their existing telephony VPNs from their mobile phones, even when abroad, resulting in substantial savings on mobile phone bills. Using the proven Manifone technology, VoIP operators can leverage new markets by providing their existing VoIP services to anyone with a mobile or fixed-line phone. Manifone's solutions work in a fully transparent way, without modification of existing VoIP infrastructure, mobile operator or handset.

Since 1986, Marben Products has been supplying portable software solutions that meet standards to telco manufacturers and carriers. Our solutions are Marben GMPLS (implementation of control plane protocols and applications compliant with both IETF and ITU-T/OIF ASON standards), Marben Diameter (a suite of AAA protocols for authentication, QoS management and charging in next-generation IP fixed and wireless broadband networks including DSL, LTE, IMS, WiMax, CDMA2000) and Marben ASN.1 (tools for highly efficient data encoding/decoding in UMTS, LTE, IN signaling, as well as in billing and network management).
