There is no innerduct like it. It's flexible. It's multi-celled. And it's changing the network construction industry. MaxCells fabric innerduct, unlike rigid ones, makes the most of available space by conforming to the shape of your cable. Compared to rigid innerducts, MaxCell allows network owners and builders to increase their cable density by as much as 300% and reduce labour costs by 33%. It maximizes space, minimizes costs and allows overlay without breaking new ground. MaxCell gives you more of what you need and less of what you don't.
