NetGuardians, a multi-award winning specialist in Security Information and Events Management (SIEM), combines business pragmatism with innovation to provide insights into IT infrastructure performance and security, while also improving transparency, accountability and regulatory compliance. The NG-Screener is a genuine Plug & Play SIEM appliance designed from the bottom up as a practical tool for managing IT security. It collects and collates audit trails (logs) to present a real-time operational overview of infrastructure integrity. Long-term data storage and precise forensic tools offer powerful analysis capabilities to both, ground level operators and high-level strategists.

Network Telecom, founded in 1999, is the network and telecommunication industry's leading publication in China. Its reputation was built on a combination of authoritative editorial content and quality circulation in China and abroad. It publishes a bi-weekly e-magazine targeting decision-makers in China's network and telecommunication industries, organizes the yearly "top 10 competitive enterprises in the optical communication field in China" and publishes a competitiveness report. Network Telecom is fast becoming the most authoritative and influential media in the optical communication field in China.
