NetworkMining provides network business intelligence software to telecommunications service providers. Network business intelligence helps service providers to unlock the value of their network resource data stored in network and inventory management systems. Network business intelligence turns network resource data into actionable information. Our solutions are based on NetworkObjects, an advanced query, reporting and analysis software specifically designed for telecommunications network inventories. Users of NetworkObjects are primarily with network engineering and operations departments and perform a broad range of tasks that require in-depth knowledge and intelligence about the network. Our application space ranges from visual network exploration towards strategic network analysis.

NEW ARTEL was incorporated as a private limited Company in 27/07/2001 and started its operations in October 2002 but in May 2007, New Artel started operating as a government company. It has the goal of providing Telecommunication services in order to take in the country's plan of ICT development towards the attainment of Rwanda's vision 2020. New Artel operates an iDirect 51F hub with small vsat terminal operated on C Band on Intelsat 907. This makes it much easier for Artel to provide bandwidth anywhere in the country and even in the region at anytime.
