NHK is Japan's sole public broadcaster, funded by fees collected from every household in the country. Through its five TV and three radio channels, NHK reaches about 50 million households throughout Japan. Internationally, NHK operates a radio service in 18 languages and two TV services under the NHK World umbrella. NHK has a network of 30 locations around the world. The large number of in-house production staff enables NHK to produce a vast genre of programmes from news, documentaries, children's programmes, to music, entertainment, etc. As a pioneer of HDTV, NHK makes 90% of its major programmes in HDTV.

NICT is Japan's sole national research institute in the field of information and communication technology (ICT). NICT supports national ICT policies from a technological standpoint and cooperates with academia, industries and overseas research institutes. NICT conducts R&D in the ICT field with the objective of supporting the future ubiquitous network society. NICT also acts as a funding agency supporting a variety of R&D projects carried out by academia and industry. Moreover, NICT supplies standard time and wave frequencies and collects and stores data obtained from observations of the ionosphere and solar activity, which it releases into the public domain.
