The Russian Radio Frequency Service ensures the proper use of radio frequencies, radio electronic facilities and high-frequency devices of civil usage throughout the territory of the Russian Federation. It carries out radio monitoring and helps provide providing international legal protection to radio frequency assignments. Corporate Telecommunication Network, deployed on the territory of the Russia, consolidates information, technology and intellectual resources of RF centres in seven federal areas. The application of new information technologies, technological facilities and skilled technical experts allows enterprises of the radio frequency service to provide a wide range of services to radio frequency spectrum users.
