Raisecom specializes in the field of optical broadband access and the following technologies: convergence of fiber optic technology, Ethernet, and broadband access. Since its foundation in 1999, Raisecom has been developing in a fast pace for consecutive years, and has become the key vendor of access equipment in China. Quality products, proved performance and perfect service are cornerstones of Raisecom's development. Its products obtained ISO9001:2000 certification. Additionally, an optimum localization service mechanism has been introduced to address telecom operators' requirements in terms of large scale and complicated environments, and the company also offers tailored products and a comprehensive customer service.

Redwood Technologies is a leading manufacturer of converged communications platforms. Redwood's DNX®/RTSinfonia® product family combines mass-scale IVR, SMS, MMS and multimedia switching to create complete telco solutions including contact centre optimization, IP Centrex, televoting, conferencing and real-time billing. Founded in 1993, Redwood supplies carriers and service providers in over 60 countries, across more than 1,000 installations. Redwood also supports many direct clients in government, financial services and broadcast media. Redwood's innovative STORM(tm) business model allows suitably qualified telcos to enter into national partnerships with Redwood, enabling provision of Redwood's ground-breaking solutions to end users through Software as a Service (SaaS).
