Siradel's business comprises three segments: radio expertise: Siradel's know-how in the area of radiowave propagation relies not only on excellent knowledge of the theory of propagation but also on solid operational experience in the area of measurements and model tuning. "Volcano" software: propagation model for radio network planning (the volcano engine implements advanced propagation models to address the simulation of radiowave propagation). Geographic data: this part of the business stems from our radio expertise and benefits the telecoms industry. We also have set up one database with large coverage and are now approaching new applications.
