Founded in 1976 by the 21 Member States of the Arab League, Arabsat has been serving the growing needs of the Arab world for over 30 years. Now ranked as one of the world's ten largest satellite operators and by far the leading satellite services provider in the Arab world, it reaches millions of homes in over 80 countries with 164 million viewers across the Middle East, Africa, Europe and beyond. Operating a growing state-of-the-art fleet at the 26°E and 30.5°E positions of the geostationary orbit, Arabsat is the only satellite operator in the MENA region offering the full spectrum of broadcast, telecoms and broadband services. This translates to the highest possible reliability with a soon-to-be-unrivalled in-orbit backup, as well as more space capacity than any other player in the region, for more TV and radio broadcast services, professional data network solutions, telephony and IP-trunking backbone connectivity, and broadband Internet access for media and entertainment companies, corporate customers and government entities. This capacity will continue to expand with the launch of one new satellite every year from 2009 to 2012, making the Arabsat satellite fleet the youngest in the region. www.arabsat.com.
