ATDI offers a range of complementary software applications that meet the spectrum management and radio planning requirements of regulators, operators, broadcasters, equipment manufacturers, and integrators. ATDI's solutions support all wireless technologies, including WiMax, digital and analogue broadcast, PMR, mobile, microwave and satellite, as well as regulatory processes: licensing, billing, type approval, complaints management, etc. ATDI also provides digital maps, consultancy services and customized software to meet your increasingly sophisticated radioplanning needs. With close to twenty years of commitment to excellence, hundreds of customers around the world and offices in some ten countries, ATDI is the most global provider of radioplanning solutions.

Automation, Belgian leader in power management solutions, is presenting on its booth two of its most rapidly growing solutions: the mobile datacentre and the site monitoring software. We have successfully deployed more than 600 mobile sites and more than 15,000 nodes are being monitored by our software. Automation aims to be an expert partner for its customer in the management of electrical power by delivering highly qualitative power management solutions, with the following objectives: reducing TCO; increasing availability; rendering daily operations easier while increasing agility; and integrating environment concerns.
