The DIGITALK multiservice platform enables fixed, wireless and mobile operators to roll out advanced services rapidly and profitably. The DIGITALK multiservice platform offers a highly scalable, high-performance, high-availability service delivery platform, operating from a small footprint solution to a large-scale multi-node deployment. The multiservice platform can be deployed in pure IP environments using media application servers or using intelligent switches where operators are connecting to TDM and IP networks. Service-ready applications include: prepaid calling cards, broadband telephony, IP virtual office, service numbers and prepaid mobile.
