Exicom Tele-Systems is a leading manufacturer and supplier of telecoms power products and associated solutions such as SMPS power plants, end-to-end integrated BTS power solutions, battery health monitoring and management systems, etc. with ISO 9000 certified operations. Our new range of products have slashed operational expenditure by more than 20% while at the same time providing higher efficiency, enriched features and seamless expandability into the future. Exicom is committed to achieving the highest standards in product development (including wind and solar), manufacturing and marketing of world-class products for indigenous as well as international markets. Exicom Tele-Systems also designs and manufactures high-capacity microwave equipment for network operators and service providers worldwide. Our state-of-the-art radios offer full flexibility to carry traditional TDM traffic and also to upgrade to all IP network in the coming future. Create a reliable, scalable and high-speed backhaul network that, as a network operator, you always demanded. A mix of strong and earthy values, simple upbeat service deliveries to separate this firm from others, and the production of a very sophisticated range of products have led to a very direct, confident corporate stance that continues to be the centerpiece of each product that is produced.
