

The background of the page features a high-contrast, artistic photograph. It shows the silhouettes of two individuals, likely a man and a woman, positioned on the left and right sides of the frame. They are facing each other, with their heads tilted slightly, creating a sense of connection and dialogue. The lighting is dramatic, with the subjects' faces mostly in shadow, while the background is a bright, warm glow, possibly from a window or a light source behind them. The overall mood is professional yet human.

About Ernst & Young's Global Telecommunications Center

Telecommunications operators are facing the challenges of growth, convergence, business transformation, technological change and regulatory pressures in increasingly difficult economic conditions. Operators choose Ernst & Young because they value our industry-based approach to addressing their assurance, tax, transaction and advisory needs. They know that they've much to gain from our clear understanding of the opportunities, complexities and commercial realities of the telecommunications industry – wherever in the world they're operating.

What gives us this understanding is our Global Telecommunications Center. Operating from Paris, Cologne, Johannesburg, Beijing, Delhi and San Antonio, the Center brings together people and ideas from across the world, to help our clients address the challenges of today – and tomorrow. Our clients benefit from our insights on key trends and emerging issues. These may relate to the economic downturn, next-generation services, infrastructure sharing, outsourcing, revenue assurance, operational efficiency, regulations, future growth markets or mergers and acquisitions. We help our clients react to trends in a way that improves the financial performance of their business.
