TITLE : SIMULATIONS RESULTS OF PROPOSAL 30
PURPOSE : INFORMATION

The aim of this document is to apologize for the simulations results we presented at Kurihama (proposal 30). It has appeared that there was a bug on the D1 tape we have sent to JVC : each field was inverted. "*Mobcal at 9 Mbit/s*" was the only sequence which has been recorded in a proper way. It is clear that JVC is not at all responsible for that.

Therefore we would like to present you at this meeting the exact results provided by our scheme and to point out the fact that the results of the subjective tests are not relevant for our six other sequences.
