

International Telegraph and Telephone
Consultative Committee (CCITT)

Study Group XV - Experts Committee on Visual Telephony

SOURCE: Compression Labs Incorporated

TITLE: Part 3 CCITT Recommendation H120 H130

DATE: April 19, 1985

After extensive investigation and careful consideration, Compression Labs Inc. has elected not to submit a description of its proprietary coding algorithms to the CCITT Committee recommending NTSC standards at 1.5 Mbps (Rec. H120 and H130). CLI's participation in Committee activities to date has been indicative of the company's philosophical support for standards in general. At this time, however, it is CLI's view that continued participation in this particular CCITT process does not best serve the industry.
