### **Congo (country code +242)**

Communication of 5.II.2002:

The *Office National des Postes et Télécommunications (ONPT), Direction Générale*, Brazzaville, announces the draft new numbering plan which it intends to apply in the Republic of the Congo.

- Current situation

The current national numbering plan (NNP) is a uniform closed six-digit system with the format PQMCDU for all subscribers, both fixed and mobile. There are thus 900 000 numbers available in all, with P = 1 being used for type 1X special services.

The subscriber number being the same as the national number, no special prefixes are used for trunk calls or for calls between fixed network subscribers and mobile network subscribers. The prefix 00 is used for international calls.

The current numbering plan is occupied as follows:

<i>Operator</i>	<i>Number of registered subscribers</i>	<i>Prefix used</i>	<i>Theoretical capacity</i>	<i>Occupation rate</i>
ONPT	20 000	8 – 9	200 000	10%
CELTEL	100 000	2, 3, 5	230 000*	43%
LIBERTIS	45 000	6	100 000	45%
CYRUS	2 000	4	100 000	2%

\* Reduced capacity owing to ONPT automatic exchange special services.

- New seven-digit numbering plan

The proposed seven-digit numbering plan has a BPQMCDU structure in line with ITU-T Recommendations and takes account of the population size (approximately 3 000 000 inhabitants) and current telephone density.

The principles of the existing system are maintained. A telephone call to any subscriber anywhere on the national network requires only that the seven-digit number assigned to the subscriber in question be dialled.

The plan provides a capacity of approximately 10 000 000, taking into account the special numbers, including 9 000 000 subscriber numbers which will amply cover the needs of all telecommunication operators since the digital segment will not be deemed saturated until approximately 70% of the numbers are connected or assigned.

No physical extension will be needed for the new plan since it will suffice to add the seventh digit (B) to any subscriber number currently in use.

The numbering plan is not designed to be immutable once completed and approved. In order to keep it up to date it will be essential to keep track of demographic and social data and of anticipated demand, which constitutes the basis of its design.

However, the digits 0 and 9 are free and may be assigned to any mobile operators indicating a need for them in the event of the increase in demand exceeding that foreseen.

#### Distribution of prefixes at the national level
