

ITU Asia-Pacific Regional Development Forum Session 1: Harnessing Digital Opportunity through Broadband

29 April 2013 Phnom Penh, Cambodia

Doan Quang HOAN hoandq@rfd.gov.vn

Director General

Authority of Radio Frequency Management of S.R. of Viet Nam

Agenda

- Objective: Spectrum availability and efficiency for wireless broadband and digital dividend
- Challenges
- Comments

Mobile broadband market

3G Investment ~ 2 Bil. USD 4 operators Ve lai theo phong cach GE

Takes around 24 months to gain momentum

Mobile traffic growth

Vietnam's contribution to ITU-R 5D model

Exponential model is recommended

Challenge

Social factors

Commuting

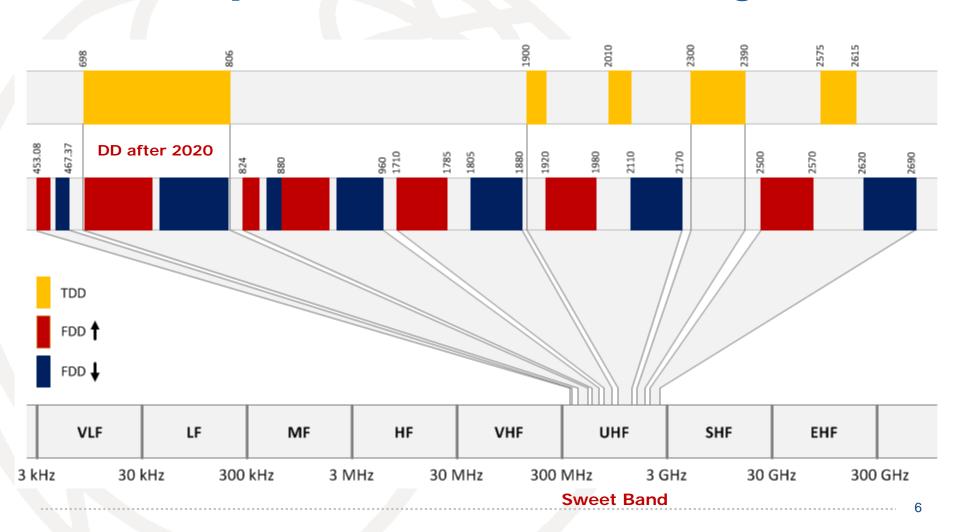

- Highly competitive markets
 - ARPU: VN < \$5; Japan ~ \$58.46; Korea ~ \$34.20;</p>
 - > Transportation characteristic.
- GDP below average
 - Low demand on devices (smart phones, services).
- User's behavior is adapting gradually
 - > E-banking, E-business,... are still not widely used.
- Lack of local contents

Basic phones are used significantly

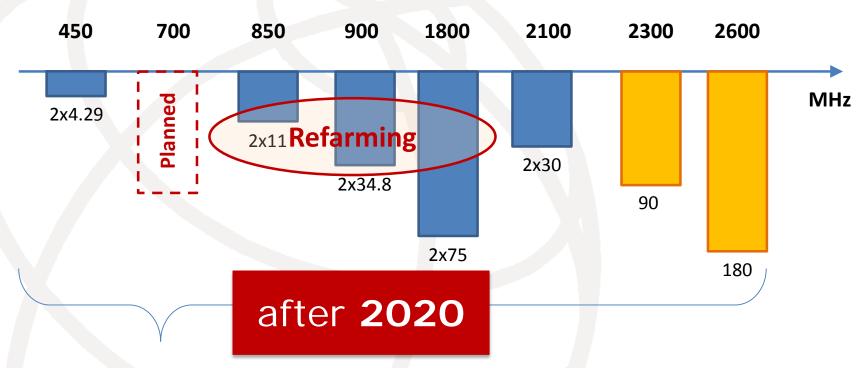

Spectrum availability

Refarming KEY bands

Total bandwidth:

640.18 MHz

	IMT-2000
Lower user density	440 MHz
Higher user density	560 MHz

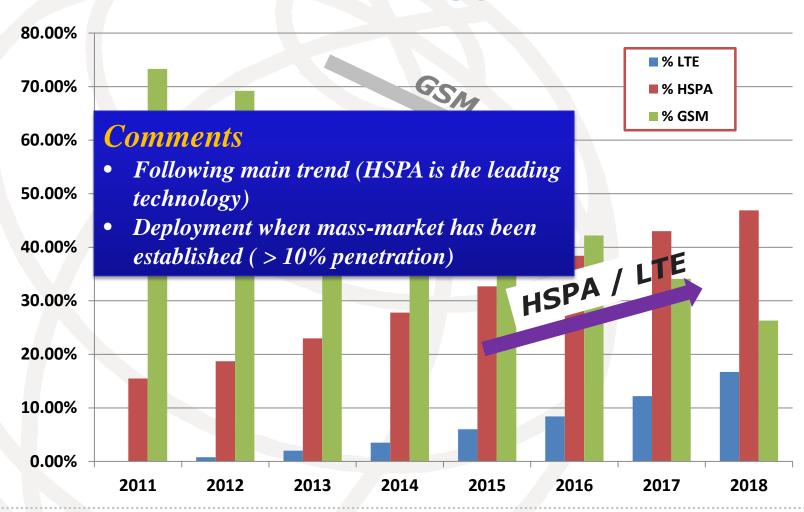

Digital Dividend

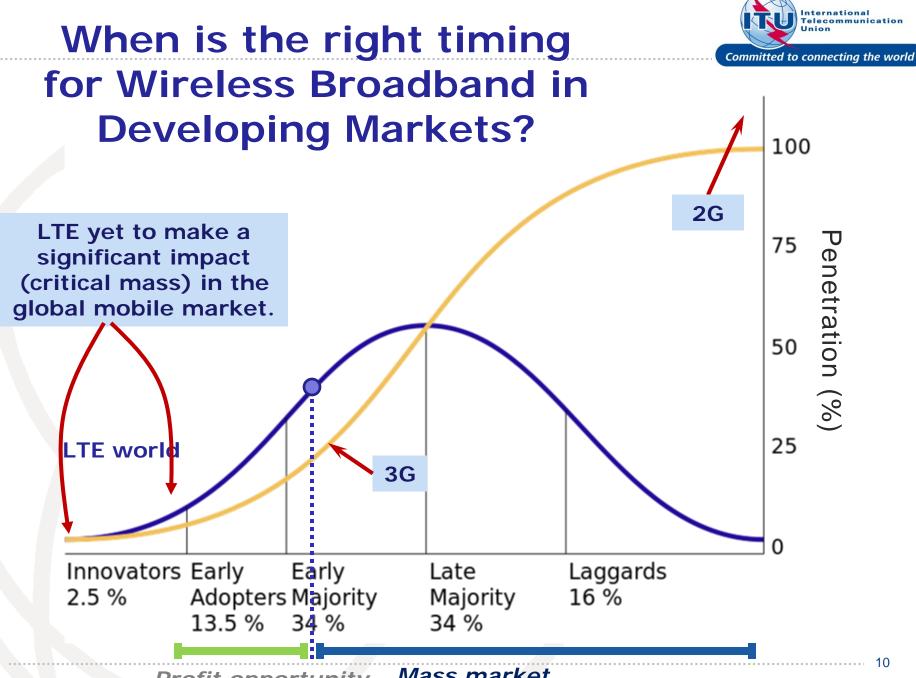

Technology Trend

Comments on Spectrum Management

- Market forecast is crucial for successful mobile broadband deployment:
 - Mobile traffic growth;
 - Spectrum demand;
 - Time to open spectrum band(s).
- Number of operators should be managed carefully to:
 - To foster healthy competition;
 - To growth market.

Comment on Spectrum Management

- Social factors should be considered
 - seriously:
 - User behavior;
 - > ARPU vs. GNI.
- Global/regional bands plan harmonization:
 - Economic of scale;
 - Competition to reduce price;
 - Greatest economic benefit.
