Tatsuo Shibata

Cable television in Japan

Japanese cable television started 4K RF broadcast service on QAM channel in December 2015, which was followed by 4K IP Linear service of the same content starting April 2016.

In addition, 4K and 8K commercial broadcasting services will start in December 2018 on the Japanese Broadcasting Satellite. To rebroadcast these services over cable television, Japan Cable Laboratories have developed operational specifications for cable headend and STB.

In this presentation JLabs would introduce the related services and technologies together with ITU-T recommendations led by Japan in SG9.
