

PUBLIC PRIVATE PARTNERSHIP APPROACH TO FIGHT ILLEGAL DEVICES

Second ITU-T Study Group 11 Regional Workshop for Africa on "Counterfeit ICT Devices, Conformance and Interoperability Testing Challenges in Africa"

TUNIS, 23 APRIL 2018

DR ABDELWAHAB ZRAMDINI abdelwahab.zramdini@cotecna.com

MAIN CHALLENGES FOR THE AUTHORITIES

SECURE REVENUE

- Increase tax revenue directly by eliminating illegal imports of mobile devices
- > Empower legitimate importers of devices, thus reduce risks of tax avoidance
- > Reduce operating costs for mobile operators

PROTECT CONSUMERS

- > Tighten controls over substandard mobile devices posing health risks on consumers
- > Protect consumers against counterfeit products
- > Enhance quality of service provided by mobile operators, thanks to a more efficient network

REINFORCE GOVERNANCE

- > Contribute to e-Government services
- > Measure performance (KPIs)
- > Enhance integrity and transparency
- > Access advanced data analysis

ENHANCE NATIONAL SECURITY

- > Tighten controls over subscribers access to the network
- Significantly contribute to the fight against organised crime

COUNTERFEIT ICT DEVICES - TECHNICAL SOLUTIONS

Control Measures	Control Efficiency
Type Approval	 Conformity with pre-market requirements In-country lab testing Post-market surveillance → Porous and unapproved routes continue to exist
Verification of Conformity	Control in the export/production country, including inspection, lab testing and product certification → Limited efficiency against smuggling
Mobile Device Management (MDM)	Only approved devices (IMEI) are authorized to access the mobile network → Efficient in blocking fraudulent devices

MDM CHARACTERISTICS

EFFICIENT PROGRAM BUT COMPLEX TO IMPLEMENT AND SUSTAIN

> Complex Environment

- ✓ Many stakeholders (Regulator, Customs, Bureau of Standards, Buyers, Seller, Manufacturer, MNOs ...)
- ✓ **Direct impact** on mobile subscribers (non compliant IMEI)
- ✓ Need to guaranty privacy and confidentiality of communications content

> System Sustainability

- √ User experience
- √ High Availability 24x7
- ✓ Scaling up to cover other facets such as security agencies requirements.
- ✓ Adaptability to evolving conditions

> Investment requirements

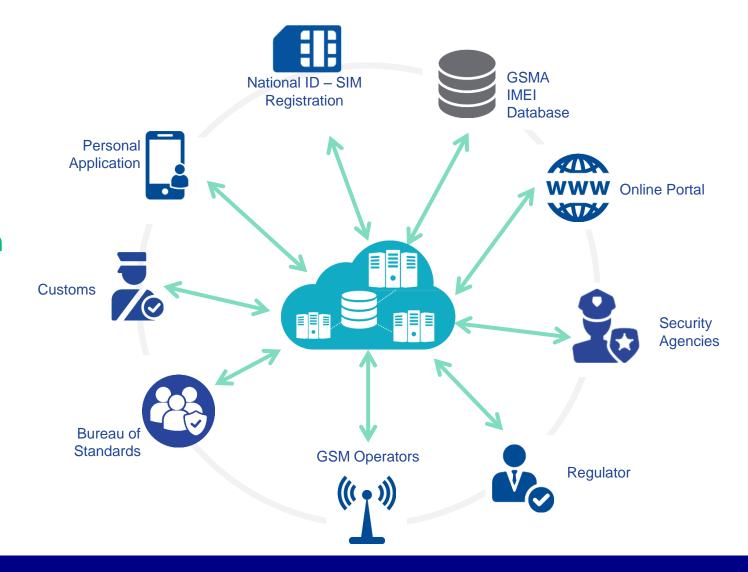

- √ Advanced technology solutions
- ✓ Automated processes and systems integration
- ✓ Training and know-how transfer
- ✓ Change management
- ✓ Communication & Public awareness

MDM Solution Overview

Comprehensive Solution

Based on a Centralized System

and managed from a National Command Center

MDM SOLUTIONS – SOURCING APPROACHES

TWO MAIN APPROACHES

> Outright Procurement Approach

The Regulator

- ✓ selects the technical solution(s) supplier(s) and/or integrator
- ✓ ensures the project and stakeholder management and systems integration.
- ✓ pays directly all the suppliers upon a delivery based approach
- ✓ assigns resources for the administration of the solution

> Public Private Partnership (PPP) Approach

The Regulator delegates the implementation and administration of the solution to a private partner (Administrator), who

- ✓ plays the role of a trusted and neutral integrator
- ✓ invests in the implementation of a turn-key solution including 3rd party suppliers
- √ is remunerated through a fee (different modalities are possible)
- ✓ when appropriate, transfers the solution at the end of the contract to the regulator or any other selected body

PPP - SPLIT OF RESPONSIBILITIES

Defines objectives & priorities

Defines the regulatory framework

Take operational decisions

Monitor Performance through KPI

Ensure regulatory enforcement, incl. buy-in from other stakeholders

ADMINISTRATOR

Finance the program

Design, implement and integrate the solution

Technical operational support

Maintenance of equipment and systems

Training and capacity building

PPP Approach Advantages

WIN-WIN SITUATION

> Timely implementation of the project

✓ PPP projects are more commonly completed on schedule and budget

> Better Allocation of Risk

- ✓ All parties do what they are good at. The Regulator and the Administrator involved together ensure the best possible allocation of tasks and risk.
- ✓ The Administrator takes all the financial risk

> Self Sustainable Projects

✓ The project generates revenues that ensures its sustainability

> Better allocation of the Regulator's resources

✓ The Regulator allocates its budget to other activities and let other beneficiaries pay the service fee

COTECNA - EXPERIENCE IN DELIVERING PPP PROJECTS

TAILOR MADE SOLUTIONS AND TECHNICAL ASSISTANCE SERVICES

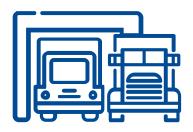

COTECNA GOVERNMENT & TRADE SOLUTIONS

TECHNOLOGY BASED SOLUTIONS DELIVERED THROUGH PPP PROJECTS

Non-Intrusive Inspection

Customs Inspection Supervision Center

Container Security

Verification of Conformity

National Valuation Database & Risk Management

Single Window System

Transit Monitoring

Mobile Device Management
