DEVELOPMENT TREND IN CHINA MARKET FOR VEHICULAR MULTIMEDIA DOMAIN

Xiaofeng Yi

Sector Member : TIAA

2020,Dec,10th

Xiaofeng Yi (易晓峰) (Kimberly)

- Co-Founder of the IOV department of AutoHome

- Domestic secretary General of China counterpart to FGVM (Focus Group of Vehicular Multimedia) of Study Group-16 of ITU-T

- "Invited Researcher" of think tank of "Chinese Vehicular Internet Industry Alliance

Email-address:

xiaofengyieki@gmail.com

OUTLINE

- *Impacts on vehicular Entertainment brought by Internet Ecological Prosperity*

- *Differences between In-vehicular Scenario and Mobile Scenario*

- *Real Entrance to Mini Programs—Forecast on future High-Frequency Demands*

- *From "users' seeking for services" to "services' coming for users"*

- *Technical basement for unified multiple-end-user-experience*

- *Future Trend on In-vehicular Services Business Model*

- *Available but Invisible Data-Merging*

IMPACTS ON VEHICULAR ENTERTAINMENT

*BROUGHT BY INTERNET ECOLOGICAL PROSPERITY*

- Wechat
- Tiktok
- Xiaohongshu

- Baidu Map
- AutoNavi Map

- QQ Music
- Ximalaya FM

Total Amount of Data Traffic Per Month for one OEM Brand in 2019 (M)	APP	Category	Data Traffic	Specific Data Traffic Per Month（M）	P.S.
2700	酷我音乐	Music & FM	30.00%	810	About 850 Minutes
2700	百度地图	Map	12.00%	324	About 320 Minutes
2700	考拉FM	Music & FM	9.00%	243	
2700	爱奇艺	Movie & Video	9.00%	243	
2700	抖音	Social Media	8.00%	216	
2700	应用市场	App Store	7.00%	189	
2700	绝地求生	Game	7.00%	189	About 2 games' time
2700	高德地图	Map	6.00%	162	
2700	腾讯视频	Movie & Video	5.00%	135	
2700	微信	Social Media	3.00%	81	
2700	其他	Others	4.00%	108	

Alibaba Group
- T-Mall
- TAOBAO

- DingDing

- MaoYan Film Tickets

- Youku

INTERESTING CHANGES

- Oligopoly Effect: BAT
- Fragmentation of time
- Top 2:Music and Navigation
- Average Online music time: 850 minutes/per month *(offline part not included)*
- Average Online Navigation time: 320 minutes/per month*(offline part not included)*
- Social Media moves from mobile phone to vehicular multimedia-domain
- Benefits from Unified-ID within one Group：Intelligent reminder across mobile-IVI system

  Example--Alibaba's movie ticket purchase APP
- Passenger Feeling—Game, Movie, Mobile Officing

  New Demands will explode after Autonomous Driving realized

DIFFERENCES

BETWEEN VEHICULAR SCENARIO & MOBILE SCENARIO

Vehicular Scenario

- Time Length：short

- Priority : Safety

- Different Function: Notification

- HMI : Voice Control + Steering Control

- Fragment : Low frequency for each demand

- Passenger Entertainment--Game／Movie／Office

Are these real demands in Car?

How to win mobile screen?

Is it necessary to win mobile screen?

Bigger Screen + Better Acoustic Enjoy

Private Space

REAL ENTRANCE TO MINI PROGRAMS

FORECAST ON FUTURE HIGH-FREQUENCY DEMANDS

OS : Android Based OS **PK** Self-developed OS with Linux Kernal-(Tesla/Ali OS/vw.OS)

Vehicular App Store **VS** Mini Programs

Apps (under Android Based Vehicular OS) → **Mini Programs**
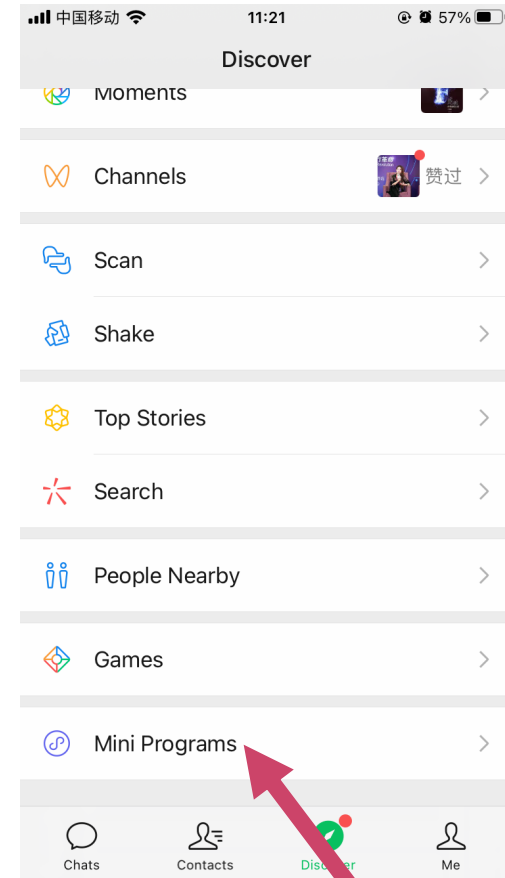

Pros:
1. Based on GMS(Google Mobile Service)
2. Abundant Application Developers

Cons:
1. Without Unified UI
2. Without Unified Notification Push
3. Weaker Vehicular Payment Capability(compared with Mobile)
4. DAU Amount-User Traffic Distribution
5. Without Unified service API (example: steering control)

Pros:
1. Lower Adaption Cost
2. Fast Implementation from Mobile App
3. Relatively uniform container-developer-friendly
   easily be implanted cross different OS
4 . Slight-----
   Convenient for low-frequency services
   Easy to realize "services' coming to users
5. Better for cloud-fusion to unify multiple-end-user-experience

HOWEVER, MINI PROGRAMS MUST RELY ON HUGER PLATFORM , OR SO CALLED "ENTRANCE"
--HIGH FREQUENCY DEMANDS

- Baidu:Map based Mini Programs ?

- Tencent: Wechat based Mini Programs ?

- Alibaba: Payment based Mini Programs ?

High Frequency Demands in Car
- Control   => tool feature
- Navigation   => tool feature
- Entertainment   => limited HMI in Car

Q :How to build a services-pushing-engine?

A :To define scenarios using fusion-data

## FROM "USERS'SEEKING FOR SERVICES" TO "SERVICES'COMING FOR USERS"

Car Status Data
—collected by OEM

User Preference Data
— Collected by Application Developer

External Environment Data
— Collected by 3rd party Internet company/Government

方法：

目的：

Tier1合作车机和TSP云本地开发集成

场景库
用户全生命周期的场景
一云多端

云端：场景、服务之间匹配关系

服务库竞争力提升
+优化设计

2C：科技体验+车载支付闭环

云：接口打通数据采集

端：本地嵌入式开发

联调适配

数据源

场景工程定义
=场景触发条件

V1.0:产品经理设计推送规则库

研发：匹配算法库

用户画像标签库
（标签设计+数据沉淀）

用户账号体系
跨公司打通

活动平台折扣实时打通
用户历史品牌偏好打通
消费能力打通
常活动地理范围数据打通
社交关系数据库打通
文章/论坛浏览记录打通

服务内容组合创新

流程优化设计

价格

门店网络

SKU爆品套餐

服务内容1

服务内容2

服务流程2C竞争力优化

价格2C竞争力优化

线下服务竞争力：
1）门店网络覆盖率；
2）服务品质；
3）保真防骗

SKU爆品遴选：
1）高频；
2）利润高；
3）不涉及安全纠纷；

生态入口：语音交互/多模交互
1）人脸识别
2）指纹识别
+声纹识别

生态出口：车载支付

打通车载硬件
先服务后付款

交互体验优化

消费金融

2OEM：
车主全生命周期运营+功能反馈

积分打通权益兑换

功能喜好/故障反馈

二手车/同品牌置换

论坛口碑/点评/投诉反馈

AH车主卡+X权益
package
包装成OEM车主卡

车友圈发起活动
社群营销
社交裂变传播

OEM集成测试
+云端打通

云端接口打通

账号体系打通

台架/道路测试

长期：千人千面AI PUSH

服务组合创新

流程优化

价格动态运营

提升覆盖率：导流收入分成：诚信保真；

推出10"SKU+服务"套餐爆品,线上支付做收入

2b：有效导流统计+私域流量

按需触发

车载支付记录/专属渠道码/专属产品/交互轨迹+导航轨迹

扩大用户触点
漏斗监测
精准投放
储值圈客
赠券埋钩

客户建档+画像沉淀+精准服务推荐+临近社区团购

TECHNICAL BASEMENT FOR UNIFIED MULTIPLE-END-USER-EXPERIENCE

- Unified ID System across different Firms (Mutual-trusted and bundled Account)

- Available Data Fusion (Combined conditions judgement)

- Cloud Based services-recommendation-engine using unified determination logic （Rules-Database）
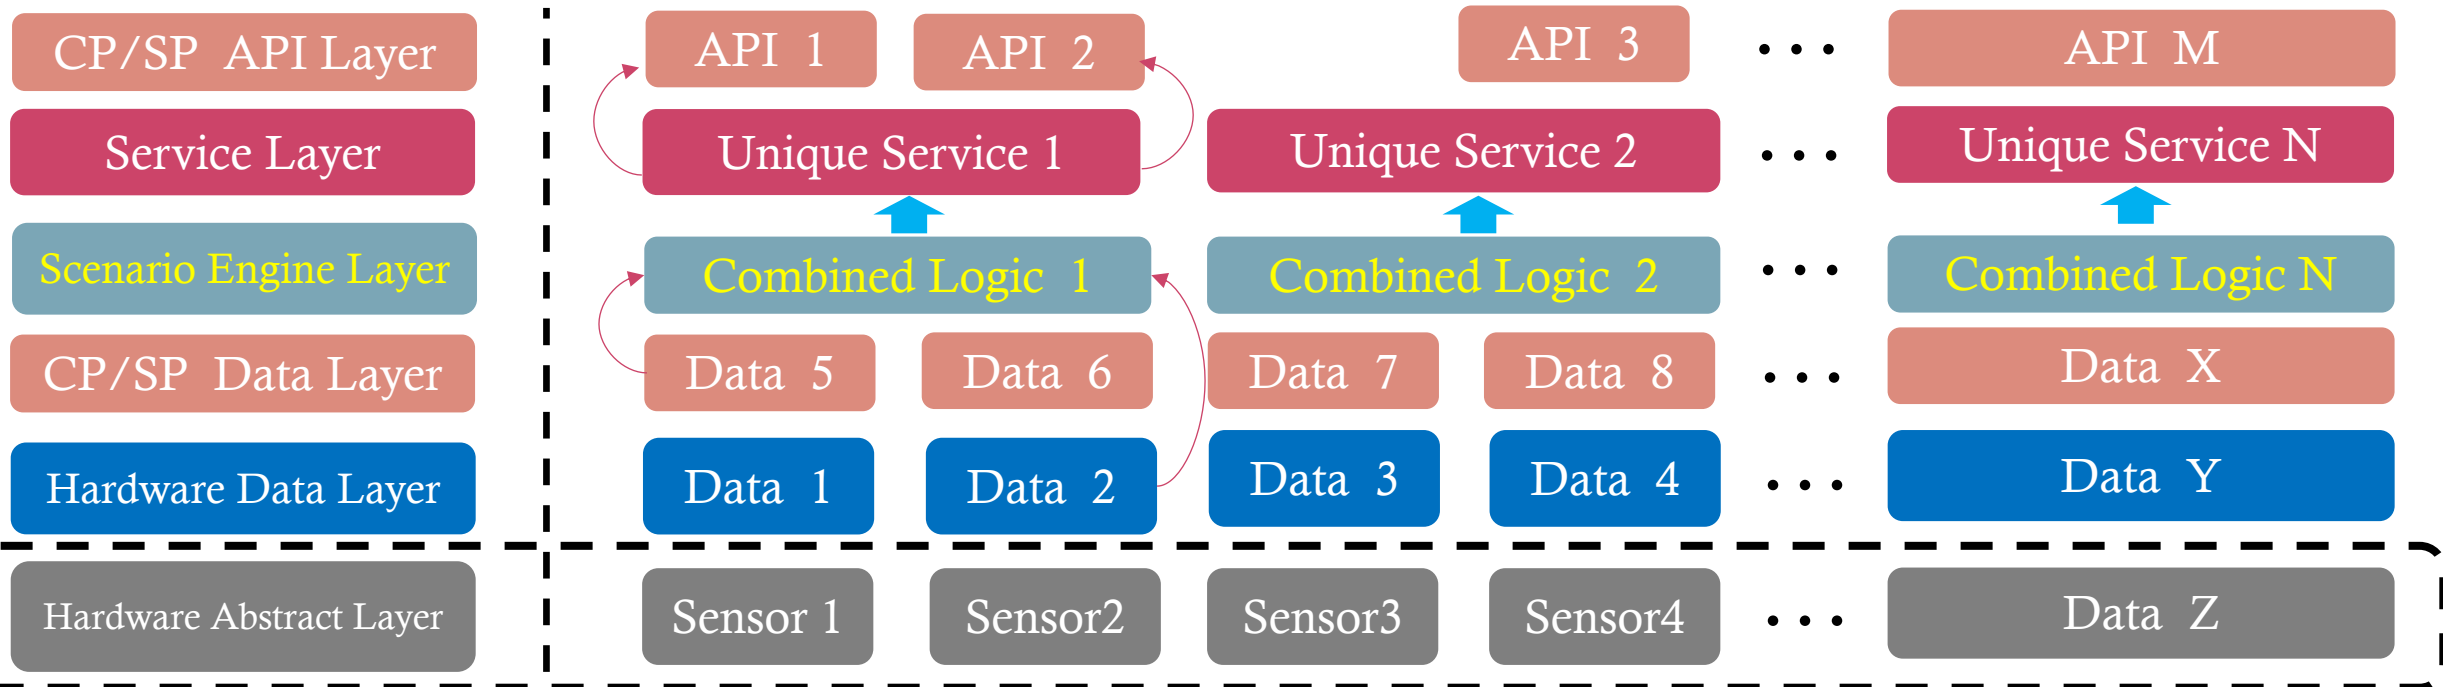

Private Chamberlain
- Undisturbed User Experience

- Breakpoint-Continuation Services

- Personal-preference matched Service Recommendations

FUTURE TREND ON BUSINESS MODEL
OF VEHICULAR SERVICES

- *Another Question: How to build different user experience based on similar Internet Eco-system?*

Scenario-bunded & Unique Services wins

CP/SP API Layer	API 1	API 2	API 3	⋯	API M
Service Layer	Unique Service 1		Unique Service 2	⋯	Unique Service N
Scenario Engine Layer	Combined Logic 1		Combined Logic 2	⋯	Combined Logic N
CP/SP Data Layer	Data 5	Data 6	Data 7	Data 8	⋯	Data X
Hardware Data Layer	Data 1	Data 2	Data 3	Data 4	⋯	Data Y
Hardware Abstract Layer	Sensor 1	Sensor2	Sensor3	Sensor4	⋯	Data Z

Based On Digitalization Level of OEM's Vehicle
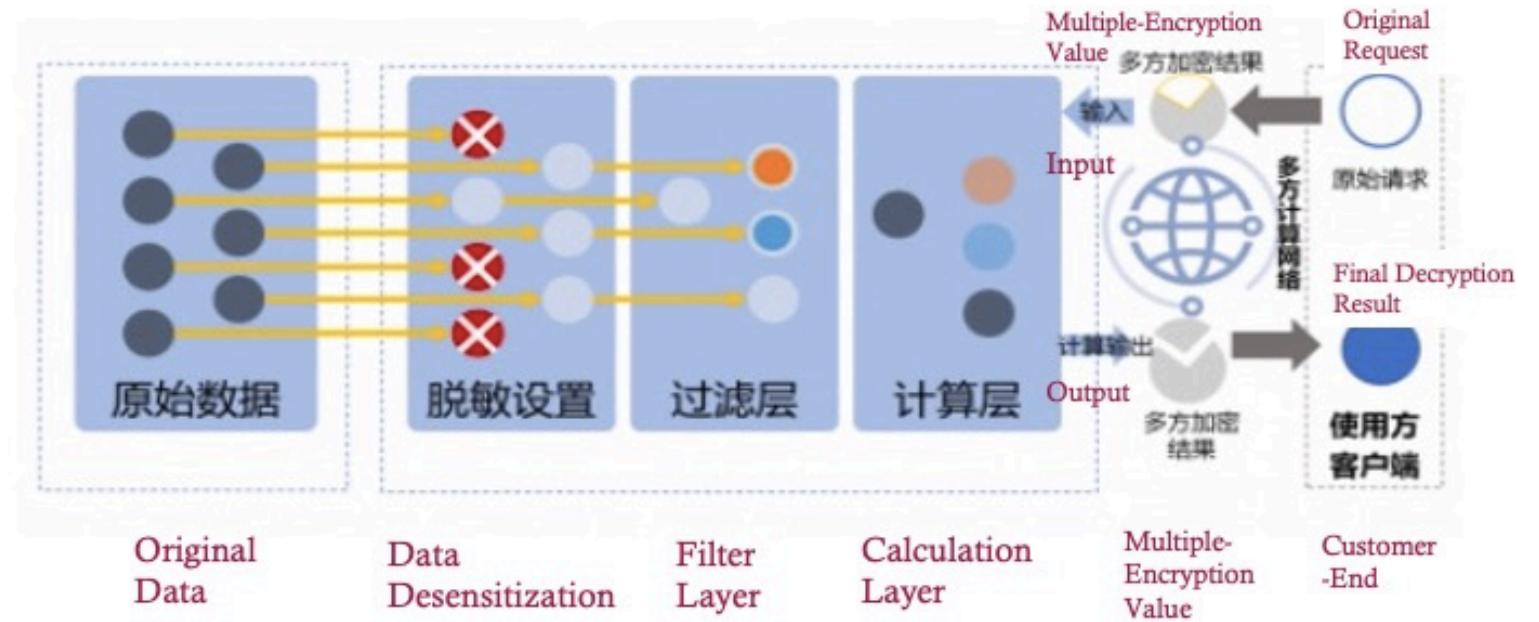

AVAILABLE BUT INVISIBLE DATA-MERGING

When data fusion occurs between two companies, joint venture can solve problem caused by trust crisis;
However ,when data fusion occurs more than 3,4,5 even more companies, what should we do?

Separate Data

Merged Data & Combined Services

Xiaofeng Yi once discussed data-fusion way based on block-chain in 2018's Forum in China

https://www.xincheping.com/news/121215.html

原始数据 — Original Data
脱敏设置 — Data Desensitization
过滤层 — Filter Layer
计算层 — Calculation Layer
Multiple-Encryption Value
Customer-End

Input 输入
Output 计算输出

Multiple-Encryption Value 多方加密结果
Original Request 原始请求
多方计算网络
Final Decryption Result
使用方 客户端
多方加密结果

THANK YOU
