

# Decoding the Ecosystem of Agriculture for the Next Green Revolution: Opportunities and Challenges

By

Dr. Ashwini Gajarushi,  
Engineering Manager (Electronics)  
TIH Foundation for IoT & IoE,  
Mumbai, India

**ITU/FAO Workshop on “Cultivating Tomorrow: Advancing Digital Agriculture through IoT and AI,  
Date: 18/3/24**

# Contents

**Digital  
Agriculture**

**Opportunities**

**Success of  
Digital  
Agriculture**

**Challenges**

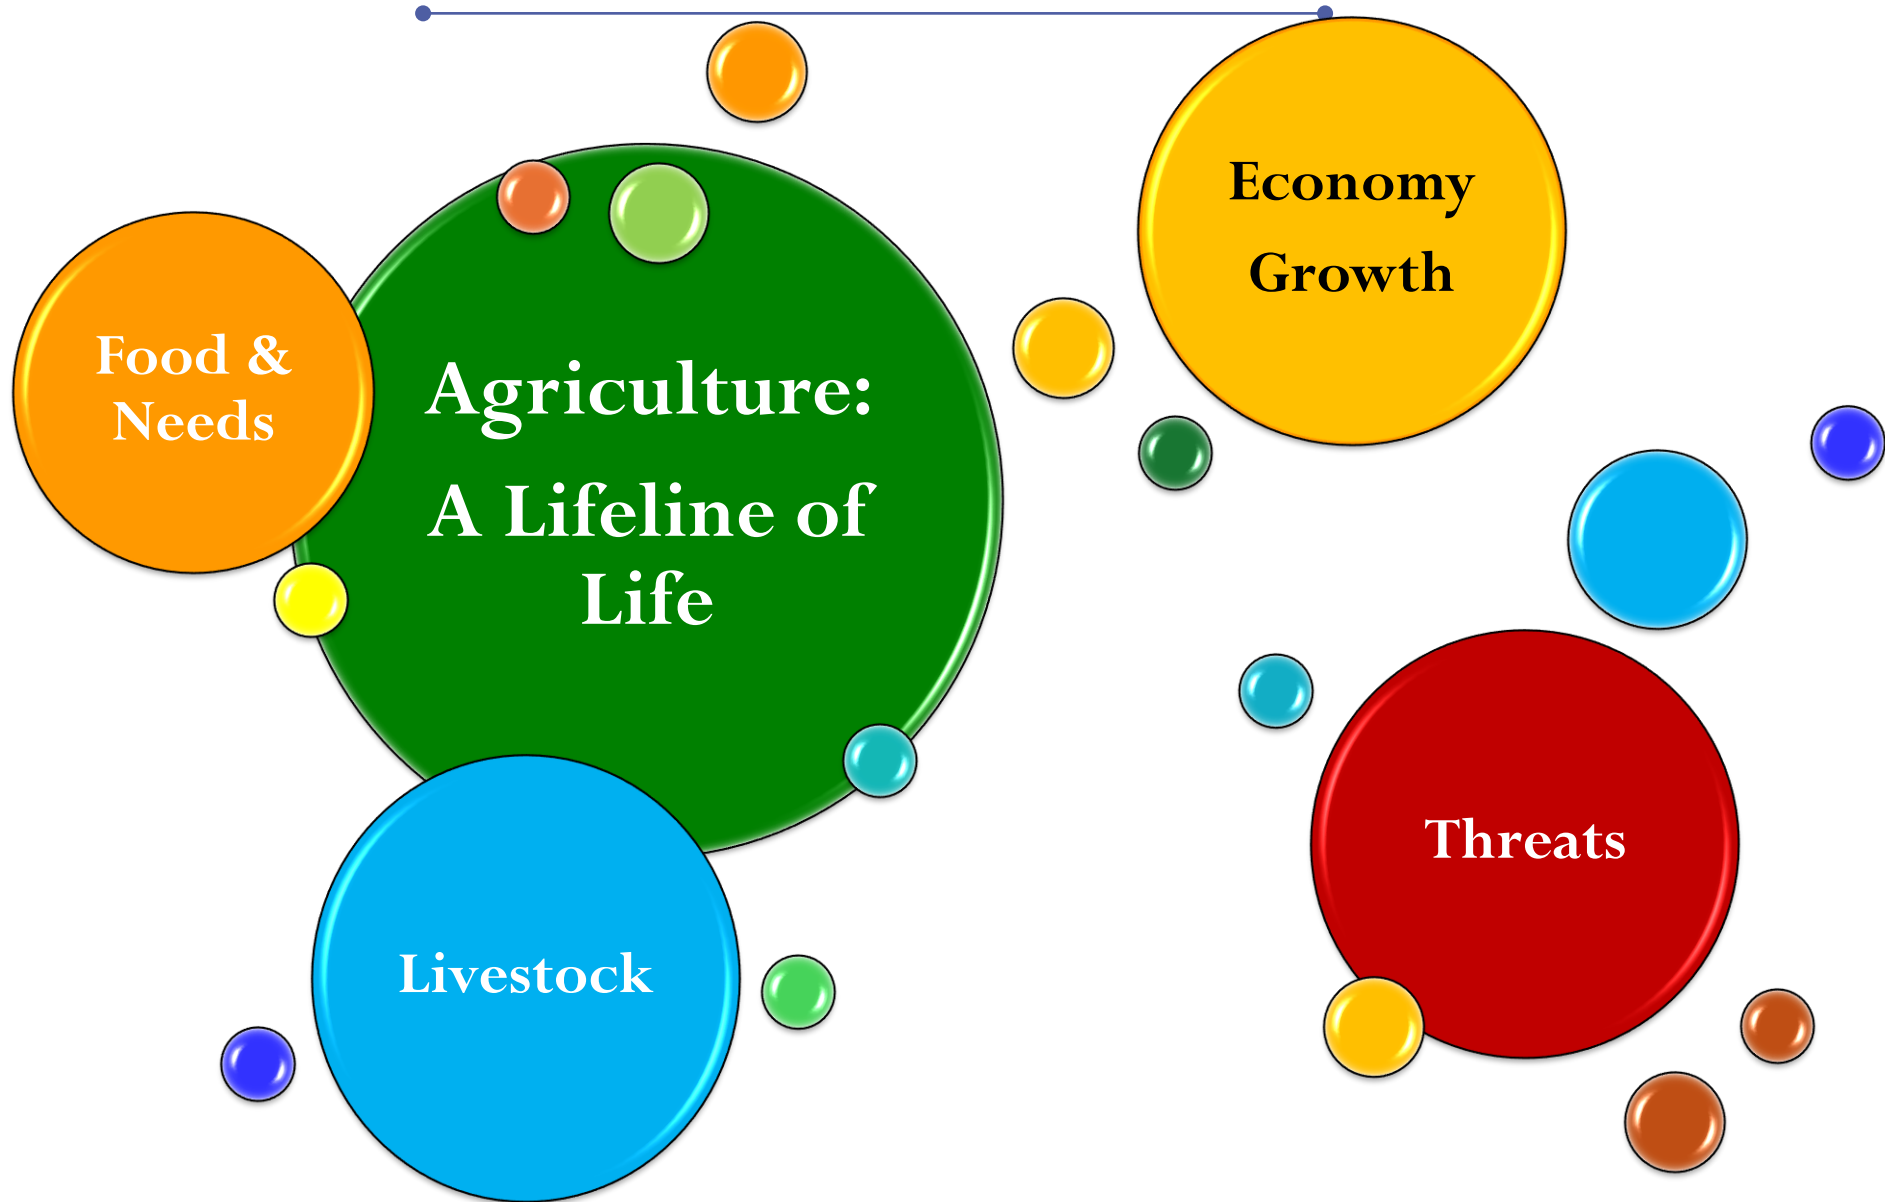

**Digital Agro  
Field: TIH-IoT**

# Agriculture: A Lifeline of Life!!!

# Digital Agriculture for Sustainability

Livestock & Aqua-farming

Decision support  
AI/ML

Drones & Robots

Agri-Storage

IoT & Sensors

Precision Farming

# Why IoT and AI/ML for Smart Agriculture?

**Economy  
Growth**

**Food  
Sustainability**

**Increased  
Productivity**

**Decreased  
Environmental  
Impact**

**Cost  
Saving**

**Predictive  
Maintenance**

**IoT for  
Precision  
farming &  
Resource  
Optimization**

# Success Lies in Customer's Satisfaction

**Adaptable**

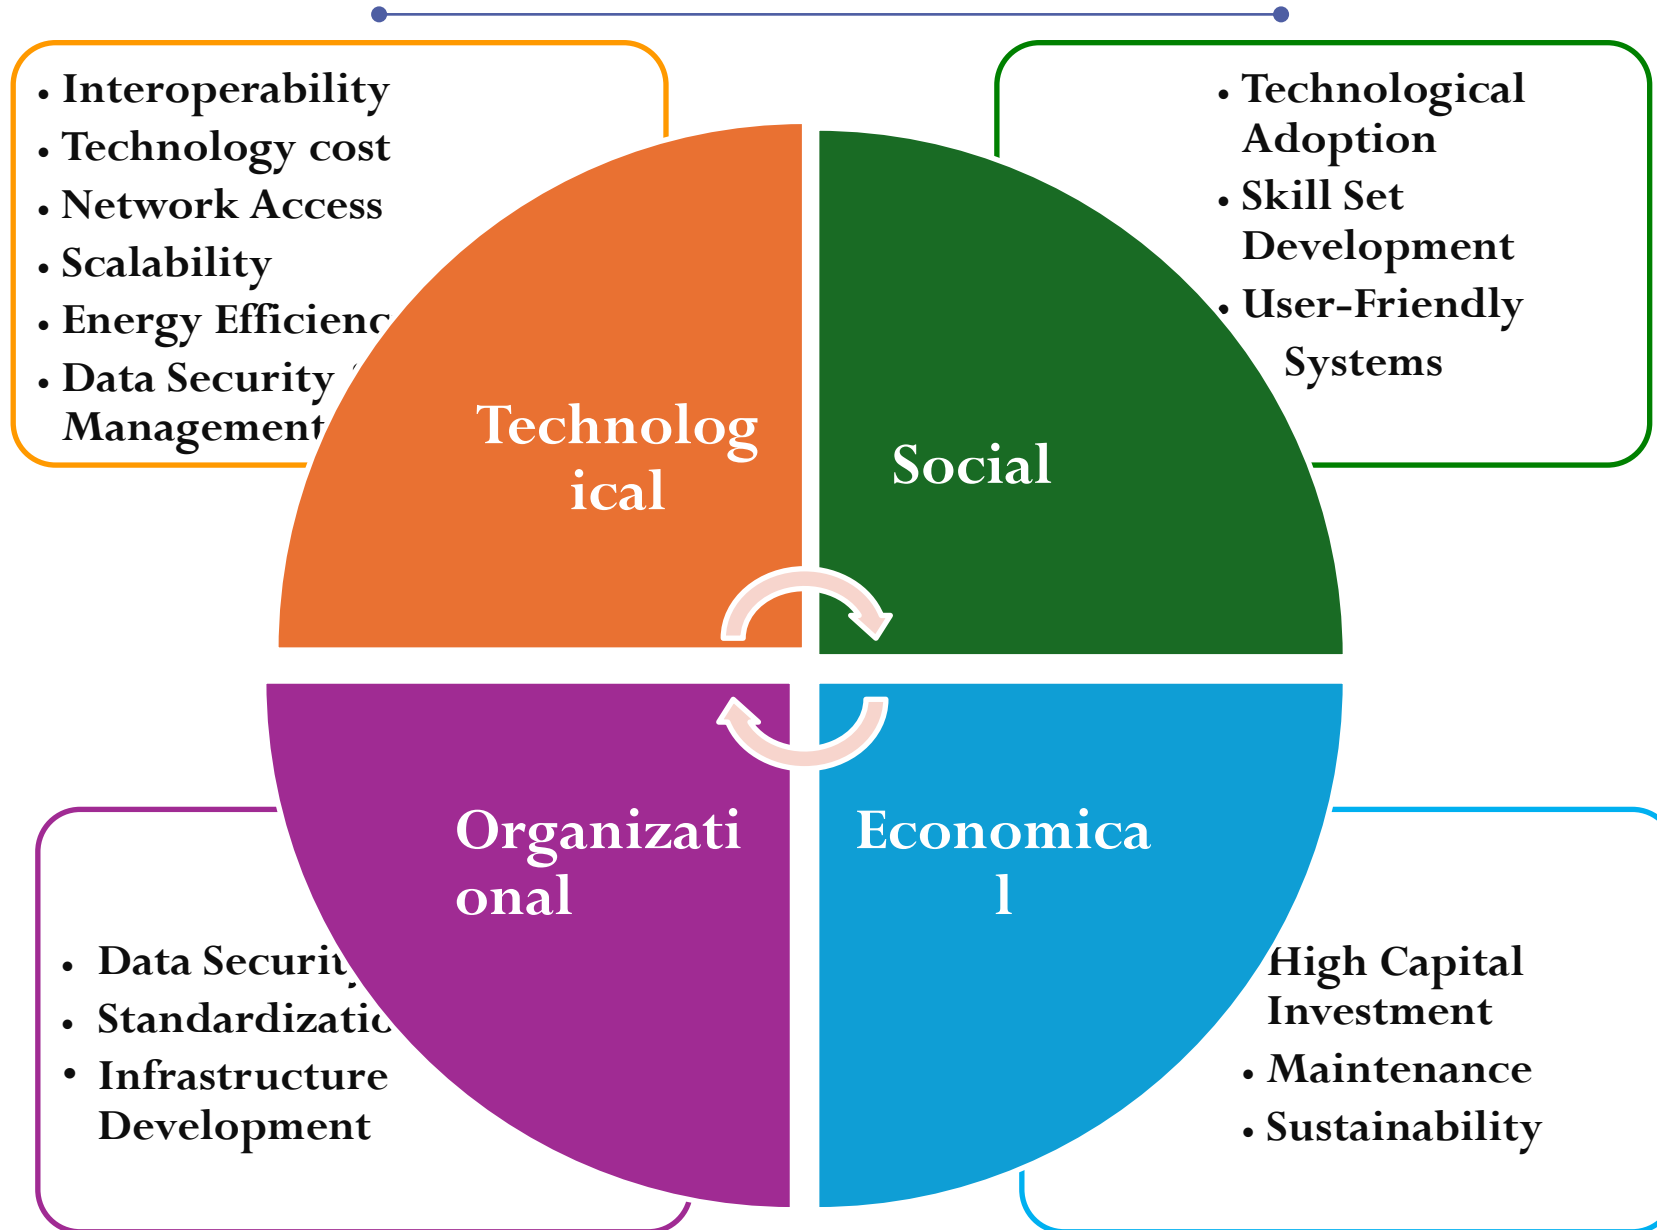

**Accessible**

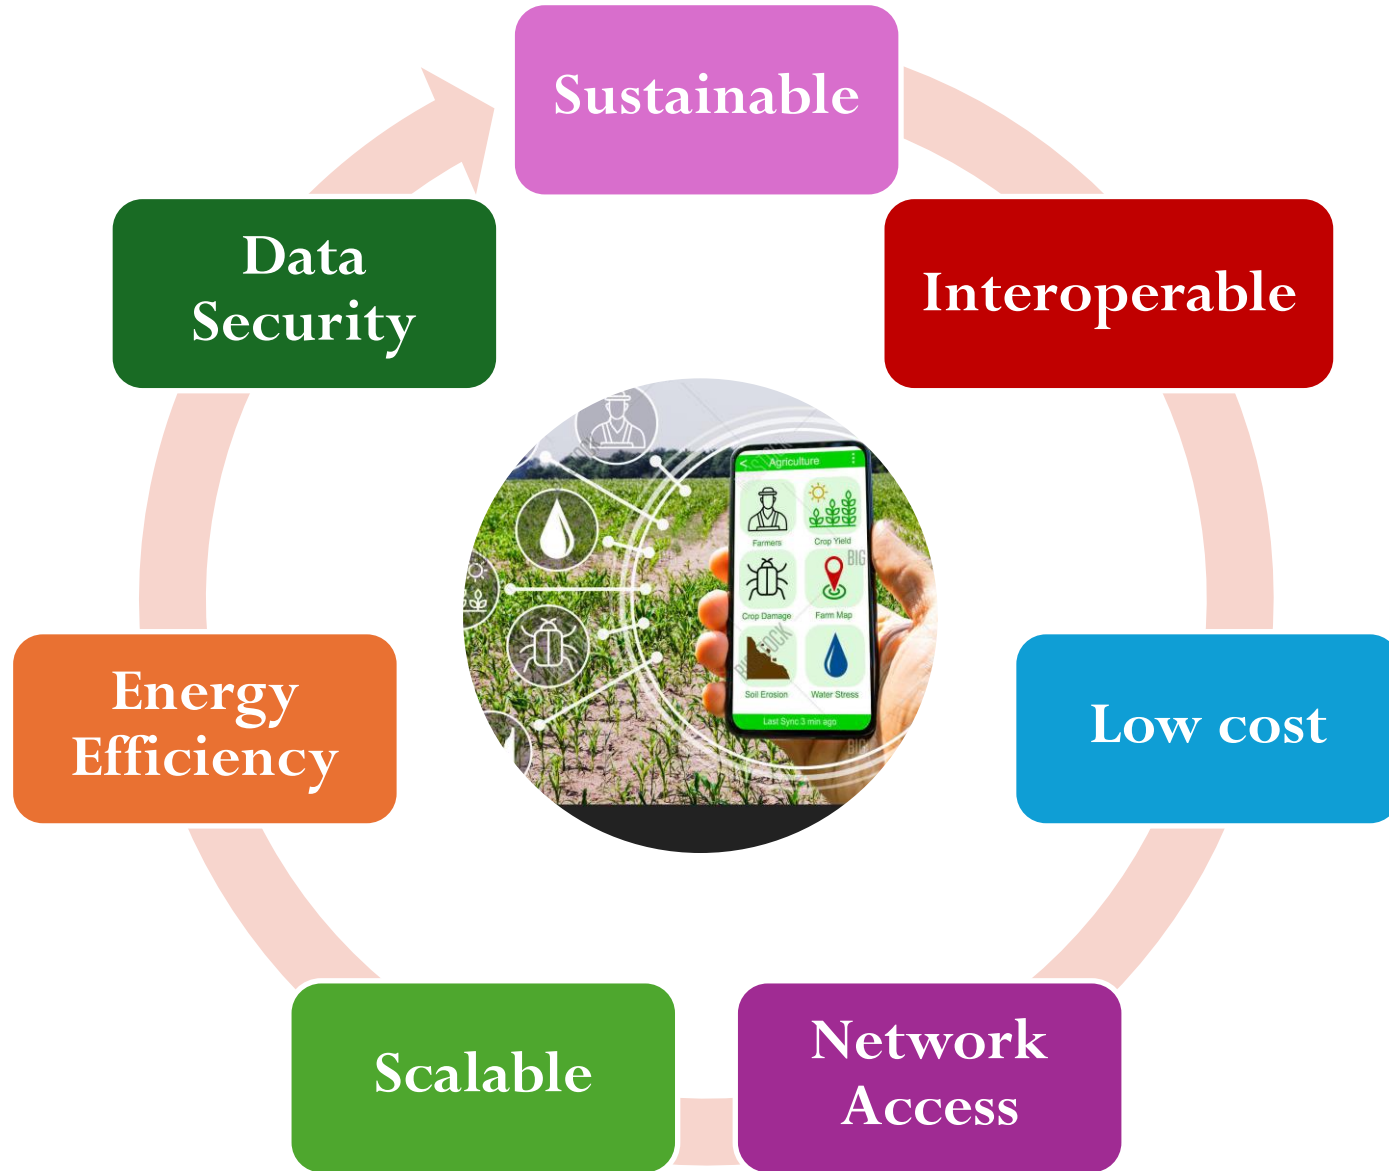

# Challenges in the Adaption of IoT for Agriculture

# Sustainable Technology for Sustainable Agriculture

# An ecosystem of IoT & AI/ML

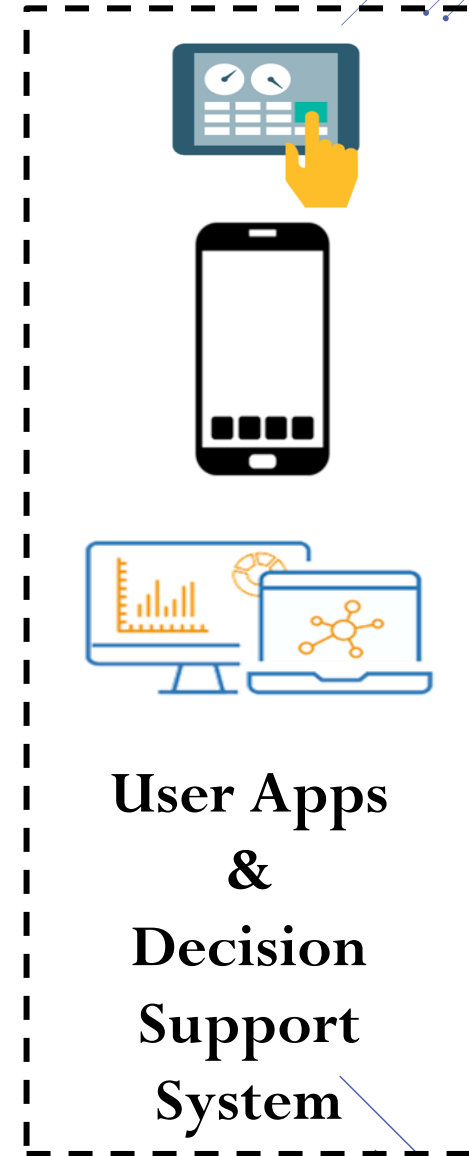

Things

Communication  
Network

Cloud  
Data storage  
Data  
Analytics

User Apps  
&  
Decision  
Support  
System

# Sustainable Technology: Technology Advancements...

**Secure Digital Payment**

**Advancements in Communication**

**AI/ML Progress**

**Industry 4.0**

# Design Requirements of Things

**Miniaturized**

**Efficient**

**Energy efficient**

**Battery-less**

**Accurate**

**Reliable**

**Cost-effective**

**Self-identification**

**Self-testing**

**Self-diagnosis**

**Self-troubleshooting**

# Advanced Design Solutions for CPS

**System-on-Chip**

**Advanced processor Efficient**

**Energy efficient devices**

**Battery-less**

**Calibration**

**Certified Reliability**

**Digital sensors/ SoC Cost-effective**

**MAC identification**

**Processor & Self-testing Hardware**

**Hardware Safety**

**Self-diagnosis**

**Functional Safety**

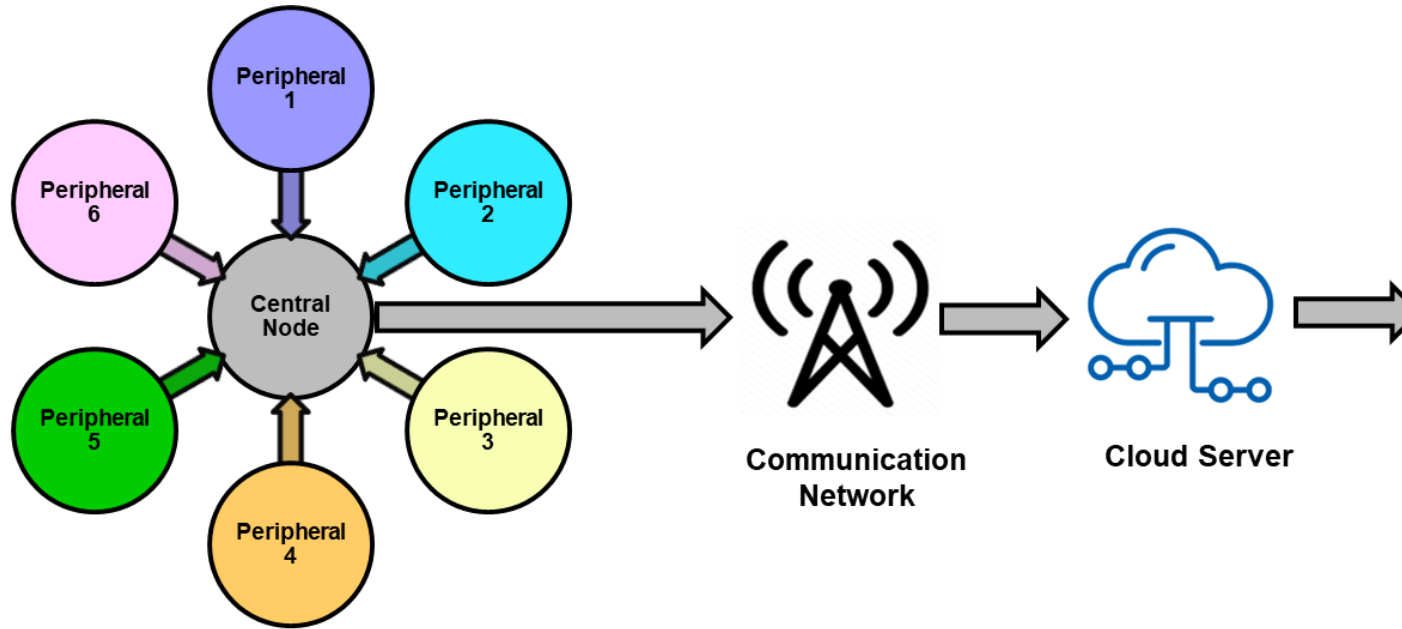

**NABL Self-troubleshooting Certified**

# SAgriS –Smart Agri Storage Monitoring System

SAgriS Device

- Communication efficiency
- Energy-efficient
- Ease of operation: Handy, modular, robust
- Low-cost

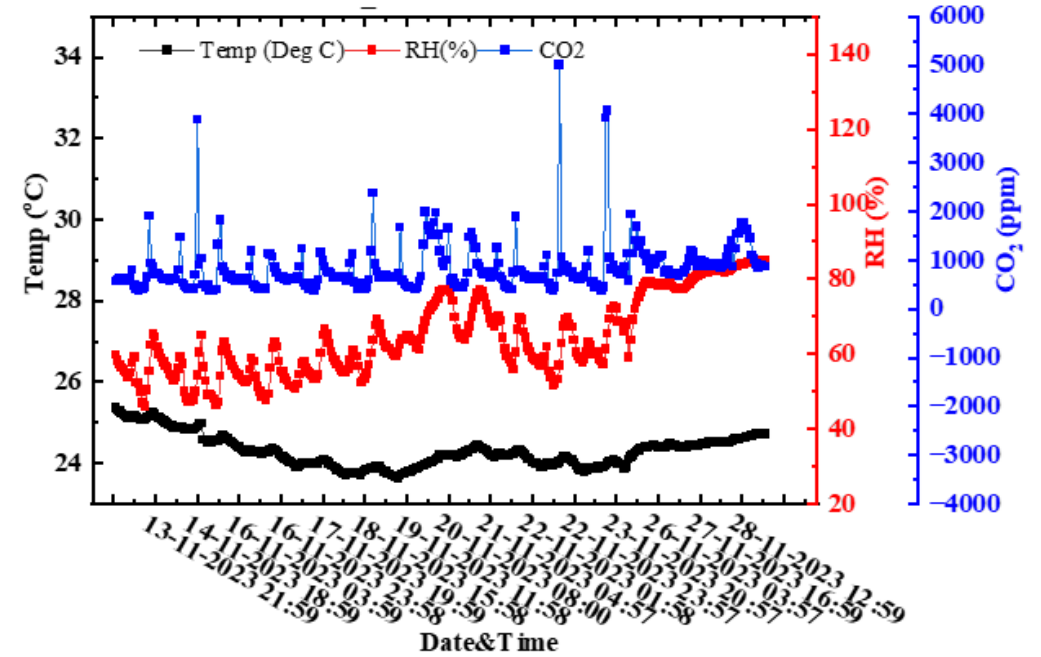

# SAgriS –Deployment at Abhona, Nasik

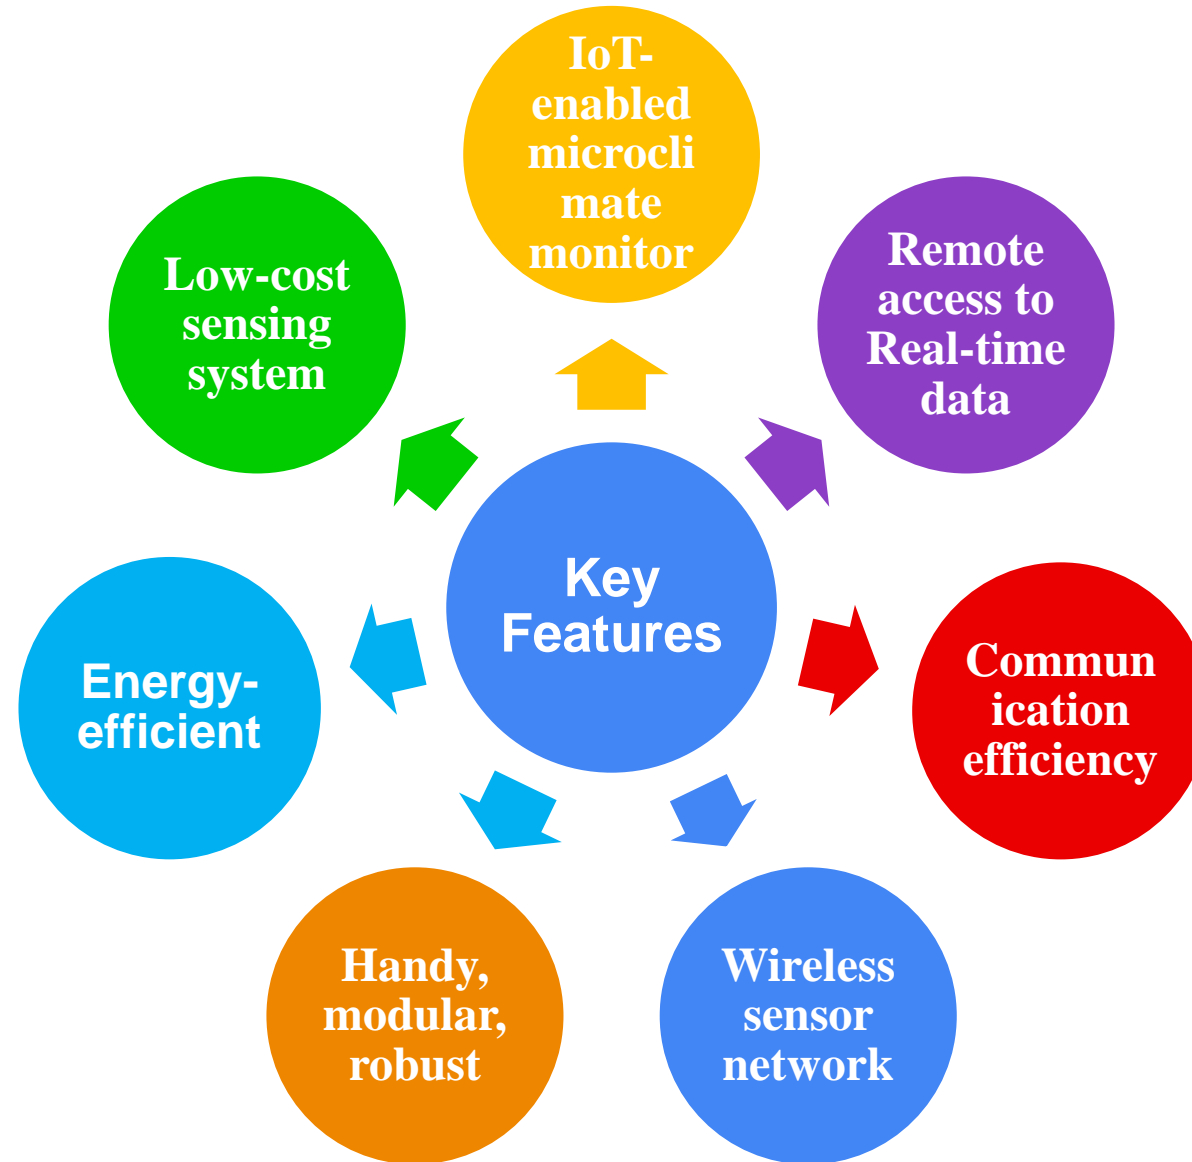

SAgriS Device

# SAgriS –An Efficient IoT System

# Challenges Ahead

## Sensor

### Accuracy

- Soil-specific sensor calibration
- Repeatability across the sensors

## Variability

### Agriculture Practices

- Crop, Soil, Climate
- Diverse geography
- Development of wide algorithms

## Big Data

### Management

- Crop-specific/ Soil-specific calibration algorithm
- Crop & Geography-specific models
- Storage & Mapping of Advisories for Diverse farming practices

# Digital Agro Field – TIH IoT

Drones for imaging applications for crop health monitoring

Drones for spraying applications

Aerial Robots

15%-20% reduction in fertilizer  
40%-50% reduction in pesticides  
40%-50% reduction in irrigation

Agristation for weather, crop and soil monitoring

SAMBHA V

SOHAM

10%-20% reduction in wastage of crop

Smart storage

SAGriS

50%-70% reduction in harvesting cost

Mechanization and Automation

5%-10% increase price due improved yield quality

Data Analytics for mobile app

iSARATHI

# SAMBHAV – Soil, Weather and Crop Parameters

**SAMBHAV:** An IoT-based Energy Autonomous Smart AgriStation that offers comprehensive monitoring of the entire farm ecosystem

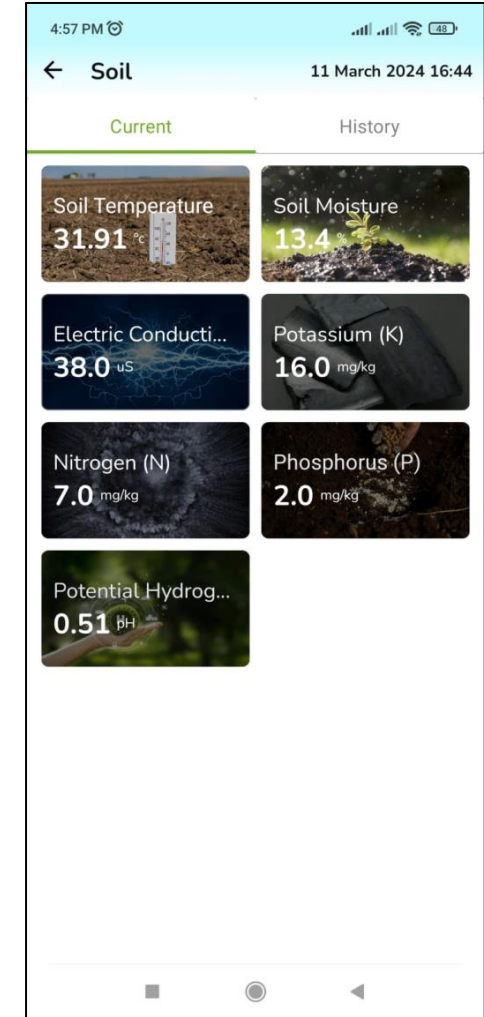

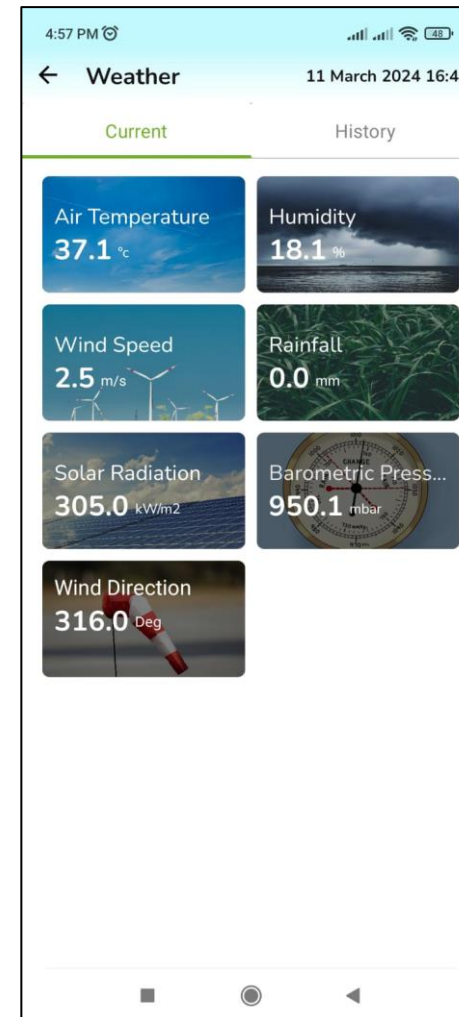

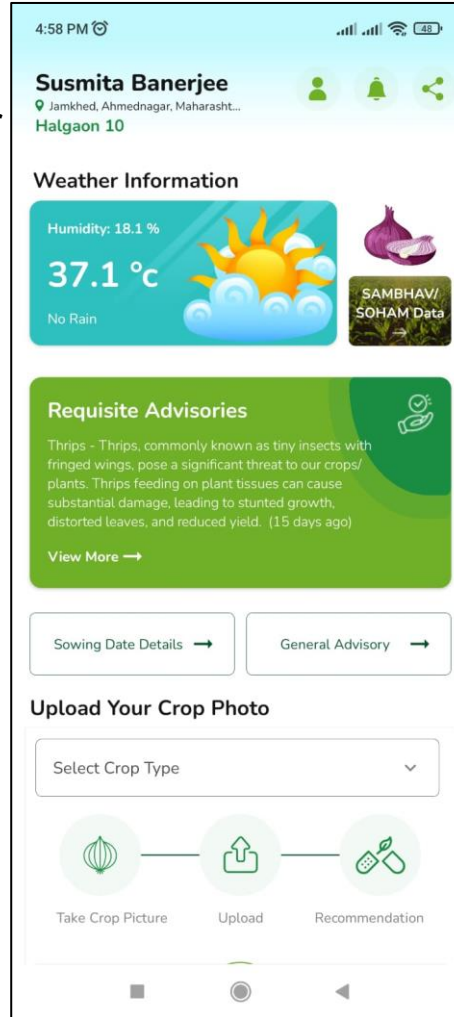

Weather Sensor

Solar Panel

Data Logger

Leaf Sensor

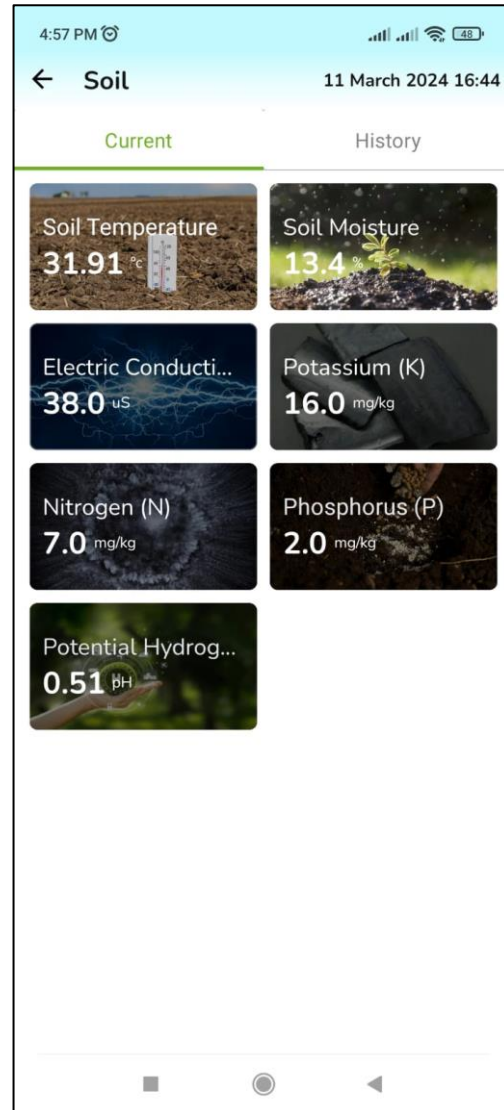

Soil Sensor

# SOHAM – Soil and Crop Parameters

**SOHAM:** A LoRaWAN based smart AgriStation for monitoring crop and soil health

SAMBHAV

SOHAM

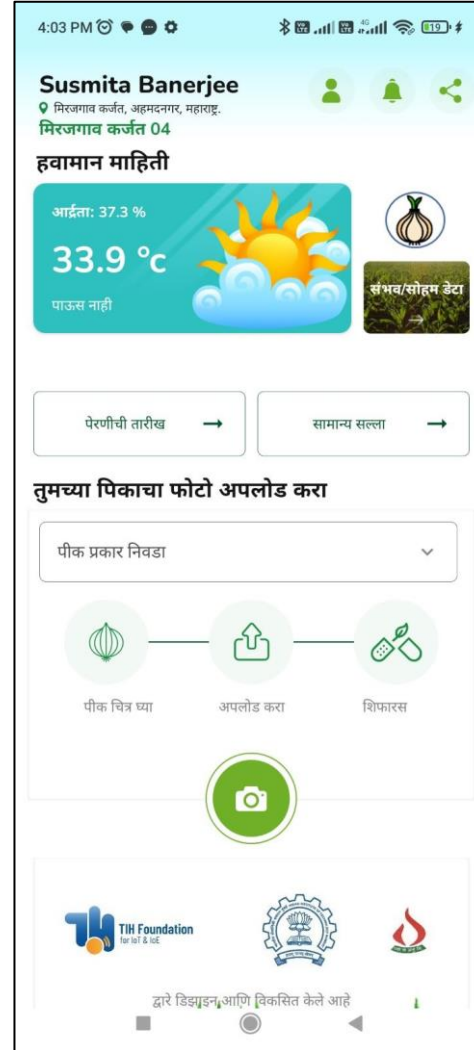

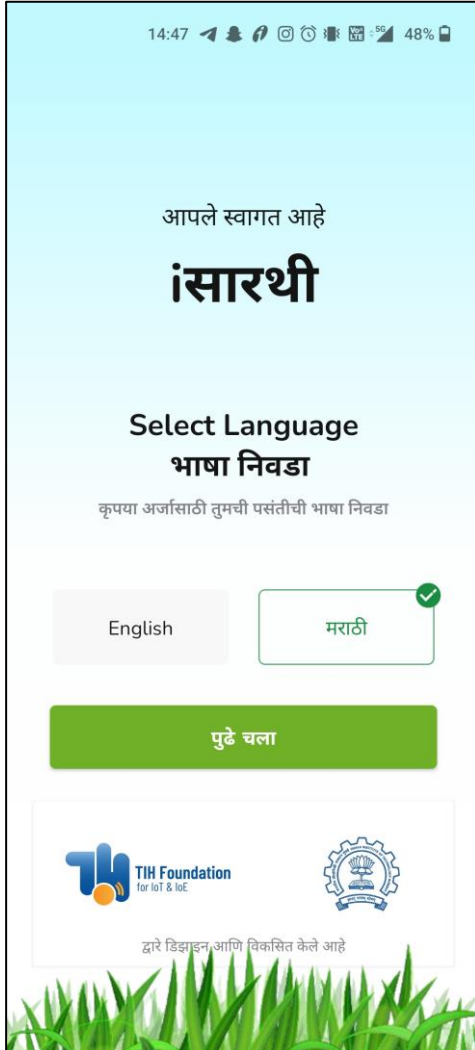

**Deployment Plan**

# iSARATHI Mobile App – Decision Support System

**iSARATHI App:** An Intelligent **Agricultural** System for End-to-End Crop Management

# Field Deployment of SAMBHAV and SOHAM

ICAR- DOGR, Pune

Panoli, Ahmednagar

JalgaonSupe, Pune

Demonstrations to the Farmers, Jalgaon

Kaledhon, low rainfall region in Satara

**“...to make lives simpler”**
