6-10 December 2021

**Proposal for a user-centric ran
architecture towards beyond 5G**

Kosuke Yamazaki
KDDI Research, Inc.

**Session 1: Enabling future wireless
communication systems**

**Paper S1.1: Proposal for a user-centric ran
architecture towards beyond 5G**

Introduction

Beyond 5G/6G realizes cyber-physical systems (CPS) through the bi-directional transfer of vast amounts of data.

“Beyond 5G/6G White Paper ver.2.0”
 KDDI Corporation, KDDI Research, Inc.

GAP Analysis

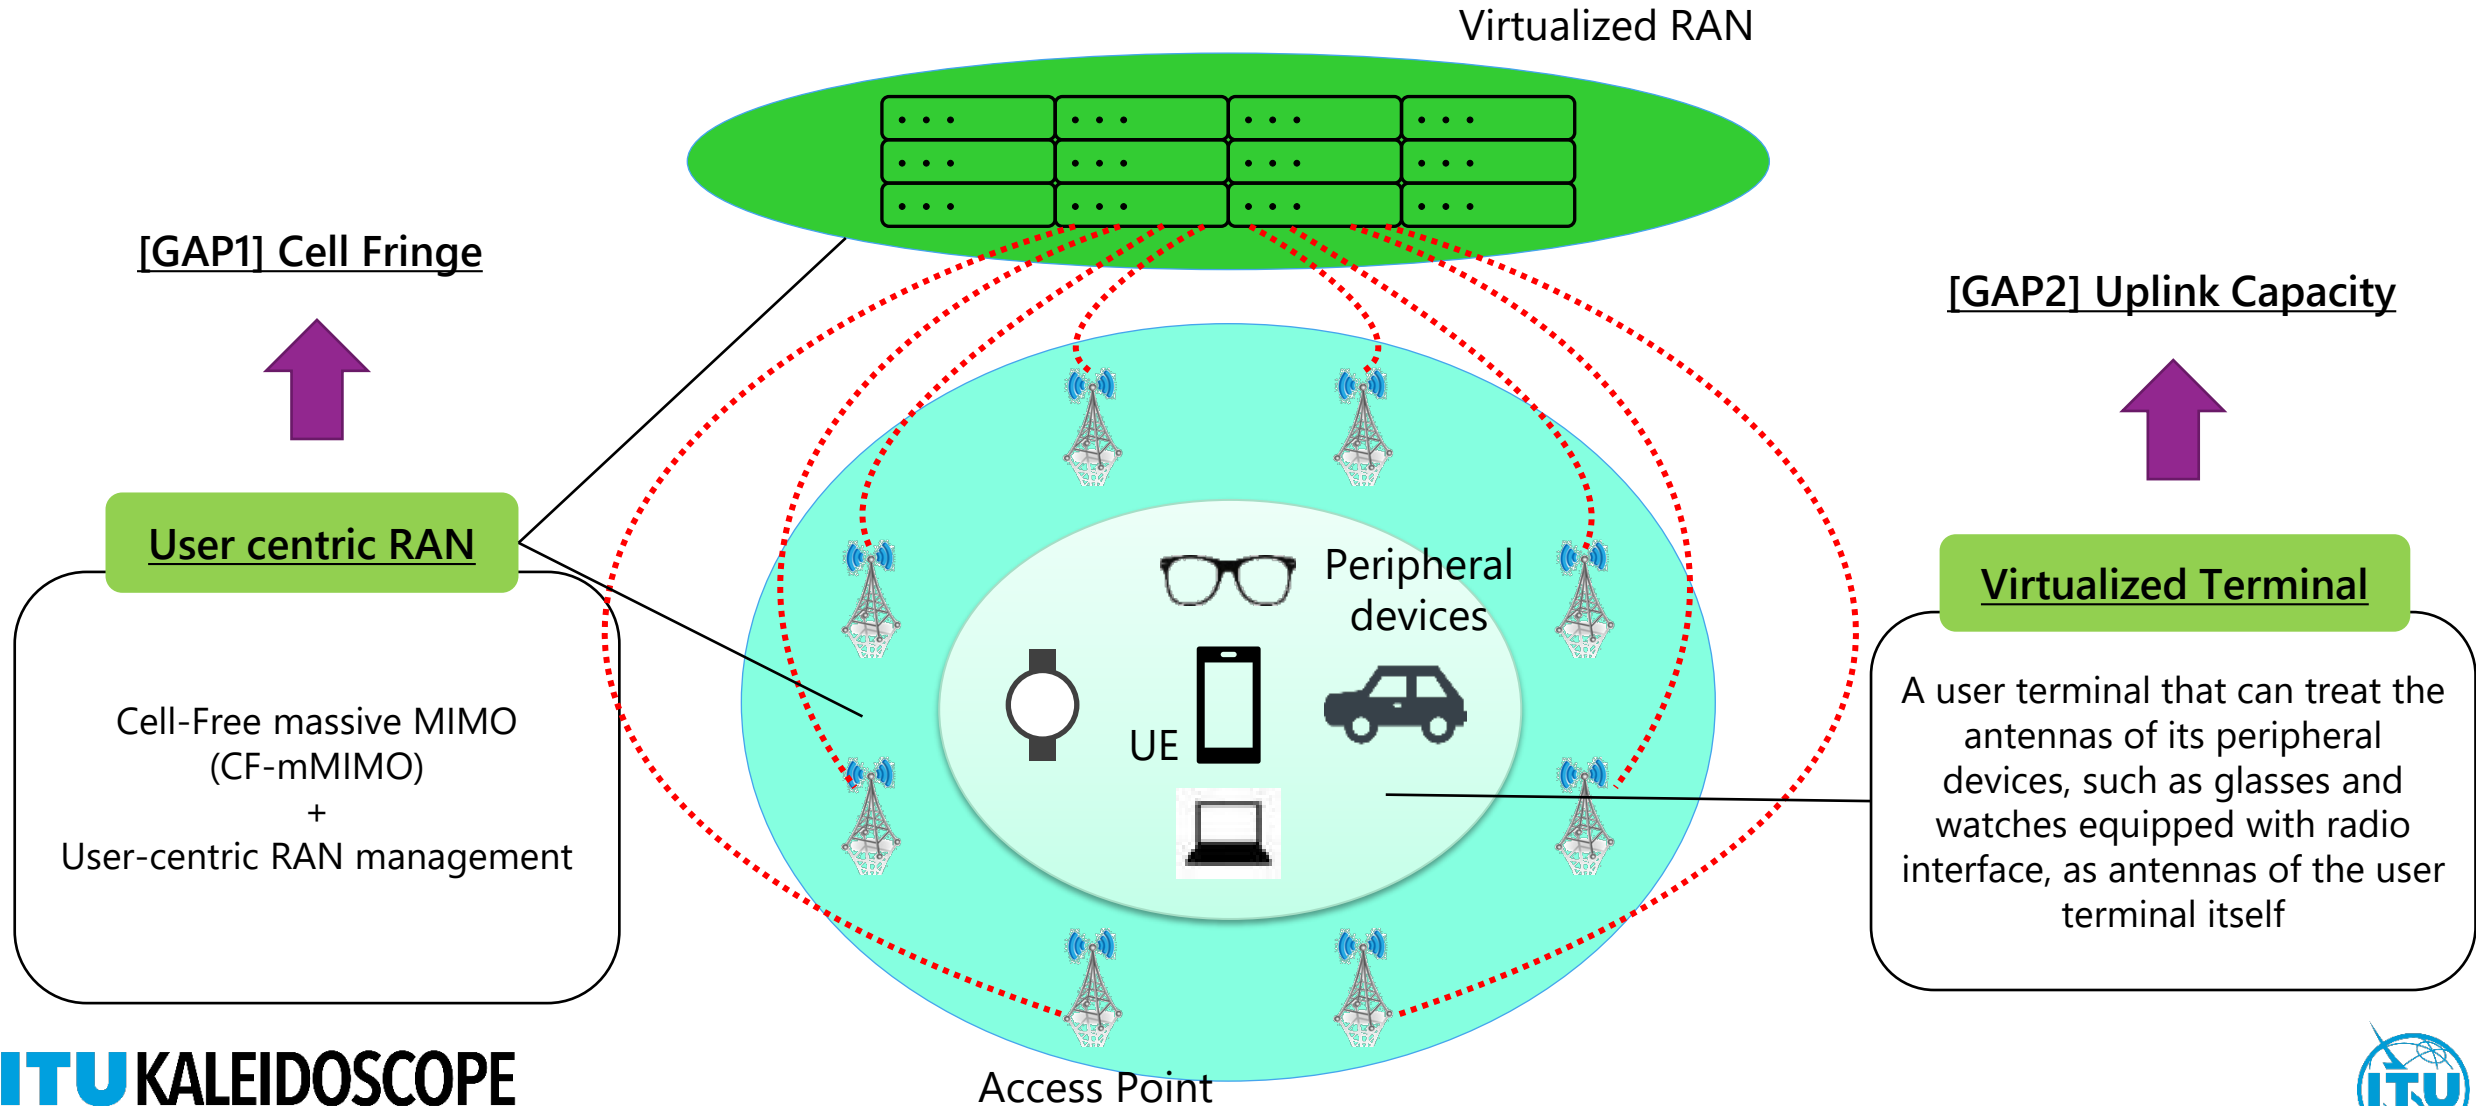

[GAP1] Cell Fringe

the radio coverage is determined by the location of base stations. In this case, the communication quality is greatly affected by the distance from the base station and the user's location, and it is not possible to provide high radio quality everywhere.

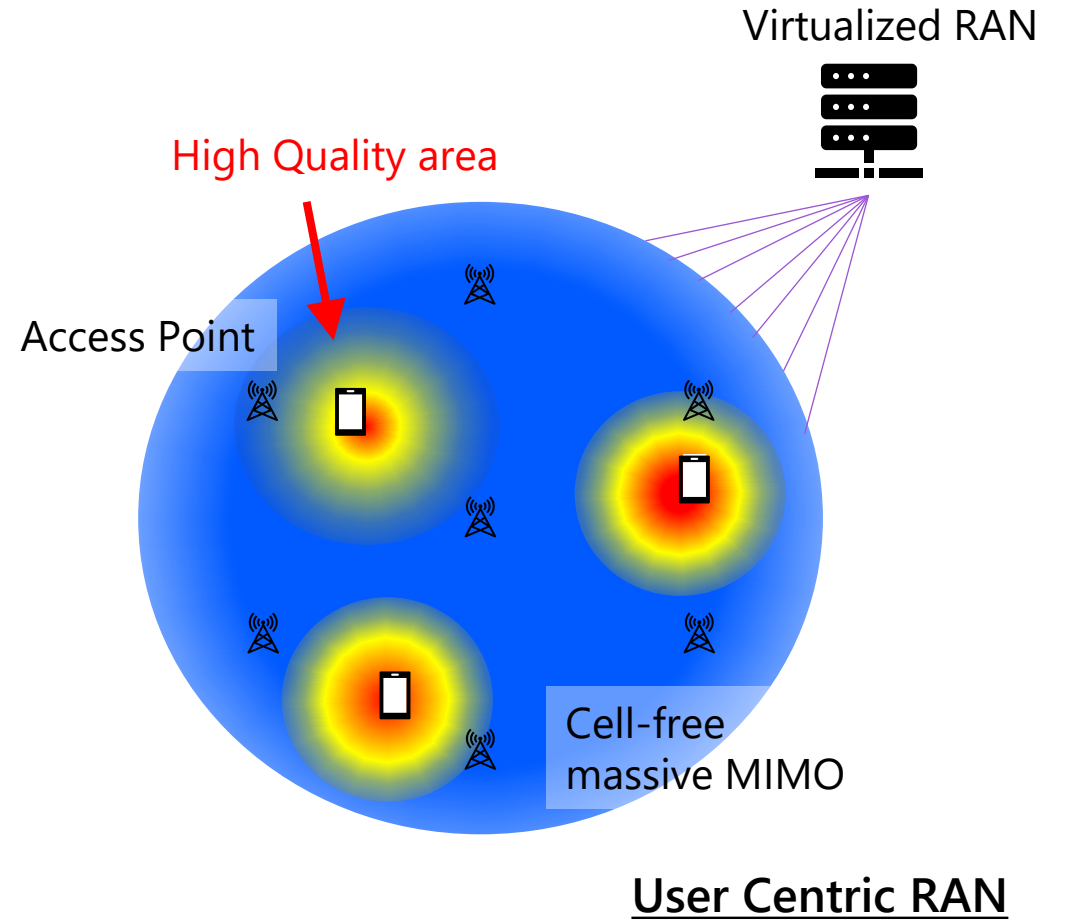

[GAP2] Uplink Capacity

5G mobile terminals have severe limitations in terms of size and power compared to base stations, which limits the number of antennas and transmission power that can be installed, and the quality of the uplink is greatly degraded compared to the downlink.

User Centric Architecture

User-centric RAN

Cell-Free massive MIMO (CFmMIMO)

Dense base station antenna
(AP: antenna port) deployment

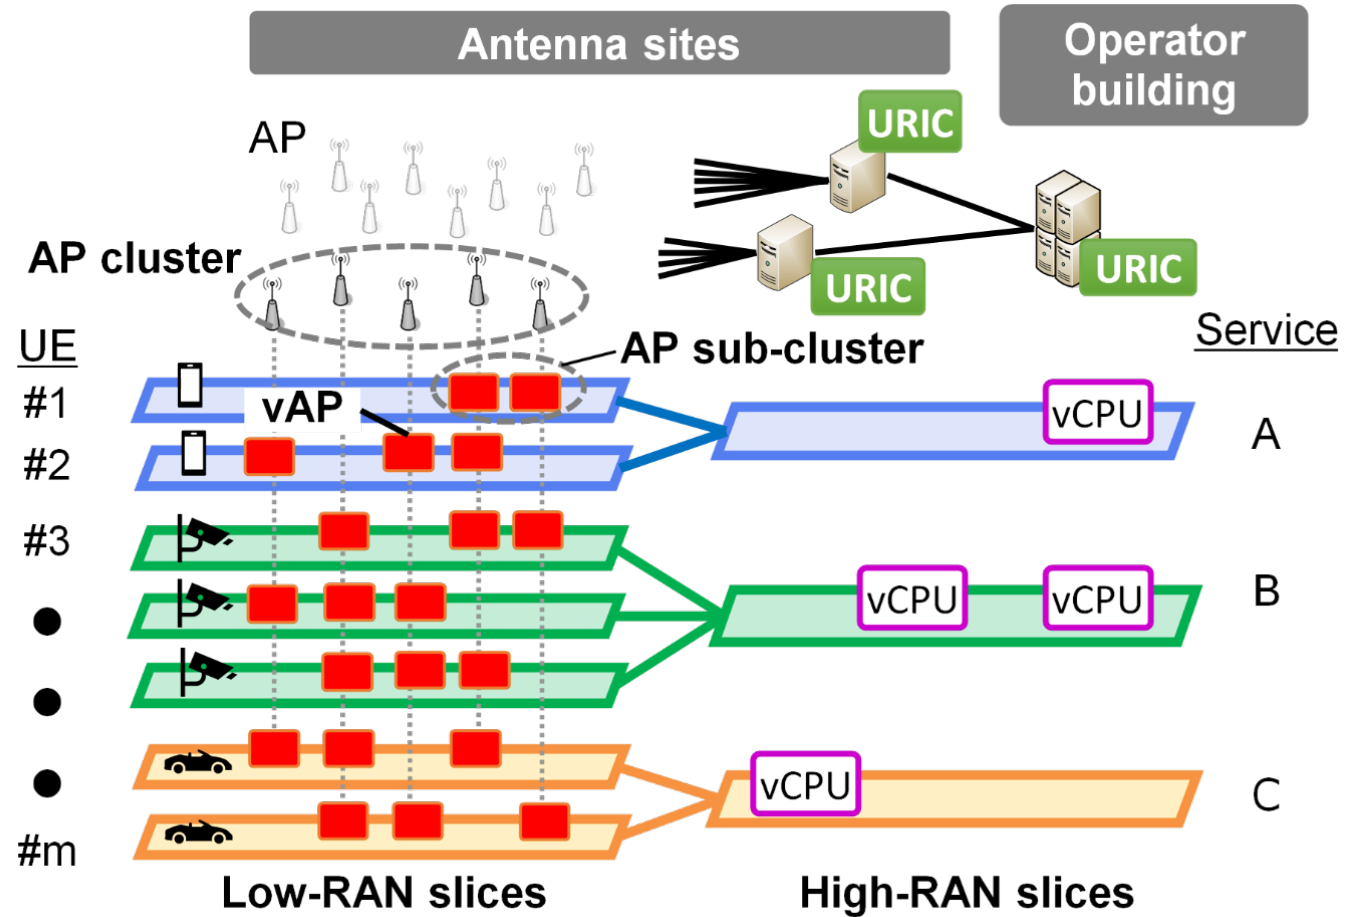

Configuration of AP clusters
for each user device

Suppressing interference between users and
eliminating cell boundaries using coordinated
signal processing by multiple APs

Base station (radio signal processing)

User-centric RAN structure

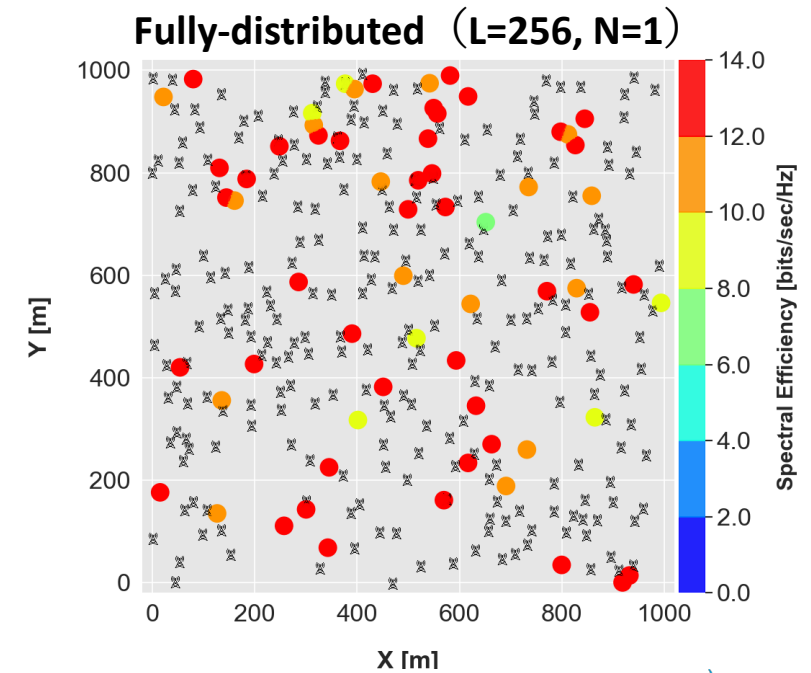

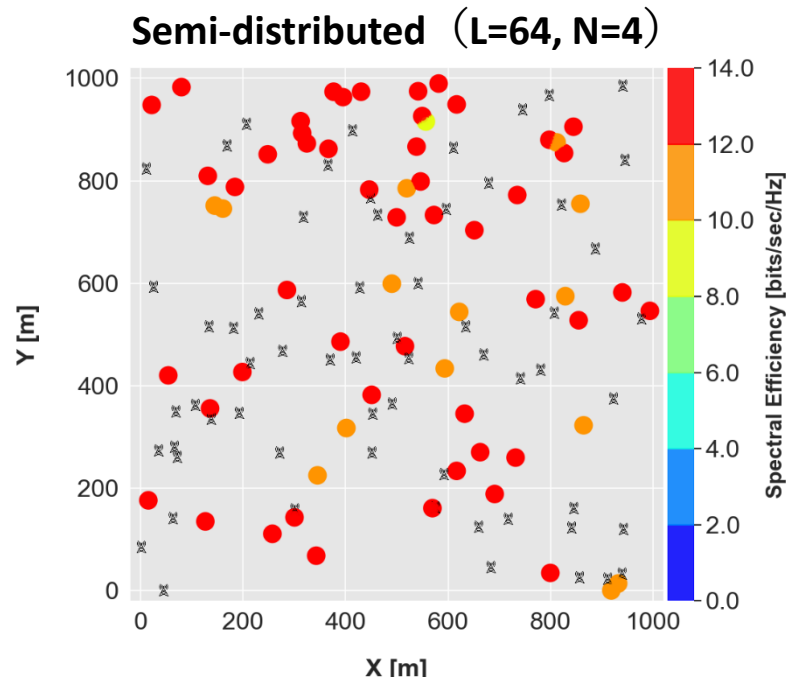

URIC : user-centric RIC

Initial Study for CFmMIMO

TYPE	VALUE
Carrier frequency	3.5 GHz
Bandwidth	20 MHz
Transmission power	23 dBm
Simulation area	1km square

TYPE	VALUE
Number of antennas	256 (Number of APs “L” x Number of antennas per AP “N”)
Number of users multiplexed	16
Signal detection	Zero Forcing
Channel estimation	Least Square Estimation

Virtualized terminal

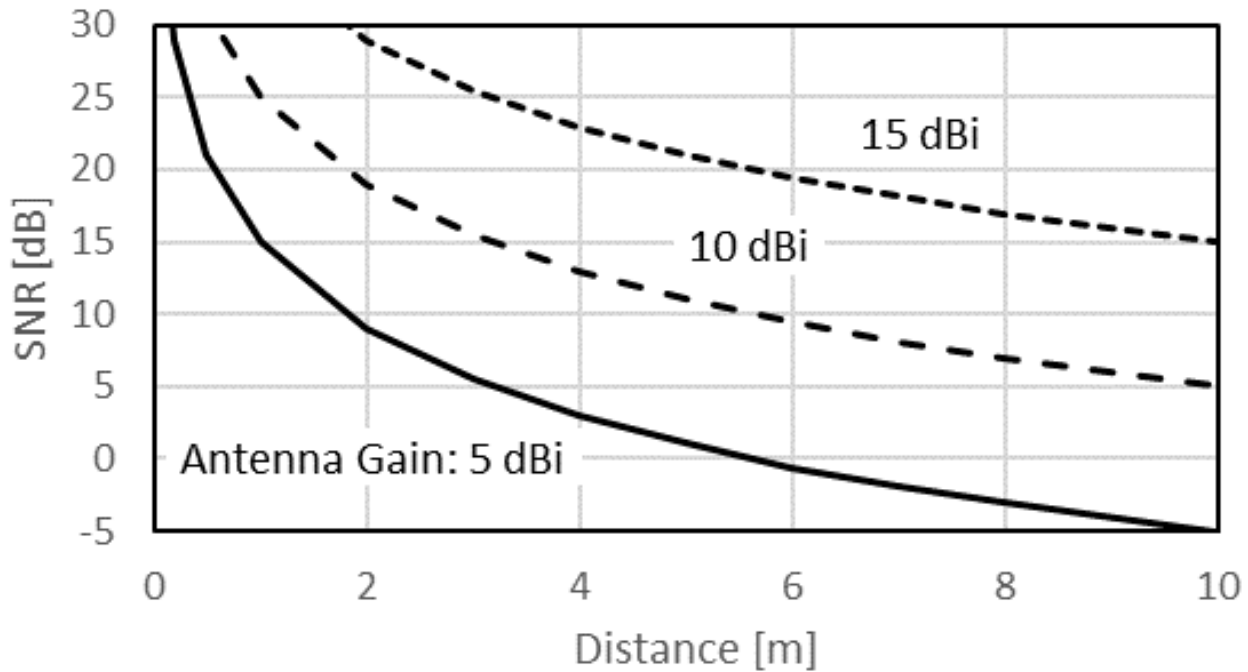

(Traditional) UE

Virtualized Terminal

Distance characteristics in the terahertz link

Parameter	Value
Carrier frequency	300 GHz
Bandwidth	5 GHz / Peripheral device
Tx power	10 dBm
Propagation Loss	Free-space path loss, Atmospheric and rain attenuation
Noise	Thermal noise (290 K)

Summary

- A new network architecture “User Centric Architecture” has been proposed
 - Cell-free massive MIMO
 - User-centric RAN management
 - Virtualized terminal
- As a next step
 - Feasibility study of above three technologies should be progressed toward 2030
